| RF-Parameters field descriptions |
|--|
| <i>appliedFreqBandListFilter</i>
In this field the UE mirrors the <i>FreqBandList</i> that the NW provided in the capability enquiry, if any, as described in clause 5.6.1.4. The UE filtered the band combinations in the <i>supportedBandCombinationList</i> in accordance with this <i>appliedFreqBandListFilter</i> . The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10]. |
| <i>dummy1, dummy2, dummy-ltm-MAC-CE-JointTCI-r18, dummy-ltm-MAC-CE-SeparateTCI-r18</i>
The fields are not used in the specification and the network ignores the received values. |
| <i>supportedBandCombinationList</i>
A list of band combinations that the UE supports for NR (and NR-DC, if requested). The <i>FeatureSetCombinationId</i> s in this list refer to the <i>FeatureSetCombination</i> entries in the <i>featureSetCombinations</i> list in the <i>UE-NR-Capability</i> IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10]. |
| <i>supportedBandCombinationListSidelinkEUTRA-NR</i>
A list of band combinations that the UE supports for NR sidelink communication only, for joint NR sidelink communication and V2X sidelink communication, or for V2X sidelink communication only. The UE does not include this field if the UE capability is requested by E-UTRAN (see TS 36.331[10]) and the network request includes the field <i>eutra-nr-only</i> . |
| <i>supportedBandCombinationListSL-NonRelayDiscovery</i>
A list of band combinations that the UE supports for NR sidelink non-relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i> . |
| <i>supportedBandCombinationListSL-RelayDiscovery</i>
A list of band combinations that the UE supports for NR sidelink relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i> . |
| <i>supportedBandCombinationListSL-U2U-DiscoveryExt</i>
This field indicates the band parameter in <i>BandCombinationListSL-Discovery-r17</i> that the UE supports for NR U2U sidelink relay discovery in a band included in <i>supportedBandCombinationListSL-U2U-RelayDiscovery</i> . |
| <i>supportedBandCombinationListSL-U2U-RelayDiscovery</i>
A list of band combinations that the UE supports for NR U2U sidelink relay discovery. The encoding is defined in PC5 <i>BandCombinationListSidelinkNR-r16</i> . |
| <i>supportedBandCombinationList-UplinkTxSwitch</i>
A list of band combinations that the UE supports dynamic uplink Tx switching for NR UL CA and SUL. The <i>FeatureSetCombinationId</i> s in this list refer to the <i>FeatureSetCombination</i> entries in the <i>featureSetCombinations</i> list in the <i>UE-NR-Capability</i> IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field <i>eutra-nr-only</i> [10]. |
| <i>supportedBandListNR</i>
A list of NR bands supported by the UE. If <i>supportedBandListNR-v16c0</i> is included, the UE shall include the same number of entries, and listed in the same order, as in <i>supportedBandListNR</i> (without suffix). |

```

| UE-CapabilityRequestFilterCommon field descriptions | |
|--|---|
| codebookTypeRequest | Only if this field is present, the UE includes <i>SupportedCSI-RS-Resource</i> supported for the codebook type(s) requested within this field (i.e. type I single/multi-panel, type II and type II port selection) into <i>codebookVariantsList</i> , <i>codebookParametersPerBand</i> and <i>codebookParametersPerBC</i> . If this field is present and none of the codebook types is requested within this field (i.e. empty field), the UE includes <i>SupportedCSI-RS-Resource</i> supported for all codebook types into <i>codebookVariantsList</i> , <i>codebookParametersPerBand</i> and <i>codebookParametersPerBC</i> . |
| fallbackGroupFiveRequest | Only if this field is present, the UE supporting FR2 CA bandwidth class from fallback group 5 shall include band combinations with FR2 CA bandwidth class from fallback group 5, and shall omit band combinations with FR2 CA bandwidth class from fallback group 2 or 3 (see TS 38.101-2 [39]) with same or lower capabilities. |
| includeNE-DC | Only if this field is present, the UE supporting NE-DC shall indicate support for NE-DC in band combinations and include feature set combinations which are applicable to NE-DC. Band combinations supporting both NE-DC and (NG)EN-DC shall be included in <i>supportedBandCombinationList</i> , band combinations supporting only NE-DC shall be included in <i>supportedBandCombinationListNEDC-Only</i> . |
| includeNR-DC | Only if this field is present, the UE supporting NR-DC shall indicate support for NR-DC in band combinations and include feature set combinations which are applicable to NR-DC. |
| lowerMSDRequest | Only if this field is present, the UE supporting lower MSD shall indicate the lower MSD capability for the requested power class if supported. If no power class is explicitly requested, the UE supporting lower MSD shall indicate the lower MSD capability for the highest supported power class of the band combination consisting of victim band and aggressor band(s). |
| mode | The mode of NR-DC operation that the NW is interested in for this cell grouping. The value <i>sync</i> means that the UE only indicates NR-DC support for band combinations for which it supports synchronous NR-DC with the requested cell grouping. The value <i>async</i> means that the UE only indicates NR-DC support for band combinations for which it supports asynchronous NR-DC with the requested cell grouping. |
| omitEN-DC | Only if this field is present, the UE shall omit band combinations and feature set combinations which are only applicable to (NG)EN-DC. |
| requestedCellGrouping | The NR-DC cell groupings that the NW is interested in, i.e., the bands that it might use in an MCG and the bands that it might use in an SCG. Only if this field is present, the UE indicates NR-DC support for band combinations for which it supports the requested cell grouping, i.e., in which it supports at least one of the <i>mcg</i> bands on MCG and at least one of the <i>scg</i> bands on the SCG. In its <i>supportedBandCombinationList</i> , the UE indicates which of its NR-DC band combinations supports which of the requested cell groupings. The first element in this list is referred to by ID#0, the second by ID#1 and so on. If this field is absent, the UE only includes band combinations for which it supports NR-DC with only FR1 bands in MCG and only FR2 bands in SCG.
Example 1: <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n41, n66] and <i>scg</i> =[n78, n261]. This assumes that the NW would always use CA among n1, n7, n41 and n66 (depending on which are deployed on a given site) whereas with n78 and/or n261 the NW may need to use DC. With this filter a UE may report a band combination n1A-n7A-n78A for NR-DC only if it supports that serving cells for n1 and n7 are in the MCG and a serving cell for n78 is in the SCG. The UE may also report a band combination n41C-n261M for NR-DC provided that it supports a serving cell for n41 in the MCG and a serving cell for n261 in the SCG.
Example 2: One <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n41, n66] and <i>scg</i> =[n78, n261] and another <i>requestedCellGrouping</i> is set to <i>mcg</i> =[n1, n7, n66] and <i>scg</i> =[n41, n78, n261]. This assumes that the NW uses sometimes CA among n1, n7, n41 and n66 (as in example 1) and sometimes CA among n1, n7 and n66 but DC towards one or several of n41, n78, n261. If a UE supports n1A-n41A-n78A only if n41A and n78A are in the same cell group, this UE may only indicate cell grouping ID#1 (not #0) in its BC. |
| uplinkTxSwitchRequest | Only if this field is present, the UE supporting dynamic UL Tx switching shall indicate support for UL Tx switching in band combinations which are applicable to inter-band UL CA, SUL and (NG)EN-DC. |

| Conditional Presence | Explanation |
|----------------------|--|
| NRDC | The field is optionally present, Need N, if <i>includeNR-DC</i> is included. It is absent otherwise. |

– *UE-CapabilityRequestFilterNR*

}

-- TAG-UE-RADIOPAGINGINFO-STOP
-- ASN1STOP

```

6.3.4 Other information elements

– *AbsoluteTimeInfo*

The IE *AbsoluteTimeInfo* indicates an absolute time in a format YY-MM-DD HH:MM:SS and using BCD encoding. The first/ leftmost bit of the bit string contains the most significant bit of the most significant digit of the year and so on.

***AbsoluteTimeInfo* information element**

```

-- ASN1START
-- TAG-ABSOLUTETIMEINFO-START

AbsoluteTimeInfo-r16 ::= BIT STRING (SIZE (48))

-- TAG-ABSOLUTETIMEINFO-STOP
-- ASN1STOP

```

– *AppLayerIdleInactiveConfig*

The IE *AppLayerIdleInactiveConfig* indicates parameters specific to application layer measurements applicable to RRC_IDLE and RRC_INACTIVE. The configured application layer measurement is also applicable to RRC_CONNECTED.

***AppLayerIdleInactiveConfig* information element**

```

-- ASN1START
-- TAG-APPLAYERIDLEINACTIVECONFIG-START

AppLayerIdleInactiveConfig-r18 ::= SEQUENCE {
    measConfigAppLayerId-r18      MeasConfigAppLayerId-r17,

    ...
}

-- TAG-APPLAYERIDLEINACTIVECONFIG-STOP
-- ASN1STOP

```

| AppLayerIdleInactiveConfig field descriptions |
|---|
| appLayerBufferLevelList
The field defines whether the buffer level for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE. |
| qoe-AreaScope
The field contains the area where the application layer measurement shall start if an application layer session starts. |
| qoe-MeasurementType
Indicates whether the application layer measurement is signalling based or management based. |
| qoe-Reference
Indicates the QoE Reference as defined in TS 28.405 [80], clause 5.2. |
| mce-id
The field contains the Measurement Collection Entity ID. |
| playoutDelayForMediaStartup
The field defines whether the playout delay for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE. |

– AppLayerMeasConfig

The IE AppLayerMeasConfig indicates configuration of application layer measurements.

AppLayerMeasConfig information element

```

-- ASN1START
-- TAG-APPLAYERMEASCONFIG-START

AppLayerMeasConfig-r17 ::= SEQUENCE {

```

| <i>AppLayerMeasConfig</i> field descriptions |
|--|
| <i>appLayerMeasPriority</i>
The field indicates the priority of the application layer measurement configuration, where a higher value indicates lower priority. If the field is not configured, the application layer measurement configuration has the lowest priority. |
| <i>idleInactiveReportAllowed</i>
The field indicates whether transmission of application layer measurement configurations and reports for application layer measurements applicable to RRC_IDLE and/or RRC_INACTIVE is allowed in the cell where the field is received. If the field is not configured, transmission of application layer measurement reports and configurations for RRC_IDLE/RRC_INACTIVE is not allowed. |
| <i>measConfigAppLayerContainer</i>
The field contains configuration of application layer measurements, see Annex L (normative) in TS 26.247 [68], clause 16.5 in TS 26.114 [69] and clause 9.4 in TS 26.118 [70]. |
| <i>measConfigAppLayerId</i>
The field contains the identity of the application layer measurements. When application layer measurements are configured for an SCG, the <i>measConfigAppLayerId</i> is obtained according to TS 38.423 [37], clauses 8.3.1 and 8.3.3. |
| <i>pauseReporting</i>
The field indicates whether the transmission of <i>measReportAppLayerContainer</i> is paused or not. Value <i>true</i> indicates the transmission of <i>measReportAppLayerContainer</i> is paused; value <i>false</i> indicates the transmission of <i>measReportAppLayerContainer</i> is not paused. |
| <i>ran-VisibleParameters</i>
The field indicates whether RAN visible application layer measurements shall be reported or not. |
| <i>ran-VisibleReportingSRB</i>
The field indicates the SRB to be used for transmission of RAN visible application layer measurement reports. |
| <i>reportingSRB</i>
The field indicates the SRB to be used for transmission of encapsulated application layer measurement reports. |
| <i>rrc-SegAllowedSRB4</i>
This field indicates that RRC segmentation of <i>MeasurementReportAppLayer</i> is enabled on SRB4. The field is only configured for an MCG. It may be present only if the UE supports RRC segmentation of the <i>MeasurementReportAppLayer</i> message. |
| <i>rrc-SegAllowedSRB5</i>
This field indicates that RRC segmentation of <i>MeasurementReportAppLayer</i> is enabled on SRB5. The field is only configured for an SCG. It may be present only if the UE supports RRC segmentation of the <i>MeasurementReportAppLayer</i> message. |
| <i>serviceType</i>
Indicates the type of application layer measurement. Value <i>streaming</i> indicates Quality of Experience Measurement Collection for streaming services (see TS 26.247 [68]), value <i>mtsi</i> indicates Quality of Experience Measurement Collection for MTSI (see TS 26.114 [69]) and value <i>vr</i> indicates Quality of Experience Measurement Collection for VR service (see TS 26.118 [70]). The network always configures <i>serviceType</i> when application layer measurements are initially configured and at <i>fullConfig</i> . |
| <i>transmissionOfSessionStartStop</i>
Value <i>true</i> indicates that the UE shall transmit indications when the measurement session in the application layer starts and stops. Value <i>false</i> indicates that the UE shall not transmit any session status indications. The UE transmits a session start indication upon configuration of this field set to value <i>true</i> if a session already has started in the application layer. |

| <i>RAN-VisibleParameters</i> field descriptions |
|---|
| <i>numberOfBufferLevelEntries</i>
The field contains the maximum number of buffer level entries that can be reported for RAN visible application layer measurements. This field is also used by application layer to calculate the interval of RAN visible buffer level measurement, which is equal to the periodicity of RAN visible application layer measurements reporting divided by <i>numberOfBufferLevelEntries</i> . |
| <i>ran-VisiblePeriodicity</i>
The field indicates the periodicity of RAN visible application layer measurements reporting. Value <i>ms120</i> indicates 120 ms, value <i>ms240</i> indicates 240 ms and so on. If this field is absent, the periodicity of RAN visible application layer measurements reporting is the same as the reporting periodicity indicated in <i>measConfigAppLayerContainer</i> . |
| <i>reportPlayoutDelayForMediaStartup</i>
The field indicates whether the UE shall report Playout Delay for Media Startup for RAN visible application layer measurements. |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>QoENRDC</i> | This field is optionally present, Need M, when QoE for an NR-DC configuration is configured, i.e. when either QoE for an SCG is configured or when SRB5 is configured. Otherwise, it is absent. |
| <i>ServiceType</i> | This field is optionally present, Need M, when <i>serviceType</i> is set to <i>streaming</i> or <i>vr</i> . Otherwise, it is absent. |

– *AreaConfiguration*

The *AreaConfiguration* indicates area for which UE is requested to perform measurement logging. If not configured, measurement logging is not restricted to specific cells or tracking areas but applies as long as the RPLMN is contained in *plmn-IdentityList* stored in *VarLogMeasReport* or the registered SNPN identity is included in *snpn-ConfigID-List* stored in *VarLogMeasReport*.

AreaConfiguration information element

```
-- ASN1START
-- TAG-AREACONFIGURATION-START

AreaConfiguration-r16 ::=          SEQUENCE {
    areaConfig-r16                AreaConfig-r16,
    interFreqTargetList-r16       SEQUENCE (SIZE (1..maxFreq)) OF InterFreqTargetInfo-r16      OPTIONAL  -- Need R
}

AreaConfiguration-r17 ::=          SEQUENCE {
    areaConfig-r17                AreaConfig-r16                                           OPTIONAL, -- Need R

SNPN-ConfigCellId-r18 ::= SEQUENCE {
    cgi-Identity-r18      CGI-Info-Logging-r16,
    nid-IdentityList-r18    SEQUENCE (SIZE (1..maxNPN-r16)) OF NID-r16
}

SNPN-ConfigTAI-List-r18 ::= SEQUENCE (SIZE (1..maxSNPN-ConfigTAI-r18)) OF SNPN-ConfigTAI-r18

SNPN-ConfigTAI-r18 ::= SEQUENCE {
    tai-Identity-r18      TrackingAreaIdentity-r16,
    nid-IdentityList-r18    SEQUENCE (SIZE (1..maxNPN-r16)) OF NID-r16
}

SNPN-ConfigID-List-r18 ::= SEQUENCE (SIZE (1..maxSNPN-ConfigID-r18)) OF SNPN-ConfigID-r18

SNPN-ConfigID-r18 ::= SEQUENCE {

```

```
    plmn-Identity-r18          PLMN-Identity,
    nid-IdentityList-r18      SEQUENCE (SIZE (1..maxNPN-r16)) OF NID-r16
}

-- TAG-AREACONFIGURATION-STOP
-- ASN1STOP
```

| AreaConfiguration field descriptions |
|---|
| cag-IdentityList
The <i>cag-IdentityList</i> contains one or more CAG IDs. A PLMN ID may be present more than once within <i>CAG-ConfigList</i> . |
| InterFreqTargetInfo
If configured, it indicates the neighbouring frequency and cells for which UE is requested to perform measurement logging. It can include sync raster or non-sync raster frequencies. |
| nid-IdentityList
The <i>nid-IdentityList</i> contains one or more NID. All NIDs associated to the same PLMN ID are listed in the same <i>nid-IdentityList</i> entry. |

– *BT-NameList*

The IE *BT-NameList* is used to indicate the names of the Bluetooth beacon which the UE is configured to measure.

***BT-NameList* information element**

```
-- ASN1START
-- TAG-BTNAMELIST-START

BT-NameList-r16 ::=
    SEQUENCE (SIZE (1..maxBT-Name-r16)) OF BT-Name-r16

BT-Name-r16 ::=
    OCTET STRING (SIZE (1..248))

-- TAG-BTNAMELIST-STOP
-- ASN1STOP
```

| BT-NameList field descriptions |
|---|
| bt-Name
If configured, the UE only performs Bluetooth measurements according to the names identified. For each name, it refers to LOCAL NAME defined in Bluetooth specification [51]. |

– *DedicatedInfoF1c*

The IE *DedicatedInfoF1c* is used to transfer IAB-DU specific F1-C related information between the network and the IAB node. The carried information consists of F1AP message encapsulated in SCTP/IP or F1-C related (SCTP)/IP packet, see TS 38.472 [64]. The RRC layer is transparent for this information.

***DedicatedInfoF1c* information element**

```
-- ASN1START
-- TAG-DEDICATEDINFOF1C-START

DedicatedInfoF1c-r17 ::=          OCTET STRING

-- TAG-DEDICATEDINFOF1C-STOP
-- ASN1STOP
```

– ***EUTRA-AllowedMeasBandwidth***

The IE *EUTRA-AllowedMeasBandwidth* is used to indicate the maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "N_{RB}" in TS 36.104 [33]. The values *mbw6*, *mbw15*, *mbw25*, *mbw50*, *mbw75*, *mbw100* indicate 6, 15, 25, 50, 75 and 100 resource blocks, respectively.

***EUTRA-AllowedMeasBandwidth* information element**

```
-- ASN1START
-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-START

EUTRA-AllowedMeasBandwidth ::=          ENUMERATED {mbw6, mbw15, mbw25, mbw50, mbw75, mbw100}

-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-STOP
-- ASN1STOP
```

– ***EUTRA-MBSFN-SubframeConfigList***

The IE *EUTRA-MBSFN-SubframeConfigList* is used to define an E-UTRA MBSFN subframe pattern (for the purpose of NR rate matching).

***EUTRA-MBSFN-SubframeConfigList* information element**

```
-- ASN1START
-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-START

EUTRA-MBSFN-SubframeConfigList ::= SEQUENCE (SIZE (1..maxMBSFN-Allocations)) OF EUTRA-MBSFN-SubframeConfig

EUTRA-MBSFN-SubframeConfig ::= SEQUENCE {
    radioframeAllocationPeriod      ENUMERATED {n1, n2, n4, n8, n16, n32},
    radioframeAllocationOffset      INTEGER (0..7),
    subframeAllocation1             CHOICE {
        oneFrame                   BIT STRING (SIZE(6)),
        fourFrames                 BIT STRING (SIZE(24))
    },
    subframeAllocation2             CHOICE {
        oneFrame                   BIT STRING (SIZE(2)),
        fourFrames                 BIT STRING (SIZE(8))
    }
}
```

```
    }
    ...
}

-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-STOP
-- ASN1STOP
```

| EUTRA-MBSFN-SubframeConfig field descriptions |
|---|
| radioframeAllocationOffset
Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10]. |
| radioframeAllocationPeriod
Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10], where <i>SFN</i> refers to the SFN of the NR serving cell. |
| subframeAllocation1
Field as defined in <i>MBSFN-SubframeConfig</i> in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the <i>E-UTRA-MBSFN-SubframeConfig</i> is provided. |
| subframeAllocation2
Field as defined in <i>MBSFN-SubframeConfig-v1430</i> in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the <i>E-UTRA-MBSFN-SubframeConfig</i> is provided. |

– EUTRA-MultiBandInfoList

The IE *EUTRA-MultiBandInfoList* indicates the list of frequency bands in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

EUTRA-MultiBandInfoList information element

```
-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLIST-START

EUTRA-MultiBandInfoList ::= SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfo

EUTRA-MultiBandInfo ::= SEQUENCE {
    eutra-FreqBandIndicator    FreqBandIndicatorEUTRA,
    eutra-NS-PmaxList          EUTRA-NS-PmaxList OPTIONAL -- Need R
}

-- TAG-EUTRA-MULTIBANDINFOLIST-STOP
-- ASN1STOP
```

– EUTRA-MultiBandInfoListAerial

The IE *EUTRA-MultiBandInfoListAerial* indicates the list of frequency bands for aerial UE in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

***EUTRA-MultiBandInfoListAerial* information element**

```

-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-START

EUTRA-MultiBandInfoListAerial-r18 ::=      SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfoAerial-r18

EUTRA-MultiBandInfoAerial-r18 ::=          SEQUENCE {
    eutra-FreqBandIndicator-r18             FreqBandIndicatorEUTRA,
    eutra-NS-PmaxListAerial-r18             EUTRA-NS-PmaxList             OPTIONAL    -- Need R
}

-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-STOP
-- ASN1STOP

```

– *EUTRA-NS-PmaxList*

The IE *EUTRA-NS-PmaxList* concerns a list of *additionalPmax* and *additionalSpectrumEmission*, as defined in TS 36.101 [22], clause 6, for a given frequency band.

***EUTRA-NS-PmaxList* information element**

```

-- ASN1START
-- TAG-EUTRA-NS-PMAXLIST-START

EUTRA-NS-PmaxList ::=                      SEQUENCE (SIZE (1..maxEUTRA-NS-Pmax)) OF EUTRA-NS-PmaxValue

EUTRA-NS-PmaxValue ::=                    SEQUENCE {
    additionalPmax                         INTEGER (-30..33)             OPTIONAL,    -- Need R
    additionalSpectrumEmission             INTEGER (1..288)             OPTIONAL    -- Need R
}

-- TAG-EUTRA-NS-PMAXLIST-STOP
-- ASN1STOP

```

– *EUTRA-PhysCellId*

The IE *EUTRA-PhysCellId* is used to indicate the physical layer identity of the cell, as defined in TS 36.211 [31].

***EUTRA-PhysCellId* information element**

```

-- ASN1START
-- TAG-EUTRA-PHYSCELLID-START

EUTRA-PhysCellId ::=                      INTEGER (0..503)

-- TAG-EUTRA-PHYSCELLID-STOP

```

```
-- ASN1STOP
```

– *EUTRA-PhysCellIdRange*

The IE *EUTRA-PhysCellIdRange* is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of *EUTRA-PhysCellIdRange*, NW may configure overlapping ranges of physical cell identities.

EUTRA-PhysCellIdRange information element

```
-- ASN1START
-- TAG-EUTRA-PHYSCCELLIDRANGE-START

EUTRA-PhysCellIdRange ::=          SEQUENCE {
    start                EUTRA-PhysCellId,
    range                ENUMERATED {n4, n8, n12, n16, n24, n32, n48, n64, n84, n96,
                                     n128, n168, n252, n504, spare2, spare1}
}
-- TAG-EUTRA-PHYSCCELLIDRANGE-STOP
-- ASN1STOP
```

OPTIONAL -- Need N

– *EUTRA-PresenceAntennaPort1*

The IE *EUTRA-PresenceAntennaPort1* is used to indicate whether all the neighbouring cells use Antenna Port 1. When set to *true*, the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.

EUTRA-PresenceAntennaPort1 information element

```
-- ASN1START
-- TAG-EUTRA-PRESENCEANTENNAPORT1-START

EUTRA-PresenceAntennaPort1 ::=          BOOLEAN

-- TAG-EUTRA-PRESENCEANTENNAPORT1-STOP
-- ASN1STOP
```

– *EUTRA-Q-OffsetRange*

The IE *EUTRA-Q-OffsetRange* is used to indicate a cell, or frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

EUTRA-Q-OffsetRange information element

```
-- ASN1START
-- TAG-EUTRA-Q-OFFSETRANGE-START

EUTRA-Q-OffsetRange ::=
    ENUMERATED {
        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
        dB20, dB22, dB24}

-- TAG-EUTRA-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

– IAB-IP-Address

The IE *IAB-IP-Address* is used to indicate the IP address/prefix.

IAB-IP-Address information element

```
-- ASN1START
-- TAG-IABIPADDRESS-START

IAB-IP-Address-r16 ::= CHOICE {
    IPv4-Address-r16          BIT STRING (SIZE(32)),
    IPv6-Address-r16          BIT STRING (SIZE(128)),
    IPv6-Prefix-r16           BIT STRING (SIZE(64)),
    ...
}

-- TAG-IABIPADDRESS-STOP
-- ASN1STOP
```

| IAB-IP-Address field descriptions | |
|-----------------------------------|---|
| IPv4-Address | This field is used to provide the allocated IPv4 address. |
| IPv6-Address | This field is used to provide the allocated IPv6 address. |
| IPv6-Prefix | This field is used to provide the allocated IPv6 prefix. |

– *IAB-IP-AddressIndex*

The IE *IAB-IP-AddressIndex* is used to identify a configuration of an IP address.

***IAB-IP-AddressIndex* information element**

```
-- ASN1START
-- TAG-IABIPADDRESSINDEX-START

IAB-IP-AddressIndex-r16 ::= INTEGER (1..maxIAB-IP-Address-r16)

-- TAG-IABIPADDRESSINDEX-STOP
-- ASN1STOP
```

– *IAB-IP-Usage*

The IE *IAB-IP-Usage* is used to indicate the usage of the assigned IP address/prefix.

***IAB-IP-Usage* information element**

```
-- ASN1START
-- TAG-IAB-IP-USAGE-START

IAB-IP-Usage-r16 ::= ENUMERATED {f1-C, f1-U, non-F1, spare}

-- TAG-IAB-IP-USAGE-STOP
-- ASN1STOP
```

– *LoggingDuration*

The *LoggingDuration* indicates the duration for which UE is requested to perform measurement logging. Value min10 corresponds to 10 minutes, value min20 corresponds to 20 minutes and so on.

***LoggingDuration* information element**

```
-- ASN1START
-- TAG-LOGGINGDURATION-START

LoggingDuration-r16 ::= ENUMERATED {
    min10, min20, min40, min60, min90, min120, spare2, spare1}

-- TAG-LOGGINGDURATION-STOP
-- ASN1STOP
```

– *LoggingInterval*

The *LoggingInterval* indicates the periodicity for logging measurement results. Value ms1280 corresponds to 1.28s, value ms2560 corresponds to 2.56s and so on. Value infinity means it is equal to the configured value of the *LoggingDuration* IE.

***LoggingInterval* information element**

```
-- ASN1START
-- TAG-LOGGINGINTERVAL-START

LoggingInterval-r16 ::= ENUMERATED {
    ms320, ms640, ms1280, ms2560, ms5120, ms10240, ms20480,
    ms30720, ms40960, ms61440 , infinity}

-- TAG-LOGGINGINTERVAL-STOP
-- ASN1STOP
```

– *LogMeasResultListBT*

The IE *LogMeasResultListBT* covers measured results for Bluetooth.

***LogMeasResultListBT* information element**

```
-- ASN1START
-- TAG-LOGMEASRESULTLISTBT-START

LogMeasResultListBT-r16 ::= SEQUENCE (SIZE (1..maxBT-IdReport-r16)) OF LogMeasResultBT-r16

LogMeasResultBT-r16 ::= SEQUENCE {
    bt-Addr-r16          BIT STRING (SIZE (48)),
    rssi-BT-r16          INTEGER (-128..127)      OPTIONAL,
    ...
}

-- TAG-LOGMEASRESULTLISTBT-STOP
-- ASN1STOP
```

| <i>LogMeasResultListBT</i> field descriptions | |
|---|---|
| <i>bt-Addr</i> | This field indicates the Bluetooth public address of the Bluetooth beacon as defined in TS 37.355 [49]. |
| <i>rssi-BT</i> | This field provides the beacon received signal strength indicator (RSSI) in dBm as defined in TS 37.355 [49]. |

– *LogMeasResultListWLAN*

The IE *LogMeasResultListWLAN* covers measured results for WLAN.

***LogMeasResultListWLAN* information element**

```
-- ASN1START
-- TAG-LOGMEASRESULTLISTWLAN-START

LogMeasResultListWLAN-r16 ::= SEQUENCE (SIZE (1..maxWLAN-Id-Report-r16)) OF LogMeasResultWLAN-r16

LogMeasResultWLAN-r16 ::= SEQUENCE {
    wlan-Identifiers-r16      WLAN-Identifiers-r16,
    rssiWLAN-r16              WLAN-RSSI-Range-r16          OPTIONAL,
    rtt-WLAN-r16              WLAN-RTT-r16                  OPTIONAL,
    ...
}

WLAN-Identifiers-r16 ::= SEQUENCE {
    ssid-r16                  OCTET STRING (SIZE (1..32))  OPTIONAL,
    bssid-r16                 OCTET STRING (SIZE (6))       OPTIONAL,
    hessid-r16                OCTET STRING (SIZE (6))       OPTIONAL,
    ...
}

WLAN-RSSI-Range-r16 ::= INTEGER (0..141)

WLAN-RTT-r16 ::= SEQUENCE {
    rttValue-r16              INTEGER (0..16777215),
    rttUnits-r16              ENUMERATED {
        microseconds,
        hundredsofnanoseconds,

| LogMeasResultListWLAN field descriptions |
|--|
| bssid
Basic Service Set Identifier (BSSID) defined in IEEE 802.11-2012 [50]. |

| LogMeasResultListWLAN field descriptions |
|--|
| hessid
Homogenous Extended Service Set Identifier (HESSID) defined in IEEE 802.11-2012 [50]. |
| rssiWLAN
Measured WLAN RSSI result in dBm. The IE WLAN-RSSI-Range specifies the value range used in WLAN RSSI measurements and thresholds. Integer value for WLAN RSSI measurements is according to mapping table in TS 36.133 [40]. Value 0 corresponds to -infinity, value 1 to -100dBm, value 2 to -99dBm, and so on (i.e. in steps of 1dBm) until value 140, which corresponds to 39dBm, while value 141 corresponds to +infinity. |
| rtt-WLAN
This field provides the measured roundtrip time between the target device and WLAN AP and optionally the accuracy expressed as the standard deviation of the delay. Units for each of these are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49]. |
| rttValue
This field specifies the Round Trip Time (RTT) measurement between the target device and WLAN AP in units given by the field rttUnits as defined in TS 37.355 [49]. |
| rttUnits
This field specifies the Units for the fields rttValue and rttAccuracy. The available Units are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49]. |
| rttAccuracy
This field provides the estimated accuracy of the provided rttValue expressed as the standard deviation in units given by the field rttUnits as defined in TS 37.355 [49]. |
| ssid
Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50]. |
| wlan-Identifiers
Indicates the WLAN parameters used for identification of the WLAN for which the measurement results are applicable. |

– *MeasConfigAppLayerId*

The IE *MeasConfigAppLayerId* identifies the application layer measurement.

MeasConfigAppLayerId information element

```

```

| <i>OtherConfig</i> field descriptions |
|---|
| <i>aerial-FlightPathAvailabilityConfig</i>
Configuration for the UE to indicate the availability of flight path information for Aerial UE operation. |
| <i>applicabilityConfigCellId</i>
Indicates the serving cell that the <i>applicabilitySetConfigCSI-List</i> refers to. |
| <i>applicabilityReportConfig</i>
Configuration for the UE to indicate the applicability of configurations subject to the applicability determination procedure. |
| <i>applicabilitySetConfigId</i>
Indicates the ID of a set of prediction related parameters. |
| <i>applicabilitySetConfigCSI-ToAddModList</i>
Indicates for each serving cell the list of sets of prediction related parameters configured for UE applicability reporting. |
| <i>bfd-RelaxationReportingConfig</i>
Configuration for the UE to report the relaxation state of BFD measurements. |
| <i>btNameList</i>
Configuration for the UE to report measurements from specific Bluetooth beacons. NG-RAN configures the field if <i>includeBT-Meas</i> is configured for one or more measurements. |
| <i>candidateBandwidth</i>
Indicates the bandwidth of the candidate frequency range around the center frequency. |
| <i>candidateCenterFreq</i>
Indicates the center frequency of the candidate frequency range. |
| <i>candidateServingFreqListNR</i>
Indicates for each candidate NR serving cells, the center frequency around which UE is requested to report IDC issues. |
| <i>candidateServingFreqRangeListNR</i>
Indicates the candidate frequency range with the combination of the center frequency and the candidate bandwidth, around which the UE is requested to report IDC issues. |
| <i>closestLocsToReport</i>
Indicates the number of closest reference locations the UE should indicate for assisted SMTC and measurement gap configuration in RRC_CONNECTED state. |
| <i>codebookConfig</i>
Codebook configuration. If this field is included, its <i>codebookType</i> can only be set to <i>typell-Doppler-r18</i> . |
| <i>connectedReporting</i>
Indicates that the UE can report a preference to remain in RRC_CONNECTED state following a report to leave RRC_CONNECTED state. If absent, the UE cannot report a preference to stay in RRC_CONNECTED state. |
| <i>dataCollectionCandidateConfigId</i>
Indicates the ID of a candidate configuration for UE-side data collection. |
| <i>dataCollectionCandidateConfigToAddModList</i>
Indicates for each serving cell the list of candidate radio resources configured for UE-side data collection. The UE is not expected to perform measurements solely based on the configurations provided by this IE. |
| <i>dataCollectionPreferenceConfig</i>
Configuration for the UE to report its preference to be configured with radio resources for UE-side data collection. |
| <i>dataCollectionServCellIndex</i>
Index of the serving cell that the <i>dataCollectionCandidateConfigParameterList</i> refers to. |
| <i>delayBudgetReportingProhibitTimer</i>
Prohibit timer for delay budget reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot4</i> means prohibit timer is set to 0.4 seconds, and so on. |

| |
|--|
| <p>disableApplicabilityCSI-ReportConfig
 If present, the UE does not report the applicability for configured <i>reportConfigId</i> associated to a <i>CSI-ReportConfig</i> including <i>configurationForBM-PredictionAndDataCollection</i> with <i>reportQuantity-r19</i> set to <i>p-CRI-r19</i> or <i>p-SSB-Index-r19</i> or <i>p-CRI-RSRP-r19</i> or <i>p-SSB-Index-RSRP-r19</i>.
 NOTE: The network implementation is expected to ensure that the UE is able to report applicability updates for the configured <i>reportConfigId</i> associated to a <i>CSI-ReportConfig</i> including <i>configurationForBM-PredictionAndDataCollection</i> with <i>reportQuantity-r19</i> set to <i>p-CRI-r19</i> or <i>p-SSB-Index-r19</i> or <i>p-CRI-RSRP-r19</i> or <i>p-SSB-Index-RSRP-r19</i>.</p> |
| <p>drx-PreferenceConfig
 Configuration for the UE to report assistance information to inform the gNB about the UE's DRX preferences for power saving.</p> |
| <p>drx-PreferenceProhibitTimer
 Prohibit timer for DRX preferences assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.</p> |
| <p>fb-PreferenceReportingConfig
 Configuration for the UE to report its preference on L3 fast beam sweeping operation. Network only configures this field when the UE is configured with <i>fb-Config</i>.</p> |
| <p>fb-PreferenceReportingConfigProhibitTimer
 Prohibit timer for UE preference reporting on L3 fast beam sweeping operation. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.</p> |
| <p>gapOccasionCancelRatioProhibitTimer
 Prohibit timer for transmitting the assistance information of gap occasion cancellation ratio. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.</p> |
| <p>gapOccasionCancelRatioReportConfig
 Configuration for the UE to report preference for gap occasion cancellation ratio.</p> |
| <p>idc-AssistanceConfig
 Configuration for the UE to report assistance information to inform the gNB about UE detected IDC problem.</p> |
| <p>loggedDataCollectionAssistanceConfig
 Configuration for the UE to report assistance information related to logging of radio measurements for network-side data collection. When configured with <i>loggedDataCollectionAssistanceConfig</i> the UE reports that it has logged radio measurements for network-side data collection when the memory reserved for logging of radio measurements for network-side data collection has become full and it reports when it determines that it has entered a low power state.</p> |
| <p>loggedDataCollectionMemoryThreshold
 Memory threshold for the UE to report that it has logged radio measurements for network-side data collection, if the amount of data in the memory reserved for logging of radio measurements for network-side data collection has become equal to or above this threshold. Value <i>kB16</i> means the threshold is set to 16 kB and so on.</p> |
| <p>lpwus-OffsetPreferenceConfig
 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred time offset for LP-WUS monitoring for RRC_CONNECTED mode.</p> |
| <p>lpwus-OffsetPreferenceProhibitTimer
 Prohibit timer for offset preferences assistance information reporting for LP-WUS monitoring. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.</p> |
| <p>maxBW-PreferenceConfig
 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving.</p> |
| <p>maxBW-PreferenceProhibitTimer
 Prohibit timer for preferred bandwidth assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on.</p> |
| <p>maxCC-PreferenceConfig
 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of carriers for power saving.</p> |
| <p>maxBW-PreferenceConfigFR2-2
 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving for FR2-2.</p> |

| |
|---|
| <i>maxCC-PreferenceProhibitTimer</i> |
| Prohibit timer for preferred number of carriers assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| <i>maxMIMO-LayerPreferenceConfig</i> |
| Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving. |
| <i>maxMIMO-LayerPreferenceConfigFR2-2</i> |
| Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving for FR2-2. |
| <i>maxMIMO-LayerPreferenceProhibitTimer</i> |
| Prohibit timer for preferred number of number of MIMO layers assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| <i>minSchedulingOffsetPreferenceConfig</i> |
| Configuration for the UE to report assistance information to inform the gNB about the UE's preferred <i>minimumSchedulingOffset</i> value for cross-slot scheduling for power saving. |
| <i>minSchedulingOffsetPreferenceConfigExt</i> |
| Configuration for the UE to report assistance information to inform the gNB about the UE's preferred <i>minimumSchedulingOffset</i> value for cross-slot scheduling for power saving for SCS 480 kHz and/or 960 kHz. |
| <i>minSchedulingOffsetPreferenceProhibitTimer</i> |
| Prohibit timer for preferred <i>minimumSchedulingOffset</i> assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| <i>multiRx-PreferenceReportingConfigFR2</i> |
| Configuration for the UE to report assistance information to inform gNB about the UE's preference on multi-Rx operation for FR2. |
| <i>multiRx-PreferenceReportingConfigFR2ProhibitTimer</i> |
| Prohibit timer for multi-Rx operation preference reporting for FR2. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| <i>musim-CandidateBandList</i> |
| A list of candidate bands that the network intends to use, e.g., for serving cells and for which the UE is requested to provide information on temporary restricted capabilities for MUSIM operation as specified in clause 5.7.4.3. |
| <i>musim-GapAssistanceConfig</i> |
| Configuration for the UE to report assistance information for gap preference. |
| <i>musim-GapPriorityAssistanceConfig</i> |
| Indicates the UE is allowed to provide MUSIM assistance information for gap(s) priority and/or MUSIM gaps keep preference. |
| <i>musim-GapProhibitTimer</i> |
| Prohibit timer for MUSIM assistance information reporting for gap preference. |
| <i>musim-LeaveAssistanceConfig</i> |
| Configuration for the UE to report assistance information for leaving RRC_CONNECTED for MUSIM purpose. |
| <i>musim-LeaveWithoutResponseTimer</i> |
| Indicates the timer for the UE to enter RRC_IDLE for MUSIM purpose as defined in clause 5.3.8.6. |
| <i>musim-ProhibitTimer</i> |
| Indicates the prohibit timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value <i>ms0</i> means prohibit timer is set to 0 milliseconds, value <i>ms10</i> means prohibit timer is set to 10 milliseconds and so on. |
| <i>musim-WaitTimer</i> |
| Indicates the wait timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value <i>ms10</i> means wait timer is set to 10 milliseconds, value <i>ms20</i> means wait timer is set to 20 milliseconds and so on. |

| |
|---|
| obtainCommonLocation |
| Requests the UE to attempt to have detailed location information available using GNSS. NR configures the field if <i>includeCommonLocationInfo</i> is configured for one or more measurements. |
| overheatingAssistanceConfig |
| Configuration for the UE to report assistance information to inform the gNB about UE detected internal overheating. |
| overheatingIndicationProhibitTimer |
| Prohibit timer for overheating assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| parameters |
| Indicates the parameters for a candidate UE-side data collection configuration. |
| parametersForBM |
| Indicates the parameters for a candidate UE-side data collection configuration for beam management. |
| parametersForCSI-InferencePrediction |
| Indicates the parameters for a candidate UE-side data collection configuration for CSI prediction. |
| pdu-SessionsToReportUL-TrafficInfoList |
| A list of PDU sessions for which the UE shall report UL traffic information. |
| propDelayDiffReportConfig |
| Configuration for the UE to report service link propagation delay difference between serving cell and neighbour cell(s). |
| qfi-ToReportUL-TrafficInfoList |
| A list of QFIs of a PDU session for which the UE shall report UL traffic information. |
| referenceTimePreferenceReporting |
| If present, the field indicates the UE is configured to provide reference time assistance information. |
| refLocList |
| A list of reference locations for assisted SMTC and measurement gap configuration in RRC_CONNECTED state. If this field is absent when <i>closestLocsToReport</i> is signalled, the UE shall use the <i>refLocList</i> provided in <i>SIB19</i> , if available. |
| releasePreferenceConfig |
| Configuration for the UE to report assistance information to inform the gNB about the UE's preference to leave RRC_CONNECTED state. |
| releasePreferenceProhibitTimer |
| Prohibit timer for release preference assistance information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. Value <i>infinity</i> means that once a UE has reported a release preference, the UE cannot report a release preference again during the RRC connection. |
| rlm-RelaxationReportingConfig |
| Configuration for the UE to report the relaxation state of RLM measurements. |
| s-SearchDeltaP-Stationary |
| Parameter "S _{SearchDeltaP-StationaryConnected} " in 5.7.4.4. Value dB2 corresponds to 2 dB, dB3 corresponds to 3 dB and so on. |
| scg-DeactivationPreferenceConfig |
| Configuration of the UE to indicate its preference for SCG deactivation. |
| scg-StatePreferenceProhibitTimer |
| Prohibit timer for UE indication of its preference for SCG deactivation. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| sensorNameList |
| Configuration for the UE to report measurements from specific sensors. NG-RAN configures the field if <i>includeSensor-Meas</i> is configured for one or more measurements. |

| |
|---|
| sl-AssistanceConfigNR |
| Indicate whether UE is configured to provide configured grant assistance information for NR sidelink communication. |
| sl-PRS-AssistanceConfigNR |
| Indicate whether UE is configured to provide configured grant assistance information for NR sidelink positioning. |
| sn-InitiatedPSCellChange |
| This field indicates whether the PSCell change procedure or the CPC included in the <i>RRCReconfiguration</i> message is SN initiated or not. In case of SN initiated inter-SN PSCell change procedure or SN configured inter-SN CPC, MN includes this field in the MCG RRC Reconfiguration message. In case of intra-SN PSCell change, or intra-SN CPC, source SN includes the field in the SCG RRC Reconfiguration. |
| sourceDAPS-FailureReporting |
| This field indicates whether the UE shall generate the SHR upon successfully completing the DAPS handover to the target cell and if a radio link failure was experienced in the source PCell while executing the DAPS handover. This field is set in the <i>otherConfig</i> configured by the source cell of the DAPS handover. |
| successHO-Config |
| Configuration for the UE to report the successful handover information to the network. |
| successPSCell-Config |
| Configuration for the UE to report the successful PSCell change or addition information to the network. When this field is configured in CG-Config, the <i>thresholdPercentageT304-SCG</i> is absent. |
| t-SearchDeltaP-Stationary |
| Parameter "T _{SearchDeltaP-StationaryConnected} " in 5.7.4.4. Value in seconds. Value s5 means 5 seconds, value s10 means 10 seconds and so on. |
| thresholdPercentageT304 |
| This field indicates the threshold for the ratio in percentage between the elapsed T304 timer and the configured value of the T304 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the target cell of the handover. |
| thresholdPercentageT310 |
| This field indicates the threshold for the ratio in percentage between the elapsed T310 timer and the configured value of the T310 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the source cell of the handover. |
| thresholdPercentageT312 |
| This field indicates the threshold for the ratio in percentage between the elapsed T312 timer and the configured value(s) of the T312 timer. Value <i>p20</i> corresponds to 20%, value <i>p40</i> corresponds to 40% and so on. This field is set in the <i>otherConfig</i> configured by the source cell of the handover. |
| thresholdPercentageT304-SCG |
| This field indicates the threshold for the ratio in percentage between the elapsed T304 timer associated to the target PSCell and the configured value of the T304 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the target PSCell of the PSCell change or addition. |
| thresholdPercentageT310-SCG |
| This field indicates the threshold for the ratio in percentage between the elapsed T310 timer associated to the source PSCell and the configured value of the T310 timer. Value <i>p40</i> corresponds to 40%, value <i>p60</i> corresponds to 60% and so on. This field is set in the <i>otherConfig</i> configured by the source PSCell of the PSCell change or CPC, or in the <i>otherConfig</i> configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3. |
| thresholdPercentageT312-SCG |
| This field indicates the threshold for the ratio in percentage between the elapsed T312 timer associated to the measurement identity of the target PSCell and the configured value of the T312 timer. Value <i>p20</i> corresponds to 20%, value <i>p40</i> corresponds to 40% and so on. This field is set in the <i>otherConfig</i> configured by the source PSCell of the PSCell change or CPC, or in the <i>otherConfig</i> configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3. |
| threshPropDelayDiff |
| Threshold for one-way service link propagation delay difference report as specified in 5.7.4.2. |
| ul-GapFR2-PreferenceConfig |
| Indicates whether UE is configured to request for FR2 UL gap activation/deactivation and preferred FR2 UL gap pattern. |
| wlanNameList |
| Configuration for the UE to report measurements from specific WLAN APs. NG-RAN configures the field if <i>includeWLAN-Meas</i> is configured for one or more measurements. |

| |
|---|
| ul-TrafficInfoProhibitTimer
Prohibit timer for UL traffic information reporting. Value in seconds. Value <i>s0</i> means prohibit timer is set to 0 seconds, value <i>s0dot5</i> means prohibit timer is set to 0.5 seconds, value <i>s1</i> means prohibit timer is set to 1 second and so on. |
| ul-TrafficInfoReportingConfig
Configuration for the UE to report UL traffic information. |

| Conditional Presence | Explanation |
|-----------------------|---|
| <i>FDM</i> | This field is optionally present, need R, if <i>idc-AssistanceConfig-r16</i> or <i>idc-FDM-AssistanceConfig</i> is setup. Otherwise, it is absent, need R. |
| <i>maxBW</i> | This field is optionally present, need R, if <i>maxBW-PreferenceConfig-r16</i> is setup; otherwise it is absent, need R. |
| <i>maxMIMO</i> | This field is optionally present, need R, if <i>maxMIMO-LayerPreferenceConfig-r16</i> is setup; otherwise it is absent, need R. |
| <i>minOffset</i> | This field is optionally present, need R, if <i>minSchedulingOffsetPreferenceConfig-r16</i> is setup; otherwise it is absent, need R. |
| <i>musimGapConfig</i> | This field is optionally present, need R, if <i>musim-GapAssistanceConfig-r17</i> is setup; otherwise it is absent, need R. |
| <i>SCG</i> | This field is optionally present, need M, in an <i>RRCReconfiguration</i> message not within <i>mrdc-SecondaryCellGroup</i> and received, either via SRB3 within <i>DLInformationTransferMRDC</i> or via SRB1. Otherwise, it is absent. |

– *PhysCellIdUTRA-FDD*

The IE *PhysCellIdUTRA-FDD* is used to indicate the physical layer identity of the cell, i.e. the primary scrambling code, as defined in TS 25.331 [45].

***PhysCellIdUTRA-FDD* information element**

```
-- ASN1START
-- TAG-PHYSCELLIDUTRA-FDD-START

PhysCellIdUTRA-FDD-r16 ::=          INTEGER (0..511)

-- TAG-PHYSCELLIDUTRA-FDD-STOP
-- ASN1STOP
```

– *RRC-TransactionIdentifier*

The IE *RRC-TransactionIdentifier* is used, together with the message type, for the identification of an RRC procedure (transaction).

***RRC-TransactionIdentifier* information element**

```
-- ASN1START
-- TAG-RRC-TRANSACTIONIDENTIFIER-START

RRC-TransactionIdentifier ::=      INTEGER (0..3)

-- TAG-RRC-TRANSACTIONIDENTIFIER-STOP
```

-- ASN1STOP

– *Sensor-NameList*

The IE *Sensor-NameList* is used to indicate the names of the sensors which the UE is configured to measure.

***Sensor-NameList* information element**

```
-- ASN1START
-- TAG-SENSORNAMELIST-START

Sensor-NameList-r16 ::= SEQUENCE {
    measUncomBarPre-r16      ENUMERATED {true}          OPTIONAL, -- Need R
    measUeSpeed              ENUMERATED {true}          OPTIONAL, -- Need R
    measUeOrientation        ENUMERATED {true}          OPTIONAL, -- Need R
}

-- TAG-SENSORNAMELIST-STOP
-- ASN1STOP
```

| <i>Sensor-NameList</i> field descriptions |
|--|
| <i>measUncomBarPre</i>
If configured, the UE reports the uncompensated Barometric pressure measurement as defined in TS 37.355 [49]. |
| <i>measUeSpeed</i>
If configured, the UE reports the UE speed measurement as defined in TS 37.355 [49]. |
| <i>measUeOrientation</i>
If configured, the UE reports the UE orientation information as defined in TS 37.355 [49]. |

– *TraceReference*

The *TraceReference* contains parameter Trace Reference as defined in TS 32.422 [52].

***TraceReference* information element**

```
-- ASN1START
-- TAG-TRACEREFERENCE-START

TraceReference-r16 ::= SEQUENCE {
    plmn-Identity-r16        PLMN-Identity,
    traceId-r16              OCTET STRING (SIZE (3))
}

-- TAG-TRACEREFERENCE-STOP
```

```
-- ASN1STOP
```

– *UE-MeasurementsAvailable*

The IE *UE-MeasurementsAvailable* is used to indicate all relevant available indicators for UE measurements.

UE-MeasurementsAvailable information element

```
-- ASN1START
-- TAG-UE-MeasurementsAvailable-START

UE-MeasurementsAvailable-r16 ::=
    SEQUENCE {
        logMeasAvailable-r16          ENUMERATED {true}          OPTIONAL,
        logMeasAvailableBT-r16        ENUMERATED {true}          OPTIONAL,
        logMeasAvailableWLAN-r16      ENUMERATED {true}          OPTIONAL,
        connEstFailInfoAvailable-r16  ENUMERATED {true}          OPTIONAL,
        rlf-InfoAvailable-r16         ENUMERATED {true}          OPTIONAL,
        ...,
        [
            successHO-InfoAvailable-r17 ENUMERATED {true}          OPTIONAL,
            sigLogMeasConfigAvailable-r17 BOOLEAN                  OPTIONAL
        ],
        [
            successPSCell-InfoAvailable-r18 ENUMERATED {true}      OPTIONAL
        ]
    }

-- TAG-UE-MeasurementsAvailable-STOP
-- ASN1STOP
```

– *UTRA-FDD-Q-OffsetRange*

The IE *UTRA-FDD-Q-OffsetRange* is used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

UTRA-FDD-Q-OffsetRange information element

```
-- ASN1START
-- TAG-UTRA-FDD-Q-OFFSETRANGE-START

UTRA-FDD-Q-OffsetRange-r16 ::=
    ENUMERATED {
        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
    }
```

dB20, dB22, dB24}

```
-- TAG-UTRA-FDD-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

– VisitedCellInfoList

The IE *VisitedCellInfoList* includes the mobility history information of maximum of 16 most recently visited primary cells or time spent in any cell selection state and/or camped on any cell state in NR or E-UTRA and, in case of Dual Connectivity, the mobility history information of *maxPSCellHistory* most recently visited primary secondary cell group cells across all the primary cells included in the *VisitedCellInfoList*. The most recently visited cell is stored first in the list. The list includes cells visited in RRC_IDLE, RRC_INACTIVE and RRC_CONNECTED states for NR and RRC_IDLE and RRC_CONNECTED for E-UTRA.

VisitedCellInfoList information element

```
-- ASN1START
-- TAG-VISITEDCELLINFOLIST-START

VisitedCellInfoList-r16 ::= SEQUENCE (SIZE (1..maxCellHistory-r16)) OF VisitedCellInfo-r16

VisitedCellInfo-r16 ::= SEQUENCE {
    visitedCellId-r16 CHOICE {
        nr-CellId-r16 CHOICE {
            cgi-Info CGI-Info-Logging-r16,

```

| VisitedCellInfoList field descriptions |
|--|
| scgActiveDuration
This field indicates the accumulated SCG active duration of stay in the PSCell. Value in seconds. If the duration of activation exceeds 4095 seconds, the UE shall set it to 4095 seconds. |
| timeSpent
This field indicates the duration of stay in the cell or in any cell selection state and/or camped on any cell state in NR or E-UTRA approximated to the closest second. If included in <i>VisitedPSCellInfo</i> , it indicates the duration of stay in the PSCell or without any PSCell. If the duration of stay exceeds 4095s, the UE shall set it to 4095s. |
| visitedCellId
This field indicates the visited cell id including NR and E-UTRA cells. |

– *WLAN-NameList*

The IE *WLAN-NameList* is used to indicate the names of the WLAN AP for which the UE is configured to measure.

WLAN-NameList information element

```
-- ASN1START
-- TAG-WLANNAMEList-START

WLAN-NameList-r16 ::= SEQUENCE (SIZE (1..maxWLAN-Name-r16)) OF WLAN-Name-r16

WLAN-Name-r16 ::= OCTET STRING (SIZE (1..32))

-- ASN1STOP
-- TAG-WLANNAMEList-STOP
```

| WLAN-NameList field descriptions |
|--|
| WLAN-Name
If configured, the UE only performs WLAN measurements according to the names identified. For each name, it refers to Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50]. |

6.3.5 Sidelink information elements

– *SL-BWP-Config*

The IE *SL-BWP-Config* is used to configure the UE specific NR sidelink communication/discovery/positioning on one particular sidelink bandwidth part.

SL-BWP-Config field descriptions

sl-BWP-DiscPoolConfig

This field indicates the NR sidelink discovery dedicated resource pool configurations on the configured sidelink BWP. The total number of Rx/Tx resource pools configured for communication and discovery does not exceed the maximum number of Rx/Tx resource pool for NR sidelink communication (i.e. *maxNrofRXPool-r16/maxNrofTXPool-r16*).

sl-BWP-Generic

This field indicates the generic parameters on the configured sidelink BWP.

sl-BWP-Id

An identifier for this sidelink bandwidth part.

sl-BWP-PoolConfig

This field indicates the resource pool configurations on the configured sidelink BWP.

sl-BWP-PoolConfigA2X

This field indicates the resource pool configurations for A2X services on the configured sidelink BWP. This field does not include *sl-TxPoolScheduling*. This field does not include *sl-TxPoolExceptional*.

sl-BWP-PoolConfigPS

This field indicates the resource pool configurations for power saving on the configured sidelink BWP. This field does not include *sl-TxPoolExceptional*.

sl-BWP-PRS-PoolConfig

This field indicates the dedicated SL-PRS resource pool configurations for SL-PRS on the configured sidelink BWP. This field does not include *sl-PRS-TxPoolExceptional*. Dedicated SL-PRS resource pool is not expected to be configured in the slots colliding with the slots (pre)configured for any other resource pool(s) or S-SSB resource(s) in other SL carriers.

SL-BWP-Generic field descriptions

sl-LengthSymbols

This field indicates the number of symbols used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.

sl-StartSymbol

This field indicates the starting symbol used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.

sl-Unlicensed

This field indicates the configurations for sidelink carrier of shared spectrum channel access. This field is not expected to be provided when *sl-FreqInfoListSizeExt* or *sl-PreconfigFreqInfoListSizeExt* is present.

sl-TxDirectCurrentLocation

The sidelink Tx/Rx Direct Current location for the carrier. Only values in the value range of this field between 0 and 3299, which indicate the subcarrier index within the carrier corresponding to the numerology of the corresponding sidelink BWP and value 3300, which indicates "Outside the carrier" and value 3301, which indicates "Undetermined position within the carrier" are used in this version of the specification.

| <i>SL-Unlicensed</i> field descriptions |
|--|
| <i>sl-AbsoluteFrequencySSB-NonAnchorList</i>
Indicates the lowest S-SSB in a non-anchor RB set via each parameter in this list. Anchor RB set refers to the RB set where S-SSB indicated by <i>sl-AbsoluteFrequencySSB-r16</i> locates. |
| <i>sl-CPE-StartingPositionS-SSB</i>
Indicates the CPE starting position within the last symbol before the start of S-SSB transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS 38.211] for $C_i=1$ and the corresponding SCS of the SL BWP. |
| <i>sl-CWS-ForPsschWithoutHarqAck</i>
The latest CW_p is autonomously increased to the next higher allowed value for every priority class p of {1,2,3,4} if the same CW_p which is different from $CW_p(\max, p)$ is consecutively used for general of N_init in SL Type 1 LBT for a number of times indicated by this parameter. This operation is restricted only to PSCCH/PSSCH transmission(s) with "HARQ feedback enabled/disabled indicator" in the 2nd stage SCI set to disabled, regardless of whether PSFCH resources being configured in a resource pool. |
| <i>sl-GapOfAdditionalSSSB-Occasion</i>
Indicate the gap between each R16/R17 NR SL S-SSB slot and its first corresponding additional candidate S-SSB occasion, and the gap between adjacent two additional candidate S-SSB occasions corresponding to a R16/R17 NR SL S-SSB slot. |
| <i>sl-IntraCellGuardBandsSL-List</i>
List of intra-cell guard bands for operation with shared spectrum channel access. If not configured, the guard bands are defined according to 38.101-1 [15], see TS 38.214 [19], clause 7. For operation in licensed spectrum, this field is absent, and no UE action is required.
NOTE: Value '0' is not expected to be (pre-)configured for <i>nrofCRBs</i> when the SL BWP is larger than UE supported RF bandwidth for SL-U operation. |
| <i>sl-LBT-FailureRecoveryConfig</i>
Configures parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3]. |
| <i>sl-NumOfAdditionalSSSBOccasion</i>
Indicate the number of additional candidate S-SSB occasion(s) for each R16/R17 NR SL S-SSB slot. |
| <i>sl-SSSBPowerOffsetOfAnchorRBSet</i>
Indicate the power offset for one S-SSB transmission on anchor RB set, where anchor RB set refers to the RB set where S-SSB indicated by <i>sl-AbsoluteFrequencySSB-r16</i> locates. Value <i>value1</i> corresponds to the power offset of $10\lg(N)$, where N is the number of S-SSB repetitions within the anchor RB set, and <i>value2</i> corresponds to the power offset of $10\lg(W)$, where W is the maximum total number of S-SSB repetitions on RB sets within the SL-BWP. |
| <i>sl-StartingSymbolFirst</i>
Indicates the location of first starting symbol within a slot. Value <i>sym0</i> corresponds to first symbol, value <i>sym1</i> corresponds to the second symbol and so on. If the field is not configured, the UE shall use value <i>sym0</i> . |
| <i>sl-StartingSymbolSecond</i>
Indicates the location of second starting symbol within a slot. Value <i>sym3</i> corresponds to fourth symbol, value <i>sym4</i> corresponds to the fifth symbol and so on. The number of symbols used for PSCCH/PSSCH transmission from second starting symbol is not smaller than 6. Within a slot, the second starting symbol is later than the first starting symbol. PSCCH/PSSCH transmission starting from first or second starting symbol shall have the same ending symbol within a slot. |
| <i>sl-TransmissionStructureForPSCCHandPSSCH</i>
Indicate a SL-BWP is (pre-)configured with contiguous RB-based or interlace RB-based PSCCH/PSSCH transmission. Contiguous RB-based PSCCH/PSSCH are applicable in region with no OCB requirement, or with OCB exemption. |

– *SL-BWP-ConfigCommon*

The IE *SL-BWP-ConfigCommon* is used to configure the cell-specific configuration information on one particular sidelink bandwidth part.

SL-BWP-ConfigCommon information element

```

| SL-CBR-PriorityTxConfigList field descriptions | |
|--|--|
| sl-CBR-ConfigIndex | Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in <i>sl-CBR-RangeConfigList</i> . |
| sl-DefaultTxConfigIndex | Indicates the PSSCH transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in <i>sl-Tx-ConfigIndexList</i> . Value 0 indicates the first entry in <i>sl-Tx-ConfigIndexList</i> . The field is ignored if the UE has available CBR measurement results. |
| sl-MCS-RangeList | Indicates the minimum MCS value and maximum MCS value for the associated MCS table(s). UE shall ignore the minimum MCS value and maximum MCS value used for table of 64QAM indicated in <i>SL-CBR-PriorityTxConfigList-r16</i> if <i>SL-CBR-PriorityTxConfigList-v1650</i> is present. |
| sl-PriorityThreshold | Indicates the upper bound of priority range which is associated with the configurations in <i>sl-CBR-ConfigIndex</i> and in <i>sl-Tx-ConfigIndexList</i> . The upper bounds of the priority ranges are configured in ascending order for consecutive entries of <i>SL-PriorityTxConfigIndex</i> in <i>SL-CBR-PriorityTxConfigList</i> . For the first entry of <i>SL-PriorityTxConfigIndex</i> , the lower bound of the priority range is 1. |
| SL-CBR-PriorityTxConfigList-v1650 | If included, it includes the same number of entries, and listed in the same order, as in <i>SL-CBR-PriorityTxConfigList-r16</i> . |

– SL-CBR-CommonTxConfigList

The IE *SL-CBR-CommonTxConfigList* indicates the list of PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number, CR limit) in *sl-CBR-PSSCH-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeConfigList*, to configure congestion control to the UE for sidelink communication.

SL-CBR-CommonTxConfigList information element

```
-- ASN1START

```

SL-CBR-CommonTxConfigList field descriptions**sl-CBR-RangeConfigList**

Each entry in *sl-CBR-RangeConfigList* is *SL-CBR-LevelsConfig* containing the list of CBR ranges. The values within each *SL-CBR-LevelsConfig* indicate the upper bound of the each CBR range (and implicitly indicate the lower bound of next CBR range) and are configured in ascending order. For the first CBR range of each *SL-CBR-LevelsConfig*, the lower bound of the CBR range is 0. Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

sl-CR-Limit

Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.

sl-CBR-PSSCH-TxConfigList

Indicates the list of available PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number and CR limit) configurations.

sl-TxParameters

Indicates PSSCH transmission parameters.

– **SL-CBR-CommonTxDedicatedSL-PRS-RP-List**

The IE *SL-CBR-CommonTxDedicatedSL-PRS-RP-List* indicates the list of SL PRS transmission parameters (such as Maximum SL PRS transmission power, Maximum Number of SL PRS (re-)transmissions, and CR limit) in *sl-CBR-SL-PRS-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeDedicatedSL-PRS-RP-List*, to configure congestion control to the UE for sidelink positioning.

SL-CBR-CommonTxDedicatedSL-PRS-RP-List information element

```

SL-CBR-CommonTxDedicatedSL-PRS-RP-List* field descriptions**sl-CBR-RangeDedicatedSL-PRS-RP-List***

Indicates the list of CBR ranges. Each entry of the list in *SL-CBR-LevelsDedicatedSL-PRS-RP* indicates the upper bound of the CBR range for the respective entry. The upper bounds of the CBR ranges are configured in ascending order for consecutive entries of *SL-CBR-LevelsDedicatedSL-PRS-RP*. For the first entry of *SL-CBR-LevelsDedicatedSL-PRS-RP* the lower bound of the CBR range is 0. Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.

sl-CBR-SL-PRS-TxConfigList

Indicates the list of available SL PRS transmission parameters configurations.

sl-PRS-CR-Limit

Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.

sl-PRS-MaxNumTransmissions

Indicates the maximum number of SL PRS (re-)transmissions.

sl-PRS-MaxTx-power

Indicates the maximum SL PRS transmission power. The unit is dBm.

– ***SL-ConfigDedicatedNR***

The IE *SL-ConfigDedicatedNR* specifies the dedicated configuration information for NR sidelink communication/discovery/positioning.

SL-ConfigDedicatedNR field descriptions

sl-LBT-SchedulingRequestId

Indicates the scheduling request configuration applicable for Sidelink consistent LBT failure report, as specified in TS 38.321 [3].

sl-MaxTransPowerCA

The maximum total transmit power to be used by the UE across all sidelink carriers.

sl-MeasConfigInfoToAddModList

This field indicates the RSRP measurement configurations for unicast destinations to add and/or modify.

sl-MeasConfigInfoToReleaseList

This field indicates the RSRP measurement configurations for unicast destinations to remove.

sl-PHY-MAC-RLC-Config

This field indicates the lower layer sidelink radio bearer configurations.

sl-RadioBearerToAddModList

This field indicates one or multiple sidelink radio bearer configurations to add and/or modify. This field is not configured to the PC5 connection used for L2 U2N relay operation.

sl-RadioBearerToReleaseList

This field indicates one or multiple sidelink radio bearer configurations to remove. This field is not configured to the PC5 connection used for L2 U2N relay operation.

SL-PHY-MAC-RLC-Config field descriptions**networkControlledSyncTx**

This field indicates whether the UE shall transmit synchronisation information (i.e. become synchronisation source). Value *on* indicates the UE to transmit synchronisation information while value *off* indicates the UE to not transmit such information.

sl-DRX-Config

This field indicates the sidelink DRX configuration(s) for unicast, groupcast and/or broadcast communication, as specified in TS 38.321 [3].

sl-MaxNumConsecutiveDTX

This field indicates the maximum number of consecutive HARQ DTX before triggering sidelink RLF. Value *n1* corresponds to 1, value *n2* corresponds to 2, and so on.

sl-FreqInfoToAddModList, sl-FreqInfoToAddModListExt-v16k0, sl-FreqInfoToAddModListExt-v1800

This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to add and/or modify. If the network includes *sl-FreqInfoToAddModListExt-v16k0*, it includes the same number of entries, and listed in the same order, as in *sl-FreqInfoToAddModList-r16*. If the network includes *sl-FreqInfoToAddModListExt-v1800*, it includes the same number of entries, and listed in the same order, as in *sl-FreqInfoToAddModList-r16*.

sl-FreqInfoToReleaseList

This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to remove. In this release, only one entry can be configured in the list.

sl-RLC-BearerToAddModList, sl-RLC-BearerToAddModListSizeExt

This field indicates one or multiple sidelink RLC bearer configurations to add and/or modify.

sl-RLC-BearerToReleaseList, sl-RLC-BearerToReleaseListSizeExt

This field indicates one or multiple sidelink RLC bearer configurations to remove.

sl-RLC-ChannelToAddModList

This field indicates one or multiple PC5 Relay RLC Channel configurations to add and/or modify. Each PC5 Relay RLC channel configuration provided by network to L2 U2N Relay UE is uniquely associated with one L2 U2N Remote UE.

sl-RLC-ChannelToReleaseList

This field indicates one or multiple PC5 Relay RLC Channel configurations to remove.

sl-ScheduledConfig

Indicates the configuration for UE to transmit NR sidelink communication based on network scheduling. This field is not configured simultaneously with *sl-UE-SelectedConfig*. This field is not configured to a L2 U2N Remote UE.

sl-UE-SelectedConfig

Indicates the configuration used for UE autonomous resource selection. This field is not configured simultaneously with *sl-ScheduledConfig*.

sl-CSI-Acquisition

Indicates whether CSI reporting is enabled in sidelink unicast. If the field is absent, sidelink CSI reporting is disabled.

sl-CSI-SchedulingRequestId

If present, it indicates the scheduling request configuration applicable for Sidelink CSI Reporting MAC CE and Sidelink DRX Command MAC CE, as specified in TS 38.321 [3].

sl-PRS-SchedulingRequestId

If present, it indicates the scheduling request configuration applicable for Sidelink PRS Request MAC CE, as specified in TS 38.321 [3].

sl-SSB-PriorityNR

This field indicates the priority of NR sidelink SSB transmission and reception.

sl-SyncFreqList

Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication.

sl-SyncTxMultiFreq

Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency.

SL-SCCH-CarrierSetConfig field descriptions**sl-AllowedCarrierFreqSet1, sl-AllowedCarrierFreqSet2**

Indicates the set of carrier frequencies applicable for the transmission of the MAC SDUs from the sidelink SRB logical channels whose associated destination is included in sl-destinationList. If present, network ensures *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* do not include the same carrier frequency. The value 1 corresponds to the frequency of first entry in *sl-FreqInfoList* broadcast in *SIB12*, the value 2 corresponds to the frequency of first entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12*, the value 3 corresponds to the frequency of second entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12* and so on.

sl-DestinationList

This field indicates the list of destination identify that the *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* apply. Only destination identity for unicast link can be included in this field.

sl-SRB-Identity

This field indicates the list of sidelink SRB identities that the *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* apply.

| Conditional Presence | Explanation |
|----------------------|--|
| <i>L2RelayUE</i> | For L2 U2N Relay UE, the field is optionally present, Need M. Otherwise, it is absent. |
| <i>L2RemoteUE</i> | For L2 U2N Remote UE, the field is optionally present, Need M. Otherwise, it is absent. |
| <i>L2U2N</i> | The field is optional present for L2 U2N or L2 U2U Relay UE and L2 U2N or L2 U2U Remote UE, need N. Otherwise, it is absent. |
| <i>U2URelayUE</i> | For U2U Relay UE, the field is optionally present, Need M. Otherwise, it is absent. |
| <i>U2URemoteUE</i> | For U2U Remote UE, the field is optionally present, Need M. Otherwise, it is absent. |

– SL-ConfiguredGrantConfig

The IE *SL-ConfiguredGrantConfig* specifies the configured grant configuration information for NR sidelink communication.

SL-ConfiguredGrantConfig information element

```
-- ASN1START
-- TAG-SL-CONFIGUREDGRANTCONFIG-START

SL-ConfiguredGrantConfig-r16 ::=

OPTIONAL, -- Need M

OPTIONAL -- Need M

OPTIONAL -- Need M

| <i>SL-ConfiguredGrantConfig</i> field descriptions |
|---|
| <i>rrc-ConfiguredSidelinkGrant</i>
Configuration for "sidelink configured grant" transmission with fully RRC-configured SL grant (Type1). If this field is not configured, the UE uses SL grant configured by DCI addressed to SL-CS-RNTI (Type2). |
| <i>sl-ConfigIndexCG</i>
This field indicates the ID to identify sidelink configured grant. |
| <i>sl-CG-MaxTransNumList</i>
This field indicates the maximum number of times that a TB can be transmitted using the resources provided by the sidelink configured grant. <i>sl-Priority</i> corresponds to the logical channel priority. |
| <i>sl-FreqResourceCG-Type1</i>
Indicates the frequency resource location of sidelink configured grant type 1. An index giving valid combinations of one or two starting sub-channel and length (jointly encoded) as resource indicator value (RIV), as defined in TS 38.214 [19]. |
| <i>sl-HARQ-ProcID-Offset</i>
Indicates the offset used in deriving the HARQ process ID for sidelink configured grant type 1 or sidelink configured grant type 2, see TS 38.321 [3], clause 5.8.3. |
| <i>sl-N1PUCCH-AN</i>
This field indicates the PUCCH resource for HARQ feedback for sidelink configured grant type 1. The actual PUCCH-Resource is configured in <i>sl-PUCCH-Config</i> and referred to by its ID. |
| <i>sl-N1PUCCH-AN-Type2</i>
This field indicates the PUCCH resource for HARQ feedback for PSSCH/PSSCH transmissions without a corresponding PDCCCH on sidelink configured grant type 2. The actual PUCCH-Resource is configured in <i>sl-PUCCH-Config</i> and referred to by its ID. |
| <i>sl-NrofHARQ-Processes</i>
This field indicates the number of HARQ processes configured for a specific sidelink configured grant. It applies for both type 1 and type 2. |
| <i>sl-PeriodCG</i>
This field indicates the period of sidelink configured grant in the unit of ms. |
| <i>sl-PSFCH-ToPUCCH-CG-Type1</i>
This field, for sidelink configured grant type 1, indicates slot offset between the PSFCH associated with the last PSSCH resource of each period and the PUCCH occasion used for reporting sidelink HARQ. |
| <i>sl-ResourcePoolID</i>
Indicates the resource pool in which the sidelink configured grant type 1 is applied. |
| <i>sl-StartRBsetCG-Type1</i>
Indicates starting RB set index of the initial PSSCH transmission of the sidelink configured grant Type 1 for interlace RB-based PSSCH transmission. |
| <i>sl-StartSubchannelCG-Type1</i>
This field indicates the starting sub-channel of sidelink configured grant type 1. An index giving valid sub-channel index. |
| <i>sl-TimeOffsetCG-Type1</i>
This field indicates the slot offset with respect to logical slot defined by <i>sl-TimeReferenceSFN-Type1</i> , as specified in TS 38.321 [3]. |
| <i>sl-TimeReferenceSFN-Type1</i>
Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1 st logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0. |
| <i>sl-TimeResourceCG-Type1</i>
This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17]. |

– *SL-ConfiguredGrantConfigDedicatedSL-PRS-RP*

The IE *SL-ConfiguredGrantConfigDedicatedSL-PRS-RP* specifies the configured grant configuration information for NR sidelink positioning in a dedicated SL-PRS resource pool.

SL-ConfiguredGrantConfigDedicatedSL-PRS-RP information element

```
-- ASN1START
-- TAG-SL-CONFIGUREDGRANTCONFIGDEDICATEDSL-PRS-RP-START

SL-ConfiguredGrantConfigDedicatedSL-PRS-RP-r18 ::= SEQUENCE {
    sl-PRS-ConfigIndexCG-r18          SL-ConfigIndexCG-r16,

-- ASN1STOP
```

| SL-ConfiguredGrantConfigDedicatedSL-PRS-RP field descriptions | |
|---|--|
| sl-PRS-ConfigIndexCG | This field indicates the ID to identify sidelink configured grant. The field value should not be duplicated with <i>sl-ConfigIndexCG</i> in IE <i>SL-ConfiguredGrantConfig</i> . |
| sl-PRS-PeriodCG | This field indicates the period of SL PRS configured grant in a dedicated resources in ms for either CG type 1 or CG type 2. |
| sl-PRS-ResourceIndicationFirstType1 | Indicates SL-PRS Resource ID for the first SL-PRS transmission. |
| sl-PRS-ResourceIndicationFutureType1 | Indicates SL-PRS resource IDs for future SL PRS transmissions. An index giving valid combinations of up to two SL PRS resource IDs (jointly encoded) . |
| sl-PRS-ResourcePoolID | Indicates the resource pool in which the configured sidelink grant Type 1 is applied. This field value is configured with value up to 8 (<i>maxNrofSL-PRS-TxPool-r18</i>). The network always configures this field when <i>rrc-ConfiguredSidelinkGrantDedicatedSL-PRS-RP</i> contains parameters for a type 1 configured grant. |
| sl-TimeOffsetCG-Type1 | This field indicates the slot offset with respect to logical slot defined by <i>sl-TimeReferenceSFN-Type1</i> , as specified in TS 38.321 [3]. |
| sl-TimeReferenceSFN-Type1 | Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1 st logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0. |
| sl-TimeResourceCG-Type1 | This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17]. |

– SL-DestinationIdentity

The IE *SL-DestinationIdentity* is used to identify a destination of a NR sidelink communication.

SL-DestinationIdentity information element

```
-- ASN1START
-- TAG-SL-DESTINATIONIDENTITY-START

SL-DestinationIdentity-r16 ::=          BIT STRING (SIZE (24))

-- TAG-SL-DESTINATIONIDENTITY-STOP
-- ASN1STOP
```

– SL-DRX-Config

The IE *SL-DRX-Config* is used to configure DRX related parameters for NR sidelink communication/discovery. The SL DRX timers should be calculated in the unit of physical slot.

SL-DRX-Config information element

```
-- ASN1START
-- TAG-SL-DRX-CONFIG-START

SL-DRX-Config-r17 ::=
    SL-DRX-ConfigGC-BC-r17
    SL-DRX-ConfigUC-ToReleaseList-r17
    SL-DRX-ConfigUC-ToAddModList-r17
    ...
}

SL-DRX-ConfigUC-Info-r17 ::=
    SL-DestinationIndex-r16
    SL-DRX-ConfigUC-r17
    ...
}

-- TAG-SL-DRX-CONFIG-STOP
-- ASN1STOP
```

| SL-DRX-Config field descriptions | |
|--------------------------------------|--|
| sl-DRX-ConfigGC-BC | This field indicates the sidelink DRX configurations for groupcast and broadcast communication, as specified in TS 38.321 [3]. |
| sl-DRX-ConfigUC-ToReleaseList | This field indicates the sidelink DRX configurations for corresponding unicast destinations to remove. |
| sl-DRX-ConfigUC-ToAddModList | This field indicates the sidelink DRX configurations for corresponding unicast destinations to add and/or modify. |

| Conditional Presence | Explanation |
|----------------------|--|
| HO | This field is optionally present, need M, in an <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> ; otherwise it is absent, Need M. |

– SL-DRX-ConfigGC-BC

The IE *SL-DRX-ConfigGC-BC* is used to configure DRX related parameters for NR sidelink groupcast and broadcast communication, unicast/broadcast based communication of Direct Link Establishment Request (TS 24.587 [57]), and discovery message (TS 24.554 [72]).

SL-DRX-ConfigGC-BC information element

```

| <i>SL-DRX-ConfigGC-BC</i> field descriptions |
|--|
| <i>sl-DefaultDRX-GC-BC</i>
Indicates the default sidelink DRX configuration for groupcast and broadcast communications, which is used for QoS profile(s) that cannot be mapped into DRX configuration(s) configured for dedicated QoS profile(s). This field can be applied for the broadcast based or unicast based communication of Direct Link Establishment Request as described in TS 24.587 [57], ProSe Direct Link Establishment Request message and discovery message as described in TS 24.554 [72]. |
| <i>sl-DRX-GC-BC-PerQoS-List</i>
List of one or multiple sidelink DRX configurations for groupcast and broadcast communication, which are mapped from QoS profile(s). |
| <i>sl-DRX-GC-BC-Cycle</i>
Value in ms, ms10 corresponds to 10ms, ms20 corresponds to 20 ms, ms32 corresponds to 32 ms, and so on. |
| <i>sl-DRX-GC-BC-MappedQoS-FlowsList</i>
List of QoS profiles of the NR sidelink communication, which are mapped to a sidelink DRX configuration. |
| <i>sl-DRX-GC-BC-OnDurationTimer</i>
Value in multiples of 1/32 ms (subMilliseconds) or in ms (milliSecond). For the latter, value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, and so on. |
| <i>sl-DRX-GC-HARQ-RTT-Timer1</i>, <i>sl-DRX-GC-HARQ-RTT-Timer2</i>
Value in number of slot lengths of the sidelink BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on. <i>sl-DRX-GC-HARQ-RTT-Timer1</i> is used for HARQ feedback enabled sidelink retransmission if SCI does not indicate retransmission resource(s). <i>sl-DRX-GC-HARQ-RTT-Timer2</i> is used for HARQ feedback disabled sidelink retransmission in resource pool configured with PSFCH if SCI does not indicate retransmission resource(s). |
| <i>sl-DRX-GC-Generic</i>
Indicates a sidelink DRX configuration for groupcast communication, which is applicable to any QoS profile or any Destination Layer-2 ID. |
| <i>sl-DRX-GC-InactivityTimer</i>
Value in multiple integers of 1 ms, ms0 corresponds to 0, ms1 corresponds to 1 ms, ms2 corresponds to 2 ms, and so on. This field is only valid for groupcast communication. |
| <i>sl-DRX-GC-RetransmissionTimer</i>
Value in number of slot lengths of the sidelink BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on. |

– *SL-DRX-ConfigUC*

The IE *SL-DRX-ConfigUC* is used to configure sidelink DRX related parameters for unicast communication.

| <i>SL-FreqConfig</i> field descriptions |
|---|
| <p><i>absenceOfAnyOtherTechnology</i>
 Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier.</p> |
| <p><i>additionalSpectrumEmission</i>
 Provides the <i>additionalSpectrumEmission</i> values as defined in TS 38.101-1 [15], clause 6.2E.3.1 or 6.2E.3F.1. Only one of <i>additionalSpectrumEmission-r16</i> or <i>additionalSpectrumEmission-v1860</i> is configured by network for each sidelink frequency.</p> |
| <p><i>sl-EnergyDetectionConfig</i>
 Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.5.5).</p> |
| <p><i>sl-EnergyDetectionThresholdOffset</i>
 Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5.</p> |
| <p><i>frequencyShift7p5khzSL</i>
 Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.</p> |
| <p><i>harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2</i>
 Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage.</p> |
| <p><i>sl-MaxEnergyDetectionThreshold</i>
 Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5.</p> |
| <p><i>sl-AbsoluteFrequencyPointA</i>
 Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.</p> |
| <p><i>sl-AbsoluteFrequencySSB</i>
 Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP.</p> |
| <p><i>sl-BWP-ToAddModList</i>
 This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be added or reconfigured. In this release, only one BWP is allowed to be configured for NR sidelink communication.</p> |
| <p><i>sl-BWP-ToReleaseList</i>
 This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be released.</p> |
| <p><i>sl-Freq-Id</i>
 This field indicates the identity of the dedicated configuration information on the carrier frequency for NR sidelink communication.</p> |
| <p><i>sl-SCS-SpecificCarrierList</i>
 A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. In this release, only one <i>SCS-SpecificCarrier</i> is allowed to be configured for NR sidelink communication.</p> |
| <p><i>sl-SyncTxDisabled</i>
 Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB.</p> |
| <p><i>sl-SyncPriority</i>
 This field indicates synchronization priority order, as specified in clause 5.8.6. <i>sl-SyncPriority</i> is configured with the same value across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.</p> |

ue-ToUE-COT-SharingED-Threshold

Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm).

valueN

Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster. (see TS 38.101-1 [15], clause 5.4E.2).

| Conditional Presence | Explanation |
|----------------------|---|
| V2X-SL-Shared | This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise. |

– *SL-FreqConfigCommon*

The IE *SL-FreqConfigCommon* specifies the cell-specific configuration information on one particular carrier frequency for NR sidelink communication/positioning.

| <i>SL-FreqConfigCommon</i> field descriptions |
|--|
| <i>absenceOfAnyOtherTechnology</i>
Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier. |
| <i>additionalSpectrumEmission</i>
Provides the <i>additionalSpectrumEmission</i> values as defined in TS 38.101-1 [15], clause 6.2E.3.1 or 6.2E.3F.1. Only one of <i>additionalSpectrumEmission-r16</i> or <i>additionalSpectrumEmission-v1860</i> is configured by network for each sidelink frequency. |
| <i>sl-EnergyDetectionConfig</i>
Indicates whether to use the <i>maxEnergyDetectionThreshold</i> or the <i>energyDetectionThresholdOffset</i> (see TS 37.213 [48], clause 4.5.5). |
| <i>sl-EnergyDetectionThresholdOffset</i>
Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5. |
| <i>frequencyShift7p5khzSL</i>
Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled. |
| <i>harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2</i>
Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage. |
| <i>sl-MaxEnergyDetectionThreshold</i>
Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5. |
| <i>sl-AbsoluteFrequencyPointA</i>
Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A. |
| <i>sl-AbsoluteFrequencySSB</i>
Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP. |
| <i>sl-BWP-List</i>
This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration. In this release, only one BWP is allowed to be configured for NR sidelink communication. |
| <i>sl-NbAsSync</i>
This field indicates whether the network can be selected as synchronization reference directly/indirectly only, if <i>sl-SyncPriority</i> is set to gnss. If this field is set to TRUE, the network is enabled to be selected as synchronization reference directly/indirectly. The field is only present in <i>SidelinkPreconfigNR</i> . Otherwise it is absent. All values in <i>sl-NbAsSync</i> are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies. |
| <i>sl-PosBWP-List</i>
This field indicates the list of sidelink BWP(s) for NR sidelink positioning configuration. Only one BWP is allowed to be configured for NR sidelink positioning. |
| <i>sl-SyncTxDisabled</i>
Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB. |
| <i>sl-SyncPriority</i>
This field indicates synchronization priority order, as specified in clause 5.8.6. All values in <i>sl-SyncPriority</i> are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies. |
| <i>sl-SyncConfigList</i>
This field indicates the configuration by which the UE is allowed to receive and transmit synchronisation information for NR sidelink communication. Network configures <i>sl-SyncConfig</i> including <i>txParameters</i> when configuring UEs to transmit synchronisation information. If this field is configured in <i>SL-PreconfigurationNR-r16</i> , only one entry is configured in <i>sl-SyncConfigList</i> . |

| |
|--|
| <i>ue-ToUE-COT-SharingED-Threshold</i>
Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with to other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm). |
| <i>valueN</i>
Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster (see TS 38.101-1 [15], clause 5.4E.2). |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>SIB12</i> | This field is optional present if included within <i>SIB12</i> , need R. Otherwise, the field is absent. |
| <i>SIB23</i> | This field is optional present if included within <i>SIB23</i> , need R. Otherwise, the field is absent. |
| <i>V2X-SL-Shared</i> | This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise. |

– *SL-FreqSelectionConfig*

The IE *SL-FreqSelectionConfig* specifies the configuration information for carrier selection for NR sidelink transmission using UE autonomous resource selection.

***SL-FreqSelectionConfig* information element**

```
-- ASN1START
-- TAG-SL-FREQSELECTIONCONFIG-START

SL-FreqSelectionConfig-r18 ::= SEQUENCE {
    sl-priorityList-r18          SEQUENCE (SIZE (1..8)) OF INTEGER (1..8),
    sl-threshCBR-FreqReselection-r18 SL-CBR-r16,
    sl-threshCBR-FreqKeeping-r18  SL-CBR-r16
}

-- TAG-SL-FREQSELECTIONCONFIG-STOP
-- ASN1STOP
```

| <i>SL-FreqSelectionConfig</i> field descriptions |
|---|
| <i>sl-priorityList</i>
Indicates the list of sidelink logical channel priority which is associated with the configurations in <i>sl-threshCBR-FreqReselection</i> and in <i>sl-threshCBR-FreqKeeping</i> . |
| <i>sl-threshCBR-FreqReselection</i>
Indicates the CBR threshold based on which UE determines whether the carrier frequency can be (re)selected for the transmission of NR sidelink. See TS 38.321 [3]. |
| <i>sl-threshCBR-FreqKeeping</i>
Indicates the CBR threshold based on which UE determines whether the UE can keep using the carrier which was selected for the transmission of NR sidelink. See TS 38.321 [3]. |

– *SL-IndirectPathAddChange*

The IE *SL-IndirectPathAddChange* specifies the configuration information of SL indirect path for SL indirect path addition/change in MP.

***SL-IndirectPathAddChange* information element**

```
-- ASN1START
-- TAG-SL-INDIRECTPATHADDCHANGE-START

SL-IndirectPathAddChange-r18 ::= SEQUENCE {
    sl-IndirectPathRelayUE-Identity-r18 SL-SourceIdentity-r17,
    sl-IndirectPathCellIdentity-r18 CellIdentity,
    t421-r18 ENUMERATED {ms50, ms100, ms150, ms200, ms500, ms1000, ms2000, ms10000} OPTIONAL, -- Need M
    ...
}

-- TAG-SL-INDIRECTPATHADDCHANGE-STOP
-- ASN1STOP
```

| SL-IndirectPathAddChange field descriptions | |
|---|---|
| sl-IndirectPathRelayUEIdentity | Indicates the L2 source ID of the L2 U2N Relay UE of SL indirect path. |
| sl-IndirectPathCellIdentity | Identifies the serving cell of the indicated L2 U2N Relay UE. |
| t421 | Indicates the timer value of T421 to be used during indirect path addition or change. |

– *SL-InterUE-CoordinationConfig*

The IE *SL-InterUE-CoordinationConfig* is used to configure the sidelink inter-UE coordination (between a UE, UE-A, and a peer UE, UE-B) parameters. The network ensures sidelink inter-UE coordination and sidelink DRX are not configured at the same time for a UE.

***SL-InterUE-CoordinationConfig* information element**

```
-- ASN1START
-- TAG-SL-INTERUE-COORDINATIONCONFIG-START

SL-InterUE-CoordinationConfig-r17 ::= SEQUENCE {
    sl-InterUE-CoordinationScheme1-r17 SL-InterUE-CoordinationScheme1-r17 OPTIONAL, -- Need M

-- ASN1STOP

```

| <i>SL-InterUE-CoordinationScheme1</i> field descriptions |
|--|
| <i>sl-Condition1-A-2</i>
Indicates disabling the use of condition of excluding from preferred resource set resource(s) in slot(s) where UE-A, when it is intended receiver of UE-B, does not expect to perform SL reception from UE-B due to half duplex operation. |
| <i>sl-ContainerCoordInfo</i>
Indicates whether a SCI format 2-C can be used as the container of inter-UE coordination information transmission from UE-A to UE-B in Scheme 1 in addition to using MAC CE. |
| <i>sl-ContainerRequest</i>
Indicates whether a SCI format 2-C can be used as the container of an explicit request for inter-UE coordination information transmission from UE-B to UE-A in Scheme 1 in addition to using MAC CE. |
| <i>sl-DetermineResourceType</i>
Indicates how to determine the resource set type to be provided by inter-UE coordination information transmission. Value "uea" means the resource set type is determined by UE-A's implementation. Value "ueb" means the resource set type is determined by UE-B's request. |
| <i>sl-IUC-Condition</i>
Indicates whether inter-UE coordination information triggered by a condition is enabled or not other than explicit request reception. |
| <i>sl-IUC-Explicit</i>
Indicates whether inter-UE coordination information triggered by an explicit request is enabled or not. |
| <i>sl-MaxSlotOffsetTRIV</i>
Indicates the maximum value of logical slot offset with respect to a reference slot that is used for representing the first resource location of each TRIV to indicate the set of resources in Scheme 1 as specified in TS 38.214 [19]. |
| <i>sl-NumSubCH-PreferredResourceSet</i>
Indicates the number of sub-channels used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception. |
| <i>sl-PriorityCoordInfoCondition</i>
Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by a condition other than explicit request reception in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1". |
| <i>sl-PriorityCoordInfoExplicit</i>
Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by an explicit request in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1". |
| <i>sl-PriorityPreferredResourceSet</i>
Indicates the priority value used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception. |
| <i>sl-PriorityRequest</i>
Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC request MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC request MAC CE, in an explicit request for inter-UE coordination information in Scheme 1. The priority value of IUC request MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1". |
| <i>sl-ReservedPeriodPreferredResourceSet</i>
Indicates the resource reservation interval used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition, by means of an index to the corresponding entry of <i>sl-ResourceReservePeriodList-r16</i> . |

sl-TriggerConditionCoordInfo

Indicates the additional alternative trigger condition of inter-UE coordination information triggered by a condition rather than request reception for data transmission in Scheme-1 from UE-A to UE-B. This field is also used to indicate the additional alternative trigger condition of inter-UE coordination information triggered by a condition rather than request reception for SL-PRS transmission in a shared SL PRS resource pool in Scheme-1 from UE-A to UE-B. Value 0 means inter-UE coordination information is triggered by UE-A's implementation. Value 1 means inter-UE coordination information can be triggered only when UE-A has data to be transmitted together with the inter-UE coordination information to UE-B.

sl-TriggerConditionRequest

Indicates the trigger condition of an explicit request from UE-B to UE-A for data transmission. This field is also used to indicate the trigger condition of an explicit request from UE-B to UE-A for SL-PRS transmission in a shared SL PRS resource pool. Value 0 means the explicit request is triggered by UE-B's implementation. Value 1 means the explicit request can be triggered only when UE-B has data or SL-PRS to be transmitted to UE-A.

sl-ThresholdRSRP-Condition1-B-1-Option1List

Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is larger than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to $(-128 + (n-1)*2)$ dBm and so on, value 66 corresponds to infinity dBm.

sl-ThresholdRSRP-Condition1-B-1-Option2List

Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is smaller than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to $(-128 + (n-1)*2)$ dBm and so on, value 66 corresponds to infinity dBm.

| <i>SL-InterUE-CoordinationScheme2</i> field descriptions |
|---|
| <i>sl-DeltaRSRP-Thresh</i>
Indicates the RSRP threshold delta value corresponding to <i>deltaRSRPThresh</i> specified in clause 16.3.0 of TS 38.213 [13] and used to determine reserved resource(s) of other UE(s). Value in dB. Only even values (step size 2) allowed. |
| <i>sl-IndicationUE-B</i>
Indicates whether to enable or disable the usage of 1 LSB of reserved bits of a SCI format 1-A to indicate of whether UE scheduling a conflict TB can be UE-B or not. |
| <i>sl-IUC-Scheme2</i>
Indicates whether inter-UE coordination Scheme 2 is enabled or not. |
| <i>sl-OptionForCondition2-A-1</i>
Indicates the RSRP threshold used to consider additional criteria for condition 2-A-1. Value 0 corresponds to using the RSRP threshold according to the priorities included in the SCI, UE uses thresholds <i>sl-Thres-RSRP-List</i> , in its resource pool configuration <i>sl-UE-SelectedConfigRP</i> , corresponding to <i>ThresPSSCH-RSRP-List</i> specified in clause 16.3.0 of TS 38.213 [13]. Value 1 corresponds to using a (pre)configured RSRP threshold delta value <i>sl-DeltaRSRP-Thresh</i> , corresponding to <i>deltaRSRPThresh</i> specified in clause 16.3.0 of TS 38.213 [13]. |
| <i>sl-PSFCH-Occasion</i>
Indicates the reference slot from which a PSFCH occasion for inter-UE coordination information transmission is derived. Value 0 corresponds to the slot where UE-B's SCI is transmitted and value 1 corresponds to the slot where expected/potential resource conflict occurs on PSSCH resource indicated by UE-B's SCI. |
| <i>sl-RB-SetPSFCH</i>
Indicates the set of PRBs that are actually used for inter-UE coordination information transmission and reception in Scheme 2. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on. |
| <i>sl-SlotLevelResourceExclusion</i>
Indicates that physical layer of UE-B reports resources in a slot including the next reserved resource indicated by the corresponding UE-B's SCI to higher layer. |
| <i>sl-TypeUE-A</i>
Indicates that a non-destination UE of a TB transmitted by UE-B can be UE-A which sends inter-UE coordination information to UE-B, when UE-A is a destination UE of another TB conflicting with the TB transmitted by UE-B. |

– *SL-LBT-FailureRecoveryConfig*

The IE *SL-LBT-FailureRecoveryConfig-r18* is used to configure the parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].

***SL-LBT-FailureRecoveryConfig* information element**

```
-- ASN1START
-- TAG-SL-LBT-FAILURERECOVERYCONFIG-START

SL-LBT-FailureRecoveryConfig-r18 ::= SEQUENCE {
    sl-LBT-FailureInstanceMaxCount-r18    ENUMERATED {n4, n8, n16, n32, n64, n128, spare2, spare1}    OPTIONAL,    -- Need M
    sl-LBT-FailureDetectionTimer-r18      ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL,    -- Need M
    sl-LBT-RecoveryTimer-r18              ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL,    -- Need M
    ...
}

-- TAG-SL-LBT-FAILURERECOVERYCONFIG-STOP
-- ASN1STOP
```

SL-LBT-FailureRecoveryConfig field descriptions**sl-LBT-FailureDetectionTimer**

Timer for consistent sidelink LBT failure detection (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.

sl-LBT-FailureInstanceMaxCount

This field determines after how many LBT failure indications received from the physical layer the UE triggers sidelink LBT failure recovery (see TS 38.321 [3]). Value n4 corresponds to 4, value n8 corresponds to 8, and so on.

sl-LBT-RecoveryTimer

Timer for consistent sidelink LBT failure cancellation (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.

– SL-LogicalChannelConfig

The IE *SL-LogicalChannelConfig* is used to configure the sidelink logical channel parameters.

SL-LogicalChannelConfig information element

```
-- ASN1START
-- TAG-SL-LOGICALCHANNELCONFIG-START

SL-LogicalChannelConfig-r16 ::=
    SEQUENCE {
        sl-Priority-r16
            INTEGER (1..8),
        sl-PrioritisedBitRate-r16
            ENUMERATED {kBps0, kBps8, kBps16, kBps32, kBps64, kBps128, kBps256, kBps512,

        ]]
    }
-- TAG-SL-LOGICALCHANNELCONFIG-STOP
-- ASN1STOP
```

| <i>SL-LogicalChannelConfig</i> field descriptions |
|---|
| <i>sl-AllowedCarriers</i>
If present, SL MAC SDUs from this logical channel can only be mapped to the sidelink carriers indicated in this list. Otherwise, SL MAC SDUs from this logical channel can be mapped to any configured sidelink carriers. The value 1 corresponds to the frequency of first entry in <i>sl-FreqInfoList</i> broadcast in <i>SIB12</i> , the value 2 corresponds to the frequency of first entry in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i> , the value 3 corresponds to the frequency of second entry in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i> and so on. |
| <i>sl-AllowedCG-List</i>
This restriction applies only when the SL grant is a configured grant. If present, SL MAC SDUs from this logical channel can only be mapped to the indicated configured grant configuration. If the size of the sequence is zero, then SL MAC SDUs from this logical channel cannot be mapped to any configured grant configurations. If the field is not present, SL MAC SDUs from this logical channel can be mapped to any configured grant configurations. If the field <i>sl-ConfiguredGrantType1Allowed</i> is present, only those sidelink configured grant type 1 configurations indicated in this sequence are allowed for use by this sidelink logical channel; otherwise, this sequence shall not include any sidelink configured grant type 1 configuration. Corresponds to "sl-AllowedCG-List" as specified in TS 38.321 [3]. |
| <i>sl-AllowedSCS-List</i>
If present, it indicates the numerology of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to 'sl-AllowedSCS-List' in TS 38.321 [3]. |
| <i>sl-BucketSizeDuration</i>
Value in ms. <i>ms5</i> corresponds to 5 ms, value <i>ms10</i> corresponds to 10 ms, and so on. |
| <i>sl-ChannelAccessPriority</i>
Indicates the Channel Access Priority Class (CAPC), as specified in TS 38.300 [2], to be used on sidelink transmissions for operation with shared spectrum channel access in FR1. The network configures this field only for DRBs. |
| <i>sl-ConfiguredGrantType1Allowed</i>
If present and set to true, or if the capability <i>lcp-RestrictionSidelink</i> as specified in TS 38.306 [26] is not indicated, SL MAC SDUs from this sidelink logical channel can be transmitted on a sidelink configured grant type 1. Otherwise, SL MAC SDUs from this logical channel cannot be transmitted on a sidelink configured grant type 1. Corresponds to 'sl-configuredGrantType1Allowed' in TS 38.321 [3]. |
| <i>sl-HARQ-FeedbackEnabled</i>
Network always includes this field. It indicates the HARQ feedback enabled/disabled restriction in LCP for this sidelink logical channel. If set to <i>enabled</i> , the sidelink logical channel will be multiplexed only with a logical channel which enabling the HARQ feedback. If set to <i>disabled</i> , the sidelink logical channel cannot be multiplexed with a logical channel which enabling the HARQ feedback. Corresponds to 'sl-HARQ-FeedbackEnabled' in TS 38.321 [3]. If this field of at least one sidelink logical channel for the UE is set to enabled, <i>sl-PSFCH-Config</i> should be mandatory present in configuration <i>SL-ResourcePool</i> of at least one of the sidelink resource pools. |
| <i>sl-LogicalChannelGroup</i>
ID of the sidelink logical channel group, as specified in TS 38.321 [3], which the sidelink logical channel belongs to. |
| <i>sl-LogicalChannelSR-DelayTimerApplied</i>
Indicates whether to apply the delay timer for SR transmission for this sidelink logical channel. Set to false if <i>logicalChannelSR-DelayTimer</i> is not included in <i>sl-BSR-Config</i> . |
| <i>sl-MaxPUSCH-Duration</i>
If present, it indicates the maximum PUSCH duration of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to "sl-MaxPUSCH-Duration" in TS 38.321 [3]. |
| <i>sl-PrioritisedBitRate</i>
Value in kiloBytes/s. Value <i>kBps0</i> corresponds to 0 kiloBytes/s, value <i>kBps8</i> corresponds to 8 kiloBytes/s, value <i>kBps16</i> corresponds to 16 kiloBytes/s, and so on. |
| <i>sl-Priority</i>
Sidelink logical channel priority, as specified in TS 38.321 [3]. |
| <i>sl-SchedulingRequestId</i>
If present, it indicates the scheduling request configuration applicable for this sidelink logical channel, as specified in TS 38.321 [3]. |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>CONNECTED</i> | This field is optionally present, Need M, in an RRCReconfiguration message, for a SL DRB with additional sidelink RLC bearer being configured. The field is absent otherwise. |

– *SL-L2RelayUE-Config*

The IE *SL-L2RelayUE-Config* is used to configure L2 U2N relay operation related configurations used by L2 U2N Relay UE, or L2 U2U relay operation related configurations used by L2 U2U Relay UE.

SL-L2RelayUE-Config information element

```

SL-MeasIdToRemoveList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasId-r16

-- TAG-SL-MEASCONFIGINFO-STOP
-- ASN1STOP
```

| SL-MeasConfigInfo field descriptions |
|---|
| sl-MeasIdToAddModList
List of sidelink measurement identities to add and/or modify. |
| sl-MeasIdToRemoveList
List of sidelink measurement identities to remove. |
| sl-MeasObjectToAddModList
List of sidelink measurement objects to add and/or modify. |
| sl-MeasObjectToRemoveList
List of sidelink measurement objects to remove. |
| sl-QuantityConfig
Indicates the layer 3 filtering coefficient for sidelink measurement. |
| sl-ReportConfigToAddModList
List of sidelink measurement reporting configurations to add and/or modify. |
| sl-ReportConfigToRemoveList
List of sidelink measurement reporting configurations to remove. |

– SL-MeasIdList

The IE *SL-MeasIdList* concerns a list of SL measurement identities to add or modify for a destination, with for each entry the *sl-MeasId*, the associated *sl-MeasObjectId* and the associated *sl-ReportConfigId*.

SL-MeasIdList information element

```

-- ASN1START
-- TAG-SL-MEASIDLIST-START

SL-MeasIdList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasIdInfo-r16
```

```

SL-MeasIdInfo-r16 ::=
    sl-MeasId-r16
    sl-MeasObjectId-r16
    sl-ReportConfigId-r16
    ...
}

SL-MeasId-r16 ::=
    INTEGER (1..maxNrofSL-MeasId-r16)

-- TAG-SL-MEASIDLIST-STOP
-- ASN1STOP

```

– *SL-MeasObjectList*

The IE *SL-MeasObjectList* concerns a list of SL measurement objects to add or modify for a destination.

SL-MeasObjectList information element

```

-- ASN1START
-- TAG-SL-MEASOBJECTLIST-START

SL-MeasObjectList-r16 ::=
    SEQUENCE (SIZE (1..maxNrofSL-ObjectId-r16)) OF SL-MeasObjectInfo-r16

SL-MeasObjectInfo-r16 ::=
    SEQUENCE {
        sl-MeasObjectId-r16
        sl-MeasObject-r16
        ...
    }

SL-MeasObjectId-r16 ::=
    INTEGER (1..maxNrofSL-ObjectId-r16)

SL-MeasObject-r16 ::=
    SEQUENCE {
        frequencyInfoSL-r16
        ...
    }

-- TAG-SL-MEASOBJECTLIST-STOP
-- ASN1STOP

```

| SL-MeasObjectList field descriptions |
|--|
| frequencyInfoSL
It indicates the lowest usable subcarrier on the carrier where SL RSRP is measured, determined according to <i>sl-AbsoluteFrequencyPointA</i> in IE <i>SL-FreqConfig/SL-FreqConfigCommon</i> and <i>offsetToCarrier</i> in IE <i>SCS-SpecificCarrier</i> configured for <i>sl-SCS-SpecificCarrierList</i> in IE <i>SL-FreqConfig/SL-FreqConfigCommon</i> . See TS 38.211 [16], clause 8.2.5. |
| sl-MeasObjectId
It is used to identify a sidelink measurement object configuration. |
| sl-MeasObject
It specifies information applicable for sidelink DMRS, SL-PRS measurement. |

– SL-PagingIdentityRemoteUE

The IE *SL-PagingIdentityRemoteUE* includes the Remote UE's paging UE ID.

SL-PagingIdentityRemoteUE information element

```
-- ASN1START
-- TAG-SL-PAGINGIDENTITYREMOTEUE-START

SL-PagingIdentityRemoteUE-r17 ::= SEQUENCE {
    ng-5G-S-TMSI-r17          NG-5G-S-TMSI,
    fullI-RNTI-r17            I-RNTI-Value          OPTIONAL  -- Need R
}

-- TAG-SL-PAGINGIDENTITYREMOTEUE-STOP
-- ASN1STOP
```

– SL-PBPS-CPS-Config

The IE *SL-PBPS-CPS-Config* specifies the operation information for a resource pool which can be (pre-)configured to enable full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof.

SL-PBPS-CPS-Config information element

```
-- ASN1START
-- TAG-SL-PBPS-CPS-CONFIG-START

SL-PBPS-CPS-Config-r17 ::=
sl-AllowedResourceSelectionConfig-r17    SEQUENCE {
sl-MinNumCandidatesSlotsPeriodic-r17    ENUMERATED {c1, c2, c3, c4, c5, c6, c7}    OPTIONAL,  -- Need M

| -- TAG-SL-PBPS-CPS-CONFIG-STOP | | | |
| -- ASN1STOP | | | |

| SL-PBPS-CPS-Config field descriptions | |
|---|--|
| <i>sl-Additional-PBPS-Occasion</i> | Indicates that UE additionally monitors periodic sensing occasions that correspond to a set of values. (see TS 38.214 [19], clause 8.1.4). |
| <i>sl-AllowedResourceSelectionConfig</i> | Indicates the allowed resource selection mechanism(s), i.e. full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof. (see TS 38.214 [19], clause 8.1.4). Only <i>c1</i> , <i>c4</i> , <i>c5</i> or <i>c7</i> can be configured for a Rel-16 resource pool. Only <i>c1</i> can be configured for a resource pool included in <i>sl-TxPoolSelectedNormal</i> , for which <i>sl-NRPSFCH-EUTRA-ThresRSRP-List/sl-NRPSSCH-EUTRA-ThresRSRP-List</i> is configured. If this field is not configured for a resource pool included in <i>sl-TxPoolSelectedNormal</i> , only full sensing is allowed in the corresponding resource pool.
<i>c1</i> : only full sensing allowed
<i>c2</i> : only partial sensing allowed
<i>c3</i> : only random selection allowed
<i>c4</i> : full sensing+random selection allowed
<i>c5</i> : full sensing+ partial sensing allowed
<i>c6</i> : partial sensing + random selection allowed
<i>c7</i> : full sensing+ partial sensing + random selection allowed. |
| <i>sl-CPS-WindowAperiodic</i> | Parameter that indicates the minimum size of contiguous partial sensing window in logical slot units for a resource (re)selection procedure and re-evaluation/pre-emption checking triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4). If not configured, the size of contiguous partial sensing window in logical slot units is 31. |
| <i>sl-CPS-WindowPeriodic</i> | Indicates the size of contiguous partial sensing window in logical slot units when UE performs periodic-based and contiguous partial sensing for a resource (re)selection procedure triggered by periodic transmission. If not configured, the size of contiguous partial sensing window in logical slot units is 31. |
| <i>sl-DefaultCBR-PartialSensing</i> | Indicates default value of SL CBR measurement for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured) if the number of SL RSSI measurement slots over CBR measurement window is below <i>sl-MinNumRssiMeasurementSlots</i> , (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on. |
| <i>sl-DefaultCBR-RandomSelection</i> | Indicates default value of CBR measurement for a UE that performs random resource selection if no SL CBR measurement result over SL CBR measurement window, (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on. |
| <i>sl-MinNumCandidateSlotsAperiodic</i> | Indicates the minimum number of Y slots that are included in the possible candidate resources corresponding to periodic-based partial sensing and/or contiguous partial sensing for resource (re)selection triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4). |
| <i>sl-MinNumCandidateSlotsPeriodic</i> | Indicates the minimum number of Y slots that are included in the possible candidate resources corresponding to periodic-based partial sensing for resource (re)selection triggered by periodic transmission. (see TS 38.214 [19], clause 8.1.4). |
| <i>sl-MinNumRssiMeasurementSlots</i> | Indicates a threshold for a minimum number of SL RSSI measurement slots over CBR measurement window for which the SL RSSI is measured for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured). (see TS 38.214 [19], clause 8.1.6). |
| <i>sl-PartialSensingInactiveTime</i> | Indicates whether or not UE is required to perform SL reception of PSCCH and RSRP measurement for partial sensing on slots in SL DRX inactive time when partial sensing is configured by its higher layer. (see TS 38.214 [19], clause 8.1.4). |
| <i>sl-PBPS-OccasionReservePeriodList</i> | Indicates the subset of periodicity values from <i>sl-ResourceReservePeriodList</i> used to determine periodic sensing occasions in periodic-based partial sensing, by means of an index to the corresponding entry in <i>sl-ResourceReservePeriodList-r16</i> . If not configured, all periodicity values from <i>sl-ResourceReservePeriodList</i> are used to determine periodic sensing occasions in periodic-based partial sensing (see TS 38.214 [19], clause 8.1.4). |

– *SL-PDCP-Config*

The IE *SL-PDCP-Config* is used to set the configurable PDCP parameters for a sidelink radio bearer.

***SL-PDCP-Config* information element**

```
-- ASN1START
-- TAG-SL-PDCP-CONFIG-START

SL-PDCP-Config-r16 ::=          SEQUENCE {
    sl-DiscardTimer-r16          ENUMERATED {ms3, ms10, ms20, ms25, ms30, ms40, ms50, ms60, ms75, ms100, ms150, ms200,
                                         ms250, ms300, ms500, ms750, ms1500, infinity}          OPTIONAL, -- Cond Setup

    sl-OutOfOrderDelivery        ENUMERATED { true }          OPTIONAL, -- Need R
    ...
}

-- TAG-SL-PDCP-CONFIG-STOP
-- ASN1STOP
```

| <i>SL-PDCP-Config</i> field descriptions | |
|--|--|
| <i>sl-DiscardTimer</i> | Value in ms of <i>discardTimer</i> specified in TS 38.323 [5]. Value <i>ms50</i> corresponds to 50 ms, value <i>ms100</i> corresponds to 100 ms and so on. |
| <i>sl-OutOfOrderDelivery</i> | Indicates whether or not <i>outOfOrderDelivery</i> specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the radio bearer is established. |
| <i>sl-PDCP-SN-Size</i> | PDCP sequence number size for unicast NR sidelink communication, 12 or 18 bits, as specified in TS 38.323 [5]. For groupcast and broadcast NR sidelink communication, only 12 bits is applicable, as specified in 9.1.1.5. |

| Conditional Presence | Explanation |
|----------------------|--|
| <i>Setup</i> | The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M. |
| <i>Setup2</i> | The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration for RLC-AM and RLC-UM for unicast NR sidelink communication; otherwise the field is not present, Need M. |

- *SL-PosBWP-ConfigCommon*

The IE *SL-PosBWP-ConfigCommon* is used to configure the cell-specific configuration for sidelink positioning on one particular sidelink bandwidth part.

***SL-PosBWP-ConfigCommon* information element**

SL-PRS-ResourcePool field descriptions

sl-CBR-ConfigIndexDedicatedSL-PRS-RP

Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in *sl-CBR-RangeDedicatedSL-PRS-RP-List*.

sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List

Indicates the mapping between SL-PRS transmission parameter (such as transmission power, etc.) sets by using the indexes of the configurations in *sl-CBR-SL-PRS-TxConfigList*, CBR ranges by using the indexes to the entry of the CBR range configurations in *sl-CBR-RangeDedicatedSL-PRS-RP-List*, and priority ranges. It also indicates the default SL-PRS transmission parameters to be used when CBR measurement results are not available.

sl-DefaultTxConfigIndexDedicatedSL-PRS-RP

Indicates the SL PRS transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in *sl-PRS-TxConfigIndexList*. Value 0 indicates the first entry in *sl-PRS-TxConfigIndexList*. The field is ignored if the UE has available CBR measurement results.

sl-FilterCoefficient

This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control.

sl-MaxNumPerReserveDedicatedSL-PRS-RP

Indicates the maximum number of SL PRS reservations that can be indicated by an SCI.

sl-NumReservedBitsSCI1B-DedicatedSL-PRS-RP

Indicates the number of reserved bits in SCI format 1-B.

sl-NumSubchannelDedicatedSL-PRS-RP

Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only.

sl-PosAllowedResourceSelectionConfig

Indicates allowed resource allocation method configured per resource pool.

c1: only sensing allowed

c2: only random resource selection allowed

c3: sensing and random resource selection allowed

sl-PreemptionEnableDedicatedSL-PRS-RP

| |
|---|
| Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is <i>pl1</i> , <i>pl2</i> , and so on (but not <i>enabled</i>), it means that pre-emption is enabled and a priority level <i>p_preemption</i> is configured. If the field is present and the value is <i>enabled</i> , the pre-emption is enabled (but <i>p_preemption</i> is not configured) and pre-emption is applicable to all levels. |
| <i>sl-PriorityThreshold</i>
Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0. |
| <i>sl-PriorityThresholdDedicatedSL-PRS-RP</i>
Indicates the upper bound of priority range which is associated with the configurations in <i>sl-CBR-ConfigIndexDedicatedSL-PRS-RP</i> and in <i>sl-PRS-TxConfigIndexList</i> . The upper bounds of the priority ranges are configured in ascending order for consecutive entries of <i>SL-PriorityTxConfigIndexDedicatedSL-PRS-RP</i> in <i>sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List</i> . For the first entry of <i>sl-PriorityThreshold-DedicatedSL-PRS-RP</i> , the lower bound of the priority range is 1. |
| <i>sl-PriorityThreshold-UL-URLLC</i>
Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0. |
| <i>sl-PRS-ResourceReservePeriodList</i>
Indicates set of possible resource reservation period in the unit of ms allowed in the resource pool. Up to 16 values can be configured per resource pool. The value <i>ms0</i> is always configured. |
| <i>sl-PRS-ResourcesDedicatedSL-PRS-RP</i>
Indicates SL PRS resources in a slot of dedicated SL PRS resource pool as defined in TS 38.211 [16]. |
| <i>sl-PRS-TxConfigIndexList</i>
Indicates list of <i>SL-PRS-Tx-ConfigIndex</i> indicating the SL PRS transmission configuration index. |
| <i>sl-RB-Number</i>
Indicates the number of PRBs in the corresponding SL PRS dedicated resource pool, which consists of contiguous PRBs only. |
| <i>sl-SCI-basedSL-PRS-TxTriggerSCI1-B</i>
Indicates presence of a bit-field in SCI format 1-B to trigger SL-PRS transmission by a receiving UE. |
| <i>sl-SelectionWindowListDedicatedSL-PRS-RP</i>
Parameter that determines the end of the selection window in the resource selection for a SL-PRS with respect to priority indicated in SCI. Value <i>n1</i> corresponds to $1 \cdot 2^\mu$, value <i>n5</i> corresponds to $5 \cdot 2^\mu$, and so on, where $\mu = 0, 1, 2, 3$ refers to SCS 15, 30, 60, 120 kHz respectively. |
| <i>sl-SensingWindowDedicatedSL-PRS-RP</i>
Indicates the start of the sensing window for SL PRS in a dedicated resource pool. |
| <i>sl-SRC-ID-LenDedicatedSL-PRS-RP</i>
Indicates the number of bits used for the source ID in SCI format 1-B. |
| <i>sl-StartRB-SubchannelDedicatedSL-PRS-RP</i>
Indicates the lowest RB index of the SL PRS dedicated resource pool with respect to the lowest RB index of a SL BWP. |
| <i>sl-SubchannelSizeDedicatedSL-PRS-RP</i>
Indicates size of a subchannel for PSCCH in number of RBs. |
| <i>sl-Thresh-RSRP-ListDedicatedSL-PRS-RP</i>
Indicates a list of 64 thresholds, the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted. |
| <i>sl-ThreshS-RSSI-PRS-CBR</i>
Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the SL-PRS CBR measurement in a dedicated SL-PRS resource pool. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value <i>n</i> to $(-112 + n \cdot 2)$ dBm, and so on. |
| <i>sl-TimeResource</i> |

| |
|---|
| This field indicates the bitmap of the SL PRS dedicated resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle. |
| sl-TimeWindowSizeCBR-DedicatedSL-PRS-RP
Indicates the time window size for CBR measurement in a dedicated SL-PRS resource pool. |
| sl-TimeWindowSizeCR-DedicatedSL-PRS-RP
Indicates the time window size for CR evaluation in a dedicated SL-PRS resource pool. |
| sl-TxPercentageDedicatedSL-PRS-RP-List
Indicates list of minimum Tx percentage (list per priority). |

| SL-PSCCH-ConfigDedicatedSL-PRS-RP field descriptions |
|---|
| sl-DMRS-ScrambleID-DedicatedSL-PRS-RP
Indicates the initialization value for PSCCH DMRS scrambling in a dedicated SL PRS resource pool. |
| sl-FreqResourcePSCCH-DedicatedSL-PRS-RP
Indicates the number of PRBs for PSCCH in a dedicated SL PRS resource pool. |
| sl-TimeResourcePSCCH-DedicatedSL-PRS-RP
Indicates the number of symbols for PSCCH in a dedicated SL PRS resource pool. |

| SL-PRS-PowerControl field descriptions |
|---|
| dl-P0-SL-PRS
Indicates P0 value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool. |
| dl-Alpha-SL-PRS
Indicates alpha value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool. |
| sl-P0-SL-PRS
Indicates P0 value for SL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool. |
| sl-Alpha-SL-PRS
Indicates alpha value for SL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool. When the field is absent the UE applies the value 1. |

– SL-PSBCH-Config

The IE *SL-PSBCH-Config* indicates PSBCH transmission parameters on each sidelink bandwidth part.

SL-PSBCH-Config information element

| | | | |
|------------------------------------|---|-----------|-----------|
| -- ASN1START | | | |
| -- TAG-SL-PSBCH-CONFIG-START | | | |
| SL-PSBCH-Config-r16 ::= SEQUENCE { | | | |

```
    ]]
  }

-- TAG-SL-PSBCH-CONFIG-STOP
-- ASN1STOP
```

| SL-PSBCH-Config field descriptions |
|--|
| dl-Alpha-PSBCH
Indicates alpha value for DL pathloss based power control for PSBCH. When the field is not configured the UE applies the value 1. |
| dl-P0-PSBCH
Indicates P0 value for DL pathloss based power control for PSBCH. If not configured, DL pathloss based power control is disabled for PSBCH. When <i>dl-P0-PSBCH-r17</i> is configured, the UE ignores <i>dl-P0-PSBCH-r16</i> .
A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSBCH when <i>dl-P0-PSBCH</i> is configured. |

– SL-PSSCH-TxConfigList

The IE *SL-PSSCH-TxConfigList* indicates PSSCH transmission parameters. When lower layers select parameters from the range indicated in IE *SL-PSSCH-TxConfigList*, the UE considers both configurations in IE *SL-PSSCH-TxConfigList* and the CBR-dependent configurations represented in IE *SL-CBR-PriorityTxConfigList*. Only one IE *SL-PSSCH-TxConfig* is provided per *SL-TypeTxSync*.

SL-PSSCH-TxConfigList information element

```
-- ASN1START
-- TAG-SL-PSSCH-TXCONFIGLIST-START

SL-PSSCH-TxConfigList-r16 ::= SEQUENCE (SIZE (1..maxPSSCH-TxConfig-r16)) OF SL-PSSCH-TxConfig-r16

SL-PSSCH-TxConfig-r16 ::= SEQUENCE {
    sl-TypeTxSync-r16          SL-TypeTxSync-r16                                OPTIONAL,    -- Need R
    sl-ThresUE-Speed-r16       ENUMERATED {kmph60, kmph80, kmph100, kmph120,
                                           kmph140, kmph160, kmph180, kmph200},
    sl-ParametersAboveThres-r16 SL-PSSCH-TxParameters-r16,
    sl-ParametersBelowThres-r16 SL-PSSCH-TxParameters-r16,
    ...,
    [[
    sl-ParametersAboveThres-v1650 SL-MinMaxMCS-List-r16                        OPTIONAL,    -- Need R
    sl-ParametersBelowThres-v1650 SL-MinMaxMCS-List-r16                        OPTIONAL,    -- Need R
    ]]
}

SL-PSSCH-TxParameters-r16 ::= SEQUENCE {
    sl-MinMCS-PSSCH-r16        INTEGER (0..27),
    sl-MaxMCS-PSSCH-r16        INTEGER (0..31),
    sl-MinSubChannelNumPSSCH-r16 INTEGER (1..27),
```

```
sl-MaxSubchannelNumPSSCH-r16    INTEGER (1..27),
sl-MaxTxTransNumPSSCH-r16      INTEGER (1..32),
sl-MaxTxPower-r16              SL-TxPower-r16
}
-- TAG-SL-PSSCH-TXCONFIGLIST-STOP
-- ASN1STOP
```

| SL-PSSCH-TxConfigList field descriptions | |
|---|---|
| sl-MaxTxTransNumPSSCH | Indicates the maximum transmission number (including new transmission and retransmission) for PSSCH. |
| sl-MaxTxPower | This field indicates the maximum transmission power for transmission on PSSCH and PSCCH. |
| sl-MinMCS-PSSCH, sl-MaxMCS-PSSCH | This field indicates the minimum and maximum MCS values used for transmissions on PSSCH. The UE shall ignore the minimum and maximum MCS values used for the associated MCS table(s) in <i>sl-ParametersAboveThres-r16</i> and <i>sl-ParametersBelowThres-r16</i> if <i>sl-ParametersAboveThres-v1650</i> and <i>sl-ParametersBelowThres-v1650</i> are present, respectively. |
| sl-MinSubChannelNumPSSCH, sl-MaxSubChannelNumPSSCH | This field indicates the minimum and maximum number of sub-channels which may be used for transmissions on PSSCH. |
| sl-TypeTxSync | This field indicates the synchronization reference type. For configurations by the eNB/gNB, only <i>gnbEnb</i> can be configured; and for pre-configuration or when this field is absent, the configuration is applicable for all synchronization reference types. |
| sl-ThresUE-Speed | This field indicates a UE absolute speed threshold. |

| Conditional Presence | Explanation |
|----------------------|---|
| CBR | The field is optionally present, Need R, when the IE <i>SL-PSSCH-TxParameters</i> is present in <i>SL-CBR-CommonTxConfigList</i> , <i>SL-UE-SelectedConfig</i> , <i>SIB12</i> or <i>SidelinkPreconfigNR</i> ; otherwise the field is not present, need R. |

– SL-QoS-FlowIdentity

The IE *SL-QoS-FlowIdentity* is used to identify a sidelink QoS flow.

SL-QoS-FlowIdentity information element

```
-- ASN1START
-- TAG-SL-QOS-FLOWIDENTITY-START

SL-QoS-FlowIdentity-r16 ::=
    INTEGER (1..maxNrofSL-QFIs-r16)

-- TAG-SL-QOS-FLOWIDENTITY-STOP
-- ASN1STOP
```

– SL-QoS-Profile

The IE *SL-QoS-Profile* is used to give the QoS parameters for a sidelink QoS flow. Need codes or conditions specified for *SL-QoS-Profile* do not apply, in case *SL-QoS-Profile* is included in *SidelinkUEInformationNR*.

SL-QoS-Profile information element

```
-- ASN1START
-- TAG-SL-QOS-PROFILE-START

SL-QoS-Profile-r16 ::=          SEQUENCE {
    sl-PQI-r16                  SL-PQI-r16                                OPTIONAL,  -- Need R
    sl-GFBR-r16                 INTEGER (0..4000000000)                OPTIONAL,  -- Need R
    sl-MFBR-r16                 INTEGER (0..4000000000)                OPTIONAL,  -- Need R
    sl-Range-r16                INTEGER (1..1000)                      OPTIONAL,  -- Need R
    ...
}

SL-PQI-r16 ::=                  CHOICE {
    sl-StandardizedPQI-r16      INTEGER (0..255),
    sl-Non-StandardizedPQI-r16  SEQUENCE {
        sl-ResourceType-r16      ENUMERATED {gbr, non-GBR, delayCriticalGBR, spare1}  OPTIONAL,  -- Need R
        sl-PriorityLevel-r16     INTEGER (1..8)                                     OPTIONAL,  -- Need R
        sl-PacketDelayBudget-r16 INTEGER (0..1023)                                OPTIONAL,  -- Need R
        sl-PacketErrorRate-r16   INTEGER (0..9)                                   OPTIONAL,  -- Need R
        sl-AveragingWindow-r16   INTEGER (0..4095)                               OPTIONAL,  -- Need R
        sl-MaxDataBurstVolume-r16 INTEGER (0..4095)                               OPTIONAL,  -- Need R
        ...
    }
}

-- TAG-SL-QOS-PROFILE-STOP
-- ASN1STOP
```

| SL-QoS-Profile field descriptions | |
|-----------------------------------|--|
| sl-GFBR | Indicate the guaranteed bit rate for a GBR QoS flow. The unit is: Kbit/s |
| sl-MFBR | Indicate the maximum bit rate for a GBR QoS flow. The unit is: Kbit/s |
| sl-PQI | This field indicates either the PQI for standardized PQI or non-standardized QoS parameters. |
| sl-Range | This field indicates the range parameter of the Qos flow, as defined in clause 5.4.1.1.1, TS 23.287 [55]. It is present only for groupcast. The unit is meter. |

| SL-PQI field descriptions |
|---|
| sl-AveragingWindow
Indicates the Averaging Window for a QoS flow, and applies to GBR QoS flows only. Unit: ms. The default value of the IE is 2000ms. |
| sl-MaxDataBurstVolume
Indicates the Maximum Data Burst Volume for a QoS flow, and applies to delay critical GBR QoS flows only. Unit: byte. |
| sl-PacketDelayBudget
Indicates the Packet Delay Budget for a QoS flow. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms. |
| sl-PacketErrorRate
Indicates the Packet Error Rate for a QoS flow. The packet error rate is expressed as Scalar x 10-k where k is the Exponent. |
| sl-PriorityLevel
Indicates the Priority Level for a QoS flow. Values ordered in decreasing order of priority, i.e. with 1 as the highest priority and 8 as the lowest priority. |
| sl-StandardizedPQI
Indicate the PQI for standardized PQI. |

— SL-QuantityConfig

The IE *SL-QuantityConfig* specifies the layer 3 filtering coefficients for NR SL RSRP measurement for a destination.

SL-QuantityConfig information element

```
-- ASN1START
-- TAG-SL-QUANTITYCONFIG-START

SL-QuantityConfig-r16 ::=
    SEQUENCE {
        sl-FilterCoefficientDMRS-r16      FilterCoefficient          DEFAULT fc4,
        ...
    }

-- TAG-SL-QuantityConfig-STOP
-- ASN1STOP
```

| SL-QuantityConfig field descriptions |
|--|
| sl-FilterCoefficientDMRS
DMRS based L3 filter configuration:
Specifies L3 filter configuration for sidelink RSRP measurement result from the L1 filter(s), as defined in TS 38.215 [9]. |

– *SL-RadioBearerConfig*

The IE *SL-RadioBearerConfig* specifies the sidelink DRB configuration information for NR sidelink communication.

***SL-RadioBearerConfig* information element**

```
-- ASN1START
-- TAG-SL-RADIOBEARERCONFIG-START

SL-RadioBearerConfig-r16 ::= SEQUENCE {
    slrb-Uu-ConfigIndex-r16          SLRB-Uu-ConfigIndex-r16,
    sl-SDAP-Config-r16              SL-SDAP-Config-r16          OPTIONAL,    -- Cond SLRBSetup
    sl-PDCP-Config-r16              SL-PDCP-Config-r16          OPTIONAL,    -- Cond SLRBSetup
    sl-TransRange-r16               ENUMERATED {m20, m50, m80, m100, m120, m150, m180, m200, m220, m250, m270, m300, m350, m370,
                                              m400, m420, m450, m480, m500, m550, m600, m700, m1000, spare9, spare8, spare7, spare6,
                                              spare5, spare4, spare3, spare2, spare1}    OPTIONAL,    -- Need R
    ...
}

-- TAG-SL-RADIOBEARERCONFIG-STOP
-- ASN1STOP
```

| SL-RadioBearerConfig field descriptions | |
|---|---|
| sl-PDCP-Config | This field indicates the PDCP parameters for the sidelink DRB. |
| sl-SDAP-Config | This field indicates how to map sidelink QoS flows to sidelink DRB. |
| slrb-Uu-ConfigIndex | This field indicates the index of sidelink DRB configuration. |
| sl-TransRange | This field indicates the transmission range of the sidelink DRB. The unit is meter. |

| Conditional Presence | Explanation |
|----------------------|--|
| SLRBSetup | The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M. |

– *SL-RBSetConfig*

The IE *SL-RBSetConfig* specifies the configuration information for RB set for NR Sidelink Communication.

***SL-RBSetConfig* information element**

```
-- ASN1START
```

```
-- TAG-SL-RBSETCONFIG-START
SL-RBSetConfig-r18 ::=
    sl-RBSetIndex-r18          INTEGER (0..4),
    sl-NumOfSSSBRepetition-r18 INTEGER (2..9)          OPTIONAL, -- Need R
    sl-GapBetweenSSSBRepetition-r18 INTEGER (1..84)    OPTIONAL -- Need R
}
-- TAG-SL-RBSETCONFIG-STOP
-- ASN1STOP
```

| SL-RBSetConfig field descriptions |
|---|
| sl-GapBetweenSSSBRepetition
Indicate the gap between two adjacent S-SSB repetitions in frequency domain in one RB set, and the gap is between the lowest subcarrier of the upper PSBCH and the highest subcarrier of the lower PSBCH. The Unit is PRB. |
| sl-NumOfSSSBRepetition
Indicate the number of S-SSB repetitions in frequency domain in one RB set. S-SSB in the frequency domain indicated by <i>sl-AbsoluteFrequencySSB</i> (i.e. S-SSB transmission without repetition) is applicable in region with no OCB requirement, or with OCB exemption. |
| sl-RBSetIndex
Indicates the index of RB-set for which the configuration applies. |

– SL-RelayIndicationMP

The IE *SL-RelayIndicationMP* is used to indicate the L2 U2N Relay UE supporting RRC connection establishment/resume for MP operation triggered by receiving *RemoteUEInformationSidelink* containing the *connectionForMP* as specified in 5.3.3.1a and 5.3.13.1a in Rel-18.

SL-RelayIndicationMP information element

```
-- ASN1START
-- TAG-SL-RELAYINDICATIONMP-START
SL-RelayIndicationMP-r18 ::= ENUMERATED {support}
-- TAG-SL-RELAYINDICATIONMP-STOP
-- ASN1STOP
```

– SL-RelayUE-Config

The IE *SL-RelayUE-Config* specifies the configuration information for NR sidelink U2N Relay UE.

SL-RelayUE-Config information element

```
-- ASN1START
```

```
-- TAG-SL-RELAYUE-CONFIG-START

SL-RelayUE-Config-r17::=      SEQUENCE {
    threshHighRelay-r17        RSRP-Range          OPTIONAL,  -- Need R
    threshLowRelay-r17         RSRP-Range          OPTIONAL,  -- Need R
    hystMaxRelay-r17           Hysteresis           OPTIONAL,  -- Cond ThreshHighRelay
    hystMinRelay-r17           Hysteresis           OPTIONAL,  -- Cond ThreshLowRelay
}

-- TAG-SL-RELAYUE-CONFIG-STOP
-- ASN1STOP
```

| SL-RelayUE-Config field descriptions | |
|--------------------------------------|--|
| threshHighRelay | Indicates the upper threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE or Last U2N Relay UE operation. |
| threshLowRelay | Indicates the lower threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE or Last U2N Relay UE operation. |

| Conditional Presence | Explanation |
|----------------------|---|
| ThreshHighRelay | This field is mandatory present if threshHighRelay is included. Otherwise, the field is absent, Need R. |
| ThreshLowRelay | This field is mandatory present if threshLowRelay is included. Otherwise, the field is absent, Need R. |

– SL-RelayUE-ConfigMH

The IE *SL-RelayUE-ConfigMH* specifies the threshold configuration information for NR sidelink Last U2N Relay UE or Intermediate U2N Relay UE or First U2N Relay UE during multi hop relay communication.

SL-RelayUE-ConfigMH information element

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIGMH-START

SL-RelayUE-ConfigMH-r19::=      SEQUENCE {
    sd-RSRP-ThreshDiscConfigMH-r19  SL-RSRP-Range-r16,
    sd-hystMaxRelayMH-r19            Hysteresis
}

-- TAG-SL-RELAYUE-CONFIGMH-STOP
-- ASN1STOP
```

SL-RelayUE-ConfigMH* field descriptions**sd-RSRP-ThreshDiscConfigMH***

Indicates the threshold of SD-RSRP for an Last U2N Relay UE or Intermediate U2N Relay UE to evaluate AS layer conditions for discovery. The Last U2N relay UE applies the value of this field to evaluate AS layer conditions to decide whether to respond to the discovery solicitation message when performing the multi hop U2N Relay Discovery with Model B as specified in TS 23.304 [65]. The Intermediate U2N relay UE or the First U2N relay UE applies the value of this field to evaluate AS layer conditions to decide whether to forward the discovery solicitation message when performing the multi hop U2N Relay Discovery with Model B as specified in TS 23.304 [65].

– ***SL-RelayUE-ConfigU2U***

The IE *SL-RelayUE-ConfigU2U* specifies the threshold configuration information for NR sidelink U2U Relay UE.

***SL-RelayUE-ConfigU2U* information element**

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIGU2U-START

SL-RelayUE-ConfigU2U-r18 ::= SEQUENCE {
    sl-RSRP-Thresh-DiscConfig-r18    SL-RSRP-Range-r16          OPTIONAL, -- Need R
    sd-RSRP-ThreshDiscConfig-r18    SL-RSRP-Range-r16          OPTIONAL, -- Need R
    sd-hystMaxRelay-r18              Hysteresis                  OPTIONAL, -- Cond SD-RSRP-ThreshRelay
}

SL-RelayUE-ConfigU2U-v1840 ::= SEQUENCE {
    sl-FilterCoefficientU2U-r18      FilterCoefficient          OPTIONAL, -- Need R
    sd-FilterCoefficientU2U-r18      FilterCoefficient          OPTIONAL, -- Need R
    ...
}

-- TAG-SL-RELAYUE-CONFIGU2U-STOP
-- ASN1STOP
```

SL-RelayUE-ConfigU2U* field descriptions**sd-FilterCoefficientU2U***

Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurements.

sd-RSRP-ThreshDiscConfig

Indicates the threshold of SD-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to evaluate AS layer conditions to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A, and decide whether to forward the discovery message when performing the U2U Relay Discovery with Model B or U2U relay communication with integrated Discovery as specified in TS 23.304 [65].

sl-FilterCoefficientU2U

Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter.

sl-RSRP-Thresh-DiscConfig

Indicates the threshold of SL-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A.

| Conditional Presence | Explanation |
|----------------------------|---|
| <i>SD-RSRP-ThreshRelay</i> | This field is mandatory present if <i>sd-RSRP-ThreshDiscConfig</i> is included. Otherwise, the field is absent, Need R. |

– *SL-RemoteUE-Config*

The IE *SL-RemoteUE-Config* specifies the configuration information for NR sidelink U2N Remote UE.

***SL-RemoteUE-Config* information element**

```
-- ASN1START
-- TAG-SL-REMOTEUE-CONFIG-START

SL-RemoteUE-Config-r17 ::=
    threshHighRemote-r17          SEQUENCE {
                                   RSRP-Range          OPTIONAL,      -- Need R
                                   hystMaxRemote-r17     OPTIONAL,      -- Cond ThreshHighRemote
                                   sl-ReselectionConfig-r17 SL-ReselectionConfig-r17 OPTIONAL      -- Need R
    }

SL-ReselectionConfig-r17 ::=
    sl-RSRP-Thresh-r17            SEQUENCE {
                                   SL-RSRP-Range-r16    OPTIONAL,      -- Need R
                                   sl-FilterCoefficientRSRP-r17 FilterCoefficient OPTIONAL,      -- Need R
                                   sl-HystMin-r17        Hysteresis      OPTIONAL      -- Cond SL-RSRP-Thresh
    }

-- TAG-SL-REMOTEUE-CONFIG-STOP
-- ASN1STOP
```

| <i>SL-RemoteUE-Config</i> field descriptions |
|--|
| <i>sl-ReselectionConfig</i>
Includes the parameters used by the U2N remote UE when selecting/ reselecting a U2N relay UE. |
| <i>threshHighRemote</i>
Indicates the threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N remote UE operation. |

| <i>SL-ReselectionConfig</i> field descriptions |
|---|
| <i>sl-FilterCoefficientRSRP</i>
Specifies L3 filter coefficient for SL communication/ discovery RSRP measurement results from L1 filter. |
| <i>sl-RSRP-Thresh</i>
Indicates the threshold of SL communication/ discovery RSRP for a U2N remote UE to perform relay UE selection/ reselection. |

| Conditional Presence | Explanation |
|-------------------------|---|
| <i>SL-RSRP-Thresh</i> | This field is mandatory present if <i>sl-RSRP-Thresh</i> is included. Otherwise, the field is absent, Need R. |
| <i>ThreshHighRemote</i> | This field is mandatory present if <i>threshHighRemote</i> is included. Otherwise, the field is absent, Need R. |

– *SL-RemoteUE-ConfigU2U*

The IE *SL-RemoteUE-ConfigU2U* specifies the threshold configuration information for NR sidelink U2U Remote UE.

***SL-RemoteUE-ConfigU2U* information element**

```
-- ASN1START
-- TAG-SL-REMOTEUE-CONFIGU2U-START

SL-RemoteUE-ConfigU2U-r18 ::=          SEQUENCE {
    sl-RSRP-ThreshU2U-r18              SL-RSRP-Range-r16                OPTIONAL,      -- Need R
    sl-HystMinU2U-r18                  Hysteresis                       OPTIONAL,      -- Cond SL-RSRP-ThreshU2U
    sd-RSRP-ThreshU2U-r18              SL-RSRP-Range-r16                OPTIONAL,      -- Need R
    sd-FilterCoefficientU2U-r18        FilterCoefficient                OPTIONAL,      -- Need R
    sd-HystMinU2U-r18                  Hysteresis                       OPTIONAL,      -- Cond SD-RSRP-ThreshU2U
}

SL-RemoteUE-ConfigU2U-v1830 ::=      SEQUENCE {
    sl-FilterCoefficientU2U-r18        FilterCoefficient                OPTIONAL,      -- Need R
    ...
}

-- TAG-SL-REMOTEUE-CONFIGU2U-STOP
-- ASN1STOP
```

| SL-RemoteUE-ConfigU2U field descriptions | |
|--|---|
| sl-FilterCoefficientU2U | Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter. |
| sl-RSRP-ThreshU2U | Indicates the threshold of SL-RSRP for a U2U Remote UE to perform Relay UE selection/ reselection. The U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link with the peer U2U Remote UE to trigger relay selection, and evaluate AS layer conditions on U2U relay link with U2U Relay UE to trigger relay reselection. |
| sd-RSRP-ThreshU2U | Indicates the threshold of SD-RSRP for a U2U Remote UE to perform discovery and Relay UE selection/ reselection. For discovery, the U2U Remote UE applies the value of this field to evaluate AS layer conditions to decide whether to respond the discovery message when performing the U2U Relay Discovery with Model B as specified in TS 23.304 [65]. For relay selection and reselection, the U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link to trigger relay selection, and evaluate AS layer conditions on U2U relay link to trigger relay reselection. The target U2U remote UE applies the value of this field to evaluate AS layer conditions trigger relay selection when performing U2U relay communication with integrated Discovery as specified in TS 23.304 [65]. |
| sd-FilterCoefficientU2U | Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurement. |

| Conditional Presence | Explanation |
|----------------------|--|
| SL-RSRP-ThreshU2U | This field is mandatory present if <i>sl-RSRP-ThreshU2U</i> is included. Otherwise, the field is absent, Need R. |
| SD-RSRP-ThreshU2U | This field is mandatory present if <i>sd-RSRP-ThreshU2U</i> is included. Otherwise, the field is absent, Need R. |

– SL-ReportConfigList

The IE *SL-ReportConfigList* concerns a list of SL measurement reporting configurations to add or modify for a destination.

SL-ReportConfigList information element

```
-- ASN1START
-- TAG-SL-REPORTCONFIGLIST-START

SL-ReportConfigList-r16 ::=          SEQUENCE (SIZE (1..maxNrofSL-ReportConfigId-r16)) OF SL-ReportConfigInfo-r16

SL-ReportConfigInfo-r16 ::=          SEQUENCE {
    sl-ReportConfigId-r16              SL-ReportConfigId-r16,
    sl-ReportConfig-r16                SL-ReportConfig-r16,
    ...
}

SL-ReportConfigId-r16 ::=            INTEGER (1..maxNrofSL-ReportConfigId-r16)

SL-ReportConfig-r16 ::=              SEQUENCE {
    sl-ReportType-r16                  CHOICE {
        sl-Periodical-r16              SL-PeriodicalReportConfig-r16,
        sl-EventTriggered-r16          SL-EventTriggerConfig-r16,
        ...
    }
}
```

```

| SL-ReportConfig field descriptions |
|---|
| sl-ReportType
Type of the configured sidelink measurement report. |

| SL-EventTriggerConfig field descriptions |
|--|
| sl-EventId
Choice of sidelink measurement event triggered reporting criteria. |
| sl-ReportAmount
Number of sidelink measurement reports applicable for <i>sl-EventTriggered</i> report type. |
| sl-ReportInterval
Indicates the interval between periodical reports (i.e., when <i>sl-ReportAmount</i> exceeds 1) for <i>sl-EventTriggered</i> report type. |
| sl-ReportOnLeave
indicates whether or not the UE shall initiate the sidelink measurement reporting procedure when the leaving condition is met for a frequency in <i>sl-FrequencyTriggeredList</i> , as specified in 5.8.10.4.1. |
| sl-ReportQuantity
The sidelink measurement quantities to be included in the sidelink measurement report. |
| sl-TimeToTrigger
Time during which specific criteria for the event needs to be met in order to trigger a sidelink measurement report. |
| sN-Threshold
Threshold used for events S1 and S2 specified in clauses 5.8.10.4.2 and 5.8.10.4.3, respectively. |

| SL-PeriodicalReportConfig field descriptions |
|---|
| sl-ReportAmount
Number of sidelink measurement reports applicable for <i>sl-Periodical</i> report type. |
| sl-ReportInterval
Indicates the interval between periodical reports (i.e., when <i>sl-ReportAmount</i> exceeds 1) for <i>sl-Periodical</i> report type. |
| sl-ReportQuantity
The sidelink measurement quantities to be included in the sidelink measurement report. |

– SL-ResourcePool

The IE *SL-ResourcePool* specifies the configuration information for NR sidelink communication resource pool.

-- ASN1STOP

```

| SL- <i>ZoneConfigMCR</i> field descriptions | |
|---|--|
| <i>sl-TransRange</i> | Indicates the communication range requirement for the corresponding <i>sl-ZoneConfigMCR-Index</i> . The unit is meter. |
| <i>sl-ZoneConfig</i> | Indicates the zone configuration for the corresponding <i>sl-ZoneConfigMCR-Index</i> . |
| <i>sl-ZoneConfigMCR-Index</i> | Indicates the codepoint of the communication range requirement field in SCI. |

| SL-ResourcePool field descriptions |
|---|
| <i>dummy, dummy1</i>
This field is not used in the specification. If received it shall be ignored by the UE. |
| <i>numSym-SL-PRS-2ndStageSCI</i>
Indicates the number symbols to be assumed for SL PRS in determining the number of coded modulation symbols for second stage SCI in a slot of a shared SL PRS resource pool. |
| <i>sl-A2X-Service</i>
Presence of this field indicates the resource pool is dedicated for A2X service, i.e., not to be used for other than A2X service. Value <i>brid</i> indicates the resource pool is for BRID, value <i>daa</i> indicates the resource pool is for DAA, and value <i>bridAndDAA</i> indicates the resource pool is for both BRID and DAA. If this field is absent in all the configured resource pools, the UE may choose non-dedicated resource pool for A2X service. |
| <i>sl-Additional-MCS-Table</i>
Indicates the MCS table(s) additionally used in the resource pool. 64QAM table is (pre-)configured as default. Zero, one or two can be additionally (pre-)configured using the 256QAM and/or low-SE MCS tables. If two MCS tables are indicated, 256QAM MCS table is the 1 st table and qam64lowSE MCS table is the 2 nd table as specified in TS 38.214 [19], clause 8.1.3.1. |
| <i>sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-Default</i>
Indicates CPE starting position index for the default CPE starting position, to be used for PSCCH/PSSCH transmission when UE initiating a COT. |
| <i>sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-List</i>
Indicates a set of selected indices that correspond to multiple candidate CPE starting positions to be used for PSCCH/PSSCH transmission when UE initiating a COT, associated per L1 priority of PSSCH. |
| <i>sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-Default</i>
Indicates CPE starting position index for the default CPE starting position, to be used by UE for PSCCH/PSSCH transmission within a COT. |
| <i>sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-List</i>
Indicates a set of one or multiple selected indices that correspond to one or multiple candidate CPE starting positions to be used by UE for PSCCH/PSSCH transmission within a COT, associated per L1 priority of PSSCH. |
| <i>sl-CPE-StartingPositionPSFCH</i>
Indicates CPE starting position within the GP symbol before PSFCH transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS38.211] for Ci=1 and the corresponding SCS of the SL BWP. |
| <i>sl-FilterCoefficient</i>
This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control. |
| <i>sl-InterUE-CoordinationConfig</i>
Indicates the configured sidelink inter-UE coordination parameters. |
| <i>sl-IUC-RB-SetList</i>
The n-th value in the list indicates the set of PRBs of n-th PSFCH occasion that are actually used for inter-UE coordination information transmission and reception in Scheme 2. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with <i>sl-NumPSFCH-Occasions</i> . For each PSFCH occasion, the set of PRBs are indicated in the same format as in <i>sl-PSFCH-RB-Set</i> . |
| <i>sl-NumDedicatedPRBs-ForPSFCH</i>
Indicates the value of K3 when each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)" (as indicated by <i>sl-TransmissionStructureForPSFCH</i>). Value prb1 corresponds to K3=1, value prb2 corresponds to K3=2, and so on. UE expects the same (pre-)configured value of <i>sl-NumDedicatedPRBs-ForPSFCH</i> across all resource pools. |

| |
|--|
| <i>sl-NumInterlacePerSubchannel</i> |
| Indicates the number of (K) interlaces per sub-channel within a resource pool. Value <i>sc1</i> corresponds to 1 interlace per sub-channel, and value <i>sc2</i> corresponds to 2 interlaces per sub-channel. The applicable values are related to the subcarrier spacing as below:
For SCS = 15 kHz: K=1 or 2
For SCS = 30 kHz: K=1 |
| <i>sl-NumPSFCH-Occasions</i> |
| Indicates one PSCCH/PSSCH transmission has N associated candidate PSFCH occasion(s). Value <i>o1</i> corresponds to N=1, value <i>o2</i> corresponds to N=2, and so on. If the field is not configured, the UE shall use value <i>o1</i> . |
| <i>sl-NumReferencePRBs-OfInterlace</i> |
| Indicate reference number of PRBs of one interlace within 1 RB set. Value <i>prb10</i> corresponds to 10 PRBs, and value <i>prb11</i> corresponds to 11 PRBs. |
| <i>sl-NumRefSymbolLength</i> |
| Indicates a reference number of symbols for TBS determination. |
| <i>sl-NumSubchannel</i> |
| Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only. |
| <i>sl-PBPS-CPS-Config</i> |
| Indicates the allowed resource allocation schemes of full sensing only, partial sensing only, random resource selection only, or any combination(s), and the related configuration for power saving resource allocation schemes. This field is absent for <i>sl-TxPoolExceptional</i> . |
| <i>sl-PreemptionEnable</i> |
| Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is <i>p1</i> , <i>p2</i> , and so on (but not <i>enabled</i>), it means that pre-emption is enabled and a priority level <i>p_preemption</i> is configured. If the field is present and the value is <i>enabled</i> , the pre-emption is enabled (but <i>p_preemption</i> is not configured) and pre-emption is applicable to all levels. |
| <i>sl-PriorityThreshold-UL-URLLC</i> |
| Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0. |
| <i>sl-PriorityThreshold</i> |
| Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0. |
| <i>sl-PRS-ResourcesSharedSL-PRS-RP</i> |
| Indicates SL PRS resources in a slot of shared SL PRS resource pool as defined in TS 38.211 [16]. The UE can use the resource pool to transmit or receive SL-PRS only if this field is present. |
| <i>sl-PSFCH-CommonInterlaceIndex</i> |
| Indicate the index of common interlace to meet OCB requirements when <i>transmissionStructureForPSFCH</i> is set to common interlace. Value 0 corresponds to interlace 0 is used as common interlace, value 1 corresponds to interlace 1 is used as common interlace and so on. |
| <i>sl-PSFCH-PowerOffset</i> |
| Indicates the power offset between Tx power on one common PRB (<i>P_common</i>) and Tx power on one dedicated PRB (<i>P_dedicated</i>) when <i>sl-TransmissionStructureForPSFCH</i> is (pre-)configured as <i>commonInterlace</i> , i.e., $P_{common} = P_{dedicated} - offset$. UE expects the same (pre-)configured value of <i>sl-PSFCH-PowerOffset</i> across all resource pools. The unit is dB. |
| <i>sl-PSFCH-RB-SetList</i> |
| The n-th value in the list indicates the set of PRBs that are actually used for PSFCH transmission and reception of n-th PSFCH occasion of a PSCCH/PSSCH transmission. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with <i>sl-NumPSFCH-Occasions</i> . For each PSFCH occasion, the set of PRBs are indicated in the same format as in <i>sl-PSFCH-RB-Set</i> . |

| |
|---|
| <i>sl-RB-Number</i> |
| Indicates the number of PRBs in the corresponding resource pool, which consists of contiguous PRBs only. The remaining RB cannot be used (See TS 38.214[19], clause 8). |
| <i>sl-RBSetIndexOfResourcePool</i> |
| For interlace RB based PSSCH/PSSCH, indicates the RB set index(s) included in the resource pool. Contiguous RB sets are (pre-)configured for a resource pool. |
| <i>sl-SCI-basedSL-PRS-TxTriggerSCI2-D</i> |
| Indicates presence of a bit-field in SCI format 2-D to trigger SL-PRS transmission by a receiving UE. |
| <i>sl-StartRB-Subchannel</i> |
| Indicates the lowest RB index of the subchannel with the lowest index in the resource pool with respect to the lowest RB index of a SL BWP. |
| <i>sl-SubchannelSize</i> |
| Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB. |
| <i>sl-SyncAllowed</i> |
| Indicates the allowed synchronization reference(s) which is (are) allowed to use the configured resource pool. |
| <i>sl-SyncConfigIndex</i> |
| Indicates the synchronisation configuration that is associated with a reception pool, by means of an index to the corresponding entry <i>SL-SyncConfigList</i> of in <i>SIB12</i> for NR sidelink communication. |
| <i>sl-TDD-Configuration</i> |
| Indicates the TDD configuration associated with the reception pool of the cell indicated by <i>sl-SyncConfigIndex</i> . |
| <i>sl-ThreshS-RSSI-CBR</i> |
| Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the CBR measurement. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to $(-112 + n \cdot 2)$ dBm, and so on. |
| <i>sl-TimeResource</i> |
| Indicates the bitmap of the resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle. |
| <i>sl-TimeWindowSizeCBR</i> |
| Indicates the time window size for CBR measurement. |
| <i>sl-TimeWindowSizeCR</i> |
| Indicates the time window size for CR evaluation. |
| <i>sl-TransmissionStructureForPSFCH</i> |
| Indicate each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)", or "1 dedicated interlace". Value <i>commonInterlace</i> corresponds to "1 common interlace and K3 dedicated PRB(s)", and value <i>dedicatedInterlace</i> corresponds to "1 dedicated interlace". UE expects the same (pre-)configured value of <i>transmissionStructureForPSFCH</i> across all resource pools. |
| <i>sl-TxPercentageList</i> |
| Indicates the portion of candidate single-slot PSSCH resources over the total resources. Value p20 corresponds to 20%, and so on. |
| <i>sl-Type1-LBT-BlockingOption1</i> |
| Indicates UE may avoid selection of N consecutive resource(s) before a reserved resource of another UE when the L1 SL priority value for the transmission is higher than the L1 SL priority value of the reserved resource, and UE may also avoid selection of M consecutive resource(s) after a reserved resource of another UE when the transmitting symbols of the reserved resource overlap with LBT of the selected resource. The selection of the value N is up to UE implementation from {0, 1, 2}. M is determined based on UE implementation (at least including 0). |
| <i>sl-Type1-LBT-BlockingOption2</i> |
| Indicates UE may prioritize/select resource(s) in the slot(s) for transmission, if UE's transmission in slot(s) before a reserved resource is able to share its initiated COT to the reservation. |
| <i>sl-X-Overhead</i> |
| Accounts for overhead from CSI-RS, PT-RS. If the field is absent, the UE applies value <i>n0</i> (see TS 38.214 [19], clause 8.1.3.2). |

| <i>SL-SyncAllowed</i> field descriptions |
|---|
| <i>gnbEnb-Sync</i>
If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to eNB or gNB (i.e., synchronized to a reference UE which is directly synchronized to eNB or gNB). |
| <i>gnss-Sync</i>
If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to GNSS (i.e., synchronized to a reference UE which is directly synchronized to GNSS). |
| <i>ue-Sync</i>
If configured, the (pre-) configured resources can be used if the UE is synchronized to a reference UE which is not synchronized to eNB, gNB and GNSS directly or indirectly. |

| <i>SL-PSCCH-Config</i> field descriptions |
|---|
| <i>sl-FreqResourcePSCCH</i>
Indicates the number of PRBs for PSCCH in a resource pool where it is not greater than the number PRBs of the subchannel. |
| <i>sl-DMRS-ScrambleID</i>
Indicates the initialization value for PSCCH DMRS scrambling. |
| <i>sl-NumReservedBits</i>
Indicates the number of reserved bits in first stage SCI. |
| <i>sl-TimeResourcePSCCH</i>
Indicates the number of symbols of PSCCH in a resource pool. |

| <i>SL-PSSCH-Config</i> field descriptions |
|---|
| <i>sl-BetaOffsets2ndSCI</i>
Indicates candidates of beta-offset values to determine the number of coded modulation symbols for second stage SCI. The value indicates the index of Table 9.3-2 of TS 38.213 [13]. |
| <i>sl-PSSCH-DMRS-TimePatternList</i>
Indicates the set of PSSCH DMRS time domain patterns in terms of PSSCH DMRS symbols in a slot that can be used in the resource pool. |
| <i>sl-Scaling</i>
Indicates a scaling factor to limit the number of resource elements assigned to the second stage SCI on PSSCH. Value <i>f0p5</i> corresponds to 0.5, value <i>f0p65</i> corresponds to 0.65, and so on. |

| <i>SL-PSFCH-Config</i> field descriptions |
|---|
| <i>sl-MinTimeGapPSFCH</i>
The minimum time gap between PSFCH and the associated PSSCH in the unit of slots. |
| <i>sl-NumMuxCS-Pair</i>
Indicates the number of cyclic shift pairs used for a PSFCH transmission that can be multiplexed in a PRB. |
| <i>sl-PSFCH-CandidateResourceType</i>
Indicates the number of PSFCH resources available for multiplexing HARQ-ACK information in a PSFCH transmission (see TS 38.213 [13], clause 16.3). |
| <i>sl-PSFCH-HopID</i>
Scrambling ID for sequence hopping of the PSFCH used in the resource pool. |
| <i>sl-PSFCH-Period</i>
Indicates the period of PSFCH resource in the unit of slots within this resource pool. If set to <i>s/0</i> , no resource for PSFCH, and HARQ feedback for all transmissions in the resource pool is disabled. |
| <i>sl-PSFCH-RB-Set</i>
Indicates the set of PRBs that are actually used for PSFCH transmission and reception. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on. Value 0 in the bitmap indicates that the corresponding PRB is not used for PSFCH transmission and reception while value 1 indicates that the corresponding PRB is used for PSFCH transmission and reception (see TS 38.213 [13]). |

| <i>SL-PRS-ResourceSharedSL-PRS-RP</i> field descriptions |
|---|
| <i>mNumberOfSymbols</i>
Indicates the number of symbols in the SL PRS resource in the shared resource pool. The maximum value that is configured for this field is 4. |
| <i>sl-PRS-CombSizeN-AndReOffset</i>
Indicates a comb offset and a comb size of the SL PRS resource in a shared SL PRS resource pool (see TS 38.214 [19], clause 8.2.4). |
| <i>sl-PRS-ResourceID</i>
Indicates the index of the SL PRS resource in shared resource pool. |

| <i>SL-PTRS-Config</i> field descriptions |
|---|
| <i>sl-PTRS-FreqDensity</i>
Presence and frequency density of SL PT-RS as a function of scheduled BW. If the field is not configured, the UE uses $K_{PT-RS} = 2$ |
| <i>sl-PTRS-TimeDensity</i>
Presence and time density of SL PT-RS as a function of MCS. If the field is not configured, the UE uses $L_{PT-RS} = 1$ |
| <i>sl-PTRS-RE-Offset</i>
Indicates the subcarrier offset for SL PT-RS. If the field is not configured, the UE applies the value <i>offset00</i> (see TS 38.211 [16], clause 8.4.1.2.2). |

| SL-UE-SelectedConfigRP field descriptions | |
|--|---|
| sl-CBR-PriorityTxConfigList | Indicates the mapping between PSSCH transmission parameter (such as MCS, PRB number, retransmission number, CR limit) sets by using the indexes of the configurations in <i>sl-CBR-PSSCH-TxConfigList</i> , CBR ranges by using the indexes to the entry of the CBR range configurations in <i>sl-CBR-RangeConfigList</i> , and priority ranges. It also indicates the default PSSCH transmission parameters to be used when CBR measurement results are not available, and MCS range for the MCS tables used in the resource pool. The field <i>sl-CBR-PriorityTxConfigList-v1650</i> is present only when <i>sl-CBR-PriorityTxConfigList-r16</i> is configured. |
| sl-MaxNumPerReserve | Indicates the maximum number of reserved PSCCH/PSSCH resources that can be indicated by an SCI. |
| sl-MultiReserveResource | Indicates if it is allowed to reserve a sidelink resource for an initial transmission of a TB by an SCI associated with a different TB, based on sensing and resource selection procedure. |
| sl-NRPSFCH-EUTRA-ThresRSRP-List | Indicates a list of 64 thresholds from which a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold. |
| sl-NRPSSCH-EUTRA-ThresRSRP-List | Indicates a list of 64 thresholds, and a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold. If the field is present, the UE shall perform the dynamic co-channel coexistence of LTE sidelink and NR sidelink as specified in TS 38.214; otherwise it shall not perform it. |
| sl-ResourceReservePeriodList | Set of possible resource reservation period allowed in the resource pool in the unit of ms. Up to 16 values can be configured per resource pool. The value <i>ms0</i> is always configured. |
| sl-RS-ForSensing | Indicates whether DMRS of PSCCH or PSSCH is used for L1 RSRP measurement in the sensing operation. |
| sl-SensingWindow | Parameter that indicates the start of the sensing window. |
| sl-SelectionWindowList | Parameter that determines the end of the selection window in the resource selection for a TB with respect to priority indicated in SCI. Value <i>n1</i> corresponds to $1 \cdot 2^\mu$, value <i>n5</i> corresponds to $5 \cdot 2^\mu$, and so on, where $\mu = 0, 1, 2, 3$ refers to SCS 15, 30, 60, 120 kHz respectively. |
| sl-Thres-RSRP-List | Indicates a list of 64 thresholds, and the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted. A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above a threshold. |

| SL-PowerControl field descriptions | |
|---|---|
| <i>sl-MaxTransPower</i> | Indicates the maximum value of the UE's sidelink transmission power on this resource pool when the sidelink transmission is performed only on this resource pool. The unit is dBm. If the sidelink transmission is PSFCH, and multiple resource pools are used, the maximum transmission power for PSFCH is configured as sum of fields <i>sl-maxTransPower</i> over multiple resource pools, as specified in TS 38.101-1 [15]. |
| <i>sl-Alpha-PSSCH-PSCCH</i> | Indicates alpha value for sidelink pathloss based power control for PSCCH/PSSCH when <i>sl-P0-PSSCH-PSCCH</i> is configured. When the field is absent the UE applies the value 1. |
| <i>sl-P0-PSSCH-PSCCH</i> | Indicates P0 value for sidelink pathloss based power control for PSCCH/PSSCH. If not configured, sidelink pathloss based power control is disabled for PSCCH/PSSCH. When <i>sl-P0-PSSCH-PSCCH-r17</i> is configured, the UE ignores <i>sl-P0-PSSCH-PSCCH-r16</i> . |
| <i>dl-Alpha-PSSCH-PSCCH</i> | Indicates alpha value for downlink pathloss based power control for PSCCH/PSSCH when <i>dl-P0-PSSCH-PSCCH</i> is configured. When the field is absent the UE applies the value 1. |
| <i>dl-P0-PSSCH-PSCCH</i> | Indicates P0 value for downlink pathloss based power control for PSCCH/PSSCH. If not configured, downlink pathloss based power control is disabled for PSCCH/PSSCH. When <i>dl-P0-PSSCH-PSCCH-r17</i> is configured, the UE ignores <i>dl-P0-PSSCH-PSCCH-r16</i> .
A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSCCH/PSSCH when <i>dl-P0-PSSCH-PSCCH</i> is configured. |
| <i>dl-Alpha-PSFCH</i> | Indicates alpha value for downlink pathloss based power control for PSFCH when <i>dl-P0-PSFCH</i> is configured. When the field is absent the UE applies the value 1. For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools. |
| <i>dl-P0-PSFCH</i> | Indicates P0 value for downlink pathloss based power control for PSFCH. If not configured, downlink pathloss based power control is disabled for PSFCH. When <i>dl-P0-PSFCH-r17</i> is configured, the UE ignores <i>dl-P0-PSFCH-r16</i> . For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools.
A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSFCH when <i>dl-P0-PSFCH</i> is configured. |
| SL-MinMaxMCS-Config field descriptions | |
| <i>sl-MaxMCS-PSSCH</i> | Indicates the maximum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values. |
| <i>sl-MinMCS-PSSCH</i> | Indicates the minimum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values. |
| SL-CPE-StartingPositionsPSCCH-PSSCH field descriptions | |
| <i>sl-Priority</i> | Indicates L1 priority of PSSCH. |
| <i>sl-CPE-StartingPositions</i> | Indicates a set of candidate CPE starting positions specified in Table 5.3.1-3 [16, TS38.211], |

| Conditional Presence | Explanation |
|----------------------|--|
| A2X | The field is mandatory present in <i>sl-BWP-PoolConfigA2X</i> and <i>sl-BWP-PoolConfigCommonA2X</i> ; otherwise the field is optionally present, Need M. |

– *SL-RLC-BearerConfig*

The IE *SL-RLC-BearerConfig* specifies the SL RLC bearer configuration information for NR sidelink communication.

SL-RLC-BearerConfig information element

```
-- ASN1START
-- TAG-SL-RLC-BEARERCONFIG-START

SL-RLC-BearerConfig-r16 ::=
    SEQUENCE {
        sl-RLC-BearerConfigIndex-r16          SL-RLC-BearerConfigIndex-r16,
        sl-ServedRadioBearer-r16              SLRB-Uu-ConfigIndex-r16          OPTIONAL, -- Cond LCH-SetupOnly
        sl-RLC-Config-r16                      SL-RLC-Config-r16              OPTIONAL, -- Cond LCH-Setup
        sl-MAC-LogicalChannelConfig-r16        SL-LogicalChannelConfig-r16      OPTIONAL, -- Cond LCH-Setup
        ...
        [
            sl-RLC-BearerConfigIndex-v1800      SL-RLC-BearerConfigIndex-v1800  OPTIONAL -- Need R
        ]
    }

-- TAG-SL-RLC-BEARERCONFIG-STOP
-- ASN1STOP
```

| <i>SL-RLC-BearerConfig</i> field descriptions |
|--|
| <i>sl-MAC-LogicalChannelConfig</i>
The field is used to configure MAC SL logical channel parameters. |
| <i>sl-RLC-BearerConfigIndex</i>
The index of the RLC bearer configuration. If the field <i>sl-RLC-BearerConfigIndex-v1800</i> is present, the UE shall ignore the <i>sl-RLC-BearerConfigIndex-r16</i> field. |
| <i>sl-RLC-Config</i>
Determines the RLC mode (UM, AM) and provides corresponding parameters. |
| <i>sl-ServedRadioBearer</i>
Associates the sidelink RLC Bearer with a sidelink DRB. It indicates the index of SL radio bearer configuration, which is corresponding to the RLC bearer configuration. |

| Conditional Presence | Explanation |
|----------------------|--|
| <i>LCH-Setup</i> | The field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, Need M. |
| <i>LCH-SetupOnly</i> | This field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration. Otherwise, it is absent, Need M. |

– *SL-RLC-BearerConfigIndex*

The IE *SL-RLC-BearerConfigIndex* is used to identify a SL RLC bearer configuration.

SL-RLC-BearerConfigIndex information element

```
-- ASN1START
-- TAG-SL-RLC-BEARERCONFIGINDEX-START

SL-RLC-BearerConfigIndex-r16 ::=                INTEGER (1..maxSL-LCID-r16)

SL-RLC-BearerConfigIndex-v1800 ::=              INTEGER (maxSL-LCID-Plus1-r18..maxSL-LCID-r18)

-- TAG-RLC-BEARERCONFIGINDEX-STOP
-- ASN1STOP
```

– *SL-RLC-ChannelConfig*

The IE *SL-RLC-ChannelConfig* specifies the configuration information for PC5 Relay RLC channel between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE or between L2 U2N Relay UEs (in case of multi-hop L2 U2N relay communication).

SL-RLC-ChannelConfig information element

```
-- ASN1START
-- TAG-SL-RLC-RLC-CHANNEL-CONFIG-START

SL-RLC-ChannelConfig-r17 ::=                    SEQUENCE {
  sl-RLC-ChannelID-r17                          SL-RLC-ChannelID-r17,
  sl-RLC-Config-r17                             SL-RLC-Config-r16                OPTIONAL, -- Need M
  sl-MAC-LogicalChannelConfig-r17               SL-LogicalChannelConfig-r16   OPTIONAL, -- Need M
  sl-PacketDelayBudget-r17                      INTEGER (0..1023)           OPTIONAL, -- Need M
  ...}

-- TAG-SL-RLC-CHANNEL-CONFIG-STOP
-- ASN1STOP
```

| <i>SL-RLC-ChannelConfig</i> field descriptions |
|--|
| <i>sl-MAC-LogicalChannelConfig</i>
The field is used to configure MAC SL logical channel parameters. |
| <i>sl-RLC-ChannelID</i>
Indicates the PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE or between L2 U2N Relay UEs (in case of multi-hop L2 U2N relay communication). |
| <i>sl-RLC-Config</i>
Determines the RLC mode (UM, AM) and provides corresponding parameters. |
| <i>sl-PacketDelayBudget</i>
Indicates the Packet Delay Budget for a PC5 Relay RLC channel used in L2 U2N relay operation. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms. |

– *SL-RLC-ChannelID*

The IE *SL-RLC-ChannelID* is used to identify a PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Relay UE and L2 U2U Remote UE.

SL-RLC-ChannelID information element

```
-- ASN1START
-- TAG-SL-RLC-CHANNELID-START

SL-RLC-ChannelID-r17 ::=      INTEGER (1..maxSL-LCID-r16)

-- TAG-SL-RLC-CHANNELID-STOP
-- ASN1STOP
```

– *SL-RLC-Config*

The IE *SL-RLC-Config* is used to specify the RLC configuration of sidelink DRB. RLC AM configuration is only applicable to the unicast NR sidelink communication.

SL-RLC-Config information element

```
-- ASN1START
-- TAG-SL-RLC-CONFIG-START

SL-RLC-Config-r16 ::=
    sl-AM-RLC-r16
    CHOICE {
        sl-SN-FieldLengthAM-r16
        sl-T-PollRetransmit-r16
        sl-PollPDU-r16
        sl-PollByte-r16
        sl-MaxRetxThreshold-r16
        ...
        SN-FieldLengthAM
        T-PollRetransmit,
        PollPDU,
        PollByte,
        ENUMERATED { t1, t2, t3, t4, t6, t8, t16, t32 },
        OPTIONAL, -- Cond SLRBSetup
    }
```

```
    },
    sl-UM-RLC-r16                               SEQUENCE {
        sl-SN-FieldLengthUM-r16                 SN-FieldLengthUM                                OPTIONAL,    -- Cond SLRBSetup
        ...
    },
    ...
}

-- TAG-SL-RLC-CONFIG-STOP
-- ASN1STOP
```

| SL-RLC-Config field descriptions |
|---|
| sl-MaxRetxThreshold
Parameter value of <i>maxRetxThreshold</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>t1</i> corresponds to 1 retransmission, value <i>t2</i> corresponds to 2 retransmissions and so on. |
| sl-PollByte
Parameter value of <i>pollByte</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>kB25</i> corresponds to 25 kBytes, value <i>kB50</i> corresponds to 50 kBytes and so on. <i>infinity</i> corresponds to an infinite amount of kBytes. |
| sl-PollPDU
Parameter value of <i>pollPDU</i> for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value <i>p4</i> corresponds to 4 PDUs, value <i>p8</i> corresponds to 8 PDUs and so on. <i>infinity</i> corresponds to an infinite number of PDUs. |
| sl-SN-FieldLength
This field indicates the RLC SN field size for NR sidelink communication, see TS 38.322 [4]. For groupcast and broadcast, only value <i>size6</i> (6 bits) is configured for the field <i>sl-SN-FieldLengthUM</i> . |
| sl-T-PollRetransmit
Timer value of <i>t-PollRetransmit</i> for RLC AM for NR sidelink communications, see TS 38.322 [4], in milliseconds. Value <i>ms5</i> means 5 ms, value <i>ms10</i> means 10 ms and so on. |

| Conditional Presence | Explanation |
|----------------------|--|
| SLRBSetup | The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M. |

– SL-ScheduledConfig

The IE *SL-ScheduledConfig* specifies sidelink communication/positioning configurations used for network scheduled NR sidelink communication/positioning.

SL-ScheduledConfig information element

```
-- ASN1START
-- TAG-SL-SCHEDULEDCONFIG-START

SL-ScheduledConfig-r16 ::=
    sl-RNTI-r16                               RNTI-Value,
    mac-MainConfigSL-r16                     MAC-MainConfigSL-r16                                OPTIONAL,    -- Need M
```

```

sl-CS-RNTI-r16                RNTI-Value                OPTIONAL, -- Need M
sl-PSFCH-ToPUCCH-r16          SEQUENCE (SIZE (1..8)) OF INTEGER (0..15)  OPTIONAL, -- Need M
sl-ConfiguredGrantConfigList-r16 SL-ConfiguredGrantConfigList-r16  OPTIONAL, -- Need M
...
[[
sl-DCI-ToSL-Trans-r16          SEQUENCE (SIZE (1..8)) OF INTEGER (1..32)  OPTIONAL -- Need M
]],
[[
sl-ConfiguredGrantConfigDedicatedSL-PRS-RP-List-r18 SL-ConfiguredGrantConfigDedicatedSL-PRS-RP-List-r18  OPTIONAL, -- Need M

}

-- TAG-SL-SCHEDULEDCONFIG-STOP
-- ASN1STOP

```

| SL-ScheduledConfig field descriptions |
|---|
| sl-CS-RNTI
Indicate the RNTI used to scramble CRC of DCI format 3_0, see TS 38.321 [3]. |
| sl-DCI-ToSL-Trans
Indicate the time gap between DCI reception and the first sidelink transmission scheduled by the DCI (see TS 38.214 [19], clause 8.1.2.1). Value 1 included in this field corresponds to 1 slot, value 2 corresponds to 2 slots and so on, based on the numerology of sidelink BWP. |
| sl-PRS-CS-RNTI
Indicates the RNTI used to scramble CRC of DCI format 3_2 for configured grants. |
| sl-PRS-RNTI
Indicates the SL-PRS-RNTI used for monitoring the network scheduling to transmit NR sidelink positioning reference signal (i.e. the mode 1) for dynamic grants. |
| sl-PSFCH-ToPUCCH
For dynamic grant and configured grant type 2, this field configures the values (in number of slot lengths) of the PSFCH to PUCCH gap. The field PSFCH-to-HARQ_feedback timing indicator in DCI format 3_0 selects one of the configured values of the PSFCH to PUCCH gap. |
| sl-RNTI
Indicate the SL-RNTI used for monitoring the network scheduling to transmit NR sidelink communication (i.e. the mode 1). |

| MAC-MainConfigSL field descriptions |
|---|
| sl-BSR-Config
This field is to configure the sidelink buffer status report. |
| sl-PrioritizationThres
Indicates the SL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the <i>sl-PrioritizationThres</i> and the <i>ul-PrioritizationThres</i> to the UE separately. |
| ul-PrioritizationThres
Indicates the UL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the <i>sl-PrioritizationThres</i> and the <i>ul-PrioritizationThres</i> to the UE separately. |

– SL-SDAP-Config

The IE *SL-SDAP-Config* is used to set the configurable SDAP parameters for a Sidelink DRB.

SL-SDAP-Config information element

```
-- ASN1START
-- TAG-SL-SDAP-CONFIG-START

SL-SDAP-Config-r16 ::=
    sl-SDAP-Header-r16          SEQUENCE {
    sl-DefaultRB-r16            ENUMERATED {present, absent},
    sl-MappedQoS-Flows-r16      BOOLEAN,
    sl-MappedQoS-Flows-r16      CHOICE {
        sl-MappedQoS-FlowsList-r16 SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-Profile-r16,
        sl-MappedQoS-FlowsListDedicated-r16 SL-MappedQoS-FlowsListDedicated-r16
    }
    sl-CastType-r16             ENUMERATED {broadcast, groupcast, unicast, spare1}
                                OPTIONAL, -- Need M
                                OPTIONAL, -- Need M
```

```

    ...
}

SL-MappedQoS-FlowsListDedicated-r16 ::= SEQUENCE {
    sl-MappedQoS-FlowsToAddList-r16          SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16 OPTIONAL, -- Need N
    sl-MappedQoS-FlowsToReleaseList-r16      SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16 OPTIONAL -- Need N
}

-- TAG-SL-SDAP-CONFIG-STOP
-- ASN1STOP

```

| SL-SDAP-Config field descriptions |
|---|
| sl-DefaultRB
Indicates whether or not this is the default sidelink DRB for this NR sidelink communication transmission destination. Among all configured instances of <i>SL-SDAP-Config</i> for this destination, this field shall be set to <i>true</i> in at most one instance of <i>SL-SDAP-Config</i> and to <i>false</i> in all other instances. |
| sl-MappedQoS-Flows
Indicates QoS flows to be mapped to the sidelink DRB. If the field is included in dedicated signalling, it is set to <i>sl-MappedQoS-FlowsListDedicated</i> ; otherwise, it is set to <i>sl-MappedQoS-FlowsList</i> . |
| sl-MappedQoS-FlowsList
Indicates the list of QoS profiles of the NR sidelink communication transmission destination mapped to this sidelink DRB. |
| sl-MappedQoS-FlowsToAddList
Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be additionally mapped to this sidelink DRB. |
| sl-MappedQoS-FlowsToReleaseList
Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be released from existing QoS flow to SLRB mapping of this sidelink DRB. |
| sl-SDAP-Header
Indicates whether or not a SDAP header is present on this sidelink DRB. The field cannot be changed after a sidelink DRB is established. This field is set to present if the field <i>sl-DefaultRB</i> is set to <i>true</i> . |

– SL-ServingCellInfo

The IE *SL-ServingCellInfo* is used to indicate the L2 U2N Relay UE's PCell/camping cell, which is considered as PCell/camping cell by the L2 U2N Remote UEs connecting with this L2 U2N Relay UE.

SL-ServingCellInfo information element

```

-- ASN1START
-- TAG-SL-SERVINGCELLINFO-START

SL-ServingCellInfo-r17 ::= SEQUENCE {
    sl-PhysCellId-r17          PhysCellId,
    sl-CarrierFreqNR-r17      ARFCN-ValueNR
}

-- TAG-SL-SERVINGCELLINFO-STOP

```

-- ASN1STOP

| SL-ServingCellInfo field descriptions |
|---|
| sl-CarrierFreqNR
Indicates the DL frequency of the cell indicated by <i>sl-PhysCellId</i> . |
| sl-PhysCellId
Indicates the PCI of the PCell. |

– SL-SourceIdentity

The IE *SL-SourceIdentity* is used to identify a source of a NR sidelink communication.

SL-SourceIdentity information element

```
-- ASN1START
-- TAG-SL-SOURCEIDENTITY-START

SL-SourceIdentity-r17 ::=  BIT STRING (SIZE (24))

-- TAG-SL-SOURCEIDENTITY-STOP
-- ASN1STOP
```

– SL-SRAP-Config

The IE *SL-SRAP-Config* is used to set the configurable SRAP parameters used by L2 U2N Relay UE and L2 U2N Remote UE as specified in TS 38.351 [66].

SL-SRAP-Config information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIG-START

SL-SRAP-Config-r17 ::=
    SEQUENCE {
        sl-LocalIdentity-r17          INTEGER (0..255)                                OPTIONAL, -- Need M
        sl-MappingToAddModList-r17    SEQUENCE (SIZE (1..maxLC-ID)) OF SL-MappingToAddMod-r17  OPTIONAL, -- Need N
        sl-MappingToReleaseList-r17   SEQUENCE (SIZE (1..maxLC-ID)) OF SL-RemoteUE-RB-Identity-r17  OPTIONAL, -- Need N
        ...
    }

SL-MappingToAddMod-r17 ::=
    SEQUENCE {
        sl-RemoteUE-RB-Identity-r17    SL-RemoteUE-RB-Identity-r17,
        sl-EgressRLC-ChannelUu-r17     Uu-RelayRLC-ChannelID-r17                                OPTIONAL, -- Cond L2RelayUE
        sl-EgressRLC-ChannelPC5-r17    SL-RLC-ChannelID-r17                                OPTIONAL, -- Need N
        ...
    }
[[
```

```

    sl-EgressRLC-Channel-UL-r19          SL-RLC-ChannelID-r17          OPTIONAL, -- Need N
    sl-EgressRLC-Channel-DL-r19          SL-RLC-ChannelID-r17          OPTIONAL  -- Need N
  ]]
}

SL-RemoteUE-RB-Identity-r17 ::= CHOICE {
  srb-Identity-r17              INTEGER (0..3),
  drb-Identity-r17              DRB-Identity,
  ...
}

-- TAG-SL-SRAP-CONFIG-STOP
-- ASN1STOP

```

| SL-SRAP-Config field descriptions | |
|-----------------------------------|--|
| sl-LocalIdentity | Indicates the local UE ID of the L2 U2N Remote UE (in case of single hop) or local UE ID of the directly or indirectly connected remote UE (in case of multi hop) used in SRAP as specified in TS 38.351 [66]. |
| sl-MappingToAddModList | Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be added or modified. |
| sl-MappingToReleaseList | Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be released. |
| sl-RemoteUE-RB-Identity | Identity of the end-to-end Uu bearer identity of the L2 U2N Remote UE. The value 3 for the field <i>srb-identity-r17</i> (i.e., for configuring SRB3) is not supported in this version of the specification. |
| sl-EgressRLC-Channel-DL | Indicates the egress RLC channel on PC5 Hop for downlink transmissions at the L2 Intermediate U2N Relay UE. |
| sl-EgressRLC-Channel-UL | Indicates the egress RLC channel on PC5 Hop for uplink transmissions at the L2 Intermediate U2N Relay UE. |
| sl-EgressRLC-ChannelUu | Indicates the egress RLC channel on Uu Hop for uplink transmissions at the L2 U2N Relay UE or L2 Last U2N Relay UE. |
| sl-EgressRLC-ChannelPC5 | Indicates the egress RLC channel on PC5 Hop for downlink transmissions at the L2 U2N Relay UE or L2 Last U2N Relay UE and for uplink transmissions at the L2 U2N Remote UE. |

| Conditional Presence | Explanation |
|----------------------|---|
| L2RelayUE | For L2 U2N Relay UE for single hop or for L2 Last U2N Relay UE for multi hop, the field is optionally present, Need M. Otherwise, it is absent. |

– SL-SRAP-ConfigId

The IE *SL-SRAP-ConfigId* is used to identify a SRAP configuration for a indirectly connected L2 U2N Remote UE at the L2 U2N Relay UE.

SL-SRAP-ConfigId information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIGID-START

SL-SRAP-ConfigId-r19 ::=      INTEGER (1.. maxNrofRemoteUE-r17)

-- TAG-SL-SRAP-CONFIGID-STOP
-- ASN1STOP
```

– SL-SRAP-ConfigU2U

The IE *SL-SRAP-ConfigU2U* is used to set the configurable SRAP parameters used by L2 U2U Relay UE and L2 U2U Remote UE as specified in TS 38.351 [66].

SL-SRAP-ConfigU2U information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIGU2U-START

SL-SRAP-ConfigU2U-r18 ::=      SEQUENCE {
    sl-MappingToAddMod-U2U-List-r18      SEQUENCE (SIZE (1..maxSL-LCID-r16)) OF SL-MappingConfig-U2U-r18      OPTIONAL, -- Need N
    sl-MappingToRelease-U2U-List-r18      SEQUENCE (SIZE (1..maxSL-LCID-r16)) OF SLRB-Uu-ConfigIndex-r16      OPTIONAL -- Need N
}

SL-MappingConfig-U2U-r18 ::=      SEQUENCE {
    sl-RemoteUE-SLRB-Identity-r18      SLRB-Uu-ConfigIndex-r16,
    sl-EgressRLC-ChannelPC5-r18      SL-RLC-ChannelID-r17,
    ...
}

-- TAG-SL-SRAP-CONFIGU2U-STOP
-- ASN1STOP
```

| SL-SRAP-ConfigU2U field descriptions |
|--|
| sl-MappingToAddMod-U2U-List
Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel used by L2 U2U Remote UE and L2 U2U Relay UE when acting as Tx UE, as specified in TS 38.351 [66] to be added or modified. |
| sl-MappingToRelease-U2U-List
Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel as specified in TS 38.351 [66] to be released. |
| sl-EgressRLC-ChannelPC5
Indicates the egress PC5 Relay RLC channel for sidelink transmissions at the L2 U2U Relay UE and at the L2 U2U Remote UE. |
| sl-RemoteUE-SLRB-Identity
Identity of the end-to-end sidelink DRB of the L2 U2U Remote UE. |

– *SL-SyncConfig*

The IE *SL-SyncConfig* specifies the configuration information concerning reception of synchronisation signals from neighbouring cells as well as concerning the transmission of synchronisation signals for sidelink communication.

SL-SyncConfig information element

```
-- ASN1START
-- TAG-SL-SYNCCONFIG-START

SL-SyncConfigList-r16 ::= SEQUENCE (SIZE (1..maxSL-SyncConfig-r16)) OF SL-SyncConfig-r16

SL-SyncConfig-r16 ::= SEQUENCE {
    sl-SyncRefMinHyst-r16      ENUMERATED {dB0, dB3, dB6, dB9, dB12}      OPTIONAL, -- Need R
    sl-SyncRefDiffHyst-r16    ENUMERATED {dB0, dB3, dB6, dB9, dB12, dBinf} OPTIONAL, -- Need R
    sl-FilterCoefficient-r16  FilterCoefficient                        OPTIONAL, -- Need R
    sl-SSB-TimeAllocation1-r16 SL-SSB-TimeAllocation-r16              OPTIONAL, -- Need R
    sl-SSB-TimeAllocation2-r16 SL-SSB-TimeAllocation-r16              OPTIONAL, -- Need R
    sl-SSB-TimeAllocation3-r16 SL-SSB-TimeAllocation-r16              OPTIONAL, -- Need R
    sl-SSID-r16               INTEGER (0..671)                          OPTIONAL, -- Need R
    txParameters-r16          SEQUENCE {
        syncTxThreshIC-r16      SL-RSRP-Range-r16                      OPTIONAL, -- Need R
        syncTxThreshOoC-r16    SL-RSRP-Range-r16                      OPTIONAL, -- Need R
        syncInfoReserved-r16    BIT STRING (SIZE (2))                  OPTIONAL, -- Need R
    },
    gnss-Sync-r16              ENUMERATED {true}                        OPTIONAL, -- Need R
    ...
}

SL-RSRP-Range-r16 ::= INTEGER (0..13)

SL-SSB-TimeAllocation-r16 ::= SEQUENCE {
    sl-NumSSB-WithinPeriod-r16 ENUMERATED {n1, n2, n4, n8, n16, n32, n64} OPTIONAL, -- Need R
    sl-TimeOffsetSSB-r16       INTEGER (0..1279)                        OPTIONAL, -- Need R
    sl-TimeInterval-r16        INTEGER (0..639)                         OPTIONAL, -- Need R
}

-- TAG-SL-SYNCCONFIG-STOP
-- ASN1STOP
```

| <i>SL-SyncConfig</i> field descriptions |
|---|
| <i>gnss-Sync</i>
If configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to GNSS. If not configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to eNB/gNB. |
| <i>sl-SyncRefMinHyst</i>
Hysteresis when evaluating a SyncRef UE using absolute comparison. |
| <i>sl-SyncRefDiffHyst</i>
Hysteresis when evaluating a SyncRef UE using relative comparison. |
| <i>sl-NumSSB-WithinPeriod</i>
Indicates the number of sidelink SSB transmissions within one sidelink SSB period. The applicable values are related to the subcarrier spacing and frequency as follows:
FR1, SCS = 15 kHz: 1
FR1, SCS = 30 kHz: 1, 2
FR1, SCS = 60 kHz: 1, 2, 4
FR2, SCS = 60 kHz: 1, 2, 4, 8, 16, 32
FR2, SCS = 120 kHz: 1, 2, 4, 8, 16, 32, 64
All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-NumSSB-WithinPeriod</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. |
| <i>sl-TimeOffsetSSB</i>
Indicates the slot offset from the start of sidelink SSB period to the first sidelink SSB. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeOffsetSSB</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. |
| <i>sl-TimeInterval</i>
Indicates the slot interval between neighboring sidelink SSBs. This value is applicable when there are more than one sidelink SSBs within one sidelink SSB period. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation1</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation2</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in <i>sl-TimeInterval</i> in <i>sl-SSB-TimeAllocation3</i> is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. |
| <i>sl-SSID</i>
Indicates the ID of sidelink synchronization signal associated with different synchronization priorities. |
| <i>syncInfoReserved</i>
Reserved for future use. |
| <i>syncTxThreshIC</i>, <i>syncTxThreshOC</i>
Indicates the thresholds used while in coverage and out of coverage, respectively. Value 0 corresponds to -infinity, value 1 to -115 dBm, value 2 to -110 dBm, and so on (i.e. in steps of 5 dBm) until value 12, which corresponds to -60 dBm, while value 13 corresponds to +infinity. |

– *SL-Thres-RSRP-List*

IE *SL-Thres-RSRP-List* indicates a threshold used for sensing based UE autonomous resource selection (see TS 38.215 [9]). A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above the threshold defined by IE *SL-Thres-RSRP-List*. A NR sidelink resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSFCH-EUTRA-ThresRSRP-List*. A NR sidelink resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSSCH-EUTRA-ThresRSRP-List*. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to $(-128 + (n-1)*2)$ dBm and so on, value 66 corresponds to infinity dBm.

***SL-Thres-RSRP-List* information element**

```
-- ASN1START
-- TAG-SL-THRES-RSRP-LIST-START

SL-Thres-RSRP-List-r16 ::= SEQUENCE (SIZE (64)) OF SL-Thres-RSRP-r16

SL-Thres-RSRP-r16 ::= INTEGER (0..66)

-- TAG-SL-THRES-RSRP-LIST-STOP
-- ASN1STOP
```

– *SL-TxPower*

The IE *SL-TxPower* is used to limit the UE's sidelink transmission power on a carrier frequency. The unit is dBm. Value minusinfinity corresponds to –infinity.

***SL-TxPower* information element**

```
-- ASN1START
-- TAG-SL-TXPOWER-START

SL-TxPower-r16 ::= CHOICE {
    minusinfinity-r16 NULL,
    txPower-r16 INTEGER (-30..33)
}

-- TAG-SL-TXPOWER-STOP
-- ASN1STOP
```

– *SL-TypeTxSync*

The IE *SL-TypeTxSync* indicates the synchronization reference type.

***SL-TypeTxSync* information element**

```
-- ASN1START
-- TAG-SL-TYPETXSYNC-START

SL-TypeTxSync-r16 ::=                ENUMERATED {gnss, gnbEnb, ue}

-- TAG-SL-TYPETXSYNC-STOP
-- ASN1STOP
```

SL-UE-SelectedConfig

IE *SL-UE-SelectedConfig* specifies sidelink communication/positioning configurations used for UE autonomous resource selection.

***SL-UE-SelectedConfig* information element**

```
-- ASN1START
-- TAG-SL-UE-SELECTEDCONFIG-START

SL-UE-SelectedConfig-r16 ::=
    SEQUENCE {
        sl-PSSCH-TxConfigList-r16          SL-PSSCH-TxConfigList-r16          OPTIONAL,    -- Cond SIB12
        sl-ProbResourceKeep-r16             ENUMERATED {v0, v0dot2, v0dot4, v0dot6, v0dot8} OPTIONAL,    -- Need R
        sl-ReselectAfter-r16                ENUMERATED {n1, n2, n3, n4, n5, n6, n7, n8, n9} OPTIONAL,    -- Need R
        sl-CBR-CommonTxConfigList-r16       SL-CBR-CommonTxConfigList-r16       OPTIONAL,    -- Need R

```

| SL-UE-SelectedConfig field descriptions |
|---|
| sl-PrioritizationThres
Indicates the SL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the <i>sl-PrioritizationThres</i> and the <i>ul-PrioritizationThres</i> to the UE separately. |
| sl-ProbResourceKeep
Indicates the probability with which the UE keeps the current resource when the resource reselection counter reaches zero for sensing based UE autonomous resource selection (see TS 38.321 [3]). |
| sl-PSSCH-TxConfigList
Indicates PSSCH TX parameters such as MCS, sub-channel number, retransmission number, associated to different UE absolute speeds and different synchronization reference types for UE autonomous resource selection. |
| sl-ReselectAfter
Indicates the number of consecutive skipped transmissions before triggering resource reselection for sidelink communication (see TS 38.321 [3]). |
| ul-PrioritizationThres
Indicates the UL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the <i>sl-PrioritizationThres</i> and the <i>ul-PrioritizationThres</i> to the UE separately. |

| Conditional Presence | Explanation |
|----------------------|--|
| SIB12 | This field is optional present if included within SIB12, need R. Otherwise, the field is absent. |
| notSIB12 | The field is absent in SIB12. Otherwise, it is optional present, Need R |

– SL-ZoneConfig

The IE *SL-ZoneConfig* is used to configure the zone ID related parameters.

SL-ZoneConfig information element

```
-- ASN1START
-- TAG-SL-ZONECONFIG-START

SL-ZoneConfig-r16 ::=
    sl-ZoneLength-r16
    ...
}

-- TAG-SL-ZONECONFIG-STOP
-- ASN1STOP
```

SEQUENCE {
ENUMERATED { m5, m10, m20, m30, m40, m50, spare2, spare1},

| SL-ZoneConfig field descriptions |
|---|
| sl-ZoneLength
Indicates the length of each geographic zone. |

– *SLRB-Uu-ConfigIndex*

The IE *SLRB-Uu-ConfigIndex* is used to identify a sidelink DRB configuration from the network side, or to indicate an end-to-end sidelink DRB by L2 U2U Relay UE in *SidelinkUEInformation* message.

***SLRB-Uu-ConfigIndex* information element**

```
-- ASN1START
-- TAG-SLRB-UU-CONFIGINDEX-START

SLRB-Uu-ConfigIndex-r16 ::=                INTEGER (1..maxNrofSLRB-r16)

-- TAG-SLRB-UU-CONFIGINDEX-STOP
-- ASN1STOP
```

6.3.6 MBS information elements

– *CarrierFreqListMBS*

The IE *CarrierFreqListMBS* is used to inform network of the frequencies on which the UE is receiving or interested to receive MBS broadcast service via a broadcast MRB.

***CarrierFreqListMBS* information element**

```
-- ASN1START
-- TAG-CARRIERFREQLISTMBS-START

CarrierFreqListMBS-r17 ::=                SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF ARFCN-ValueNR

-- TAG-CARRIERFREQLISTMBS-STOP
-- ASN1STOP
```

– *CFR-ConfigMCCH-MTCH*

The IE *CFR-ConfigMCCH-MTCH* is used to configure the common frequency resource used for MCCH, multicast MCCH and MTCH reception.

***CFR-ConfigMCCH-MTCH* information element**

```
-- ASN1START
-- TAG-CFR-CONFIGMCCH-MTCH-START

CFR-ConfigMCCH-MTCH-r17 ::= SEQUENCE {
    locationAndBandwidthBroadcast-r17      LocationAndBandwidthBroadcast-r17  OPTIONAL, -- Need S
    pdsch-ConfigMCCH-r17                   PDSCH-ConfigBroadcast-r17      OPTIONAL, -- Need S

}
```

```
}
LocationAndBandwidthBroadcast-r17 ::= CHOICE {
    sameAsSib1ConfiguredLocationAndBW      NULL,
    locationAndBandwidth                    INTEGER (0..37949)
}

-- TAG-CFR-CONFIGMCCH-MTCH-STOP
-- ASN1STOP
```

| CFR-ConfigMCCH-MTCH field descriptions |
|--|
| commonControlResourceSetExt
An additional common control resource set which may be configured and used for <i>searchSpaceMCCH/searchSpaceMTCH</i> or UE-specific search space in the BWP where <i>searchSpaceMCCH</i> is configured. It is contained in the bandwidth of the CFR for broadcast and larger than CORESET#0. |
| locationAndBandwidthBroadcast
Indicates starting PRB and the number of PRBs of CFR used for MCCH, multicast MCCH and MTCH reception.
Value <i>sameAsSib1ConfiguredLocationAndBW</i> means the CFR for broadcast or multicast has the same location and size as the <i>locationAndBandwidth</i> for initial BWP (for (e)RedCap UEs: <i>initialDownlinkBWP-RedCap</i> if it is configured and includes CD-SSB and the entire CORESET#0) configured in <i>SIB1</i> .
Value <i>locationAndBandwidth</i> is used to configure CFR with bandwidth that is larger than and fully contains the bandwidth for the initial DL BWP (for (e)RedCap UEs: <i>initialDownlinkBWP-RedCap</i> if it is configured and includes CD-SSB and the entire CORESET#0) configured in <i>SIB1</i> and CORESET#0. The value of the field shall be interpreted as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13].
This field is not included in <i>cfrr-ConfigMCCH-MTCH-RedCap</i> if <i>initialDownlinkBWP-RedCap</i> in <i>SIB1</i> is configured but does not include CD-SSB and the entire CORESET#0. If the field is absent, the CFR for broadcast or multicast has the same location and size as CORESET#0. |
| pdsch-ConfigMCCH
Indicates PDSCH parameters used for MCCH or multicast MCCH transmission. If the field is absent, PDSCH parameters used for MCCH or multicast MCCH are the same as those of PDSCH configuration provided in <i>initialDownlinkBWP</i> in <i>SIB1</i> . |

| Conditional Presence | Explanation |
|------------------------------|--|
| NotSIB1CommonControlResource | The field is optional present in case <i>commonControlResourceSet</i> is not configured in SIB1, Need R, otherwise it is absent. |

– DRX-ConfigPTM

The IE *DRX-ConfigPTM* is used to configure DRX related parameters for PTM transmission as specified in TS 38.321 [3].

DRX-ConfigPTM information element

```
-- ASN1START
-- TAG-DRX-CONFIGPTM-START

DRX-ConfigPTM-r17 ::= SEQUENCE {

}
-- TAG-DRX-CONFIGPTM-STOP
-- ASN1STOP

```

| DRX-ConfigPTM field descriptions |
|---|
| drx-HARQ-RTT-TimerDL-PTM
Value in number of symbols of the CFR where the transport block was received. |
| drx-InactivityTimerPTM
Value in multiple integers of 1 ms. <i>ms0</i> corresponds to 0, <i>ms1</i> corresponds to 1 ms, <i>ms2</i> corresponds to 2 ms, and so on. |
| drx-LongCycleStartOffsetPTM
<i>drx-LongCycle-PTM</i> in ms and <i>drx-StartOffset-PTM</i> in multiples of 1 ms. |
| drx-onDurationTimerPTM
Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value <i>ms1</i> corresponds to 1 ms, value <i>ms2</i> corresponds to 2 ms, and so on. |
| drx-RetransmissionTimerDL-PTM
Value in number of slot lengths of the CFR where the transport block was received. value <i>s/0</i> corresponds to 0 slots, <i>s/1</i> corresponds to 1 slot, <i>s/2</i> corresponds to 2 slots, and so on. |
| drx-SlotOffsetPTM
Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on. |

| Conditional Presence | Explanation |
|----------------------|--|
| <i>HARQFeedback</i> | The field is mandatory present if HARQ feedback is enabled for a G-RNTI/G-CS-RNTI associated with this DRX configuration. It is optionally present. Need R, otherwise. |

– *MBS-NeighbourCellList*

The IE *MBS-NeighbourCellList* indicates a list of neighbour cells where ongoing MBS sessions provided via broadcast/multicast MRB in the current cell may also be provided, as indicated in the *mtch-NeighbourCell*.

MBS-NeighbourCellList information element

```
-- ASN1START
-- TAG-MBS-NEIGHBOURCELLLIST-START

MBS-NeighbourCellList-r17 ::=      SEQUENCE (SIZE (0..maxNeighCellMBS-r17)) OF MBS-NeighbourCell-r17

MBS-NeighbourCell-r17 ::=          SEQUENCE {
    physCellId-r17                PhysCellId,
    carrierFreq-r17                ARFCN-ValueNR                                OPTIONAL  -- Need S
}

-- TAG-MBS-NEIGHBOURCELLLIST-STOP
-- ASN1STOP
```

| MBS-NeighbourCellList field descriptions |
|--|
| carrierFreq
Indicates the frequency of the neighbour cell indicated by <i>physCellId</i> . Absence of the IE means that the neighbour cell is on the same frequency as the current cell. |

– MBS-NonServingInfoList

The IE *MBS-NonServingInfoList* is used to inform network of the frequencies, CFR information and subcarrier spacing for MBS broadcast reception on the non-serving cell.

MBS-NonServingInfoList information element

```
-- ASN1START
-- TAG-MBS-NONSERVINGINFOLIST-START

MBS-NonServingInfoList-r18 ::= SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF NonServingInfo-r18

NonServingInfo-r18 ::= SEQUENCE {
    freqInfoMBS-r18          FreqInfoMBS-r18          OPTIONAL,
    cfr-InfoMBS-r18          CHOICE {
        cfr-Bandwidth-r18    INTEGER (1..maxNrofPhysicalResourceBlocks),
        cfr-LocationAndBW-r18 CFR-LocationAndBW-r18
    },
    subcarrierSpacing-r18    SubcarrierSpacing          OPTIONAL
}

FreqInfoMBS-r18 ::= SEQUENCE {
    carrierFreqMBS-r18       ARFCN-ValueNR,
    freqBandIndicatorMBS-r18 FreqBandIndicatorNR
}

CFR-LocationAndBW-r18 ::= SEQUENCE {
    locationAndBandwidthMBS-r18 INTEGER (0..37949)          OPTIONAL,
    absoluteFrequencyPointA-MBS-r18 ARFCN-ValueNR          OPTIONAL,
    offsetToCarrierMBS-r18          INTEGER (0..2199)          OPTIONAL
}

-- TAG-MBS-NONSERVINGINFOLIST-STOP
-- ASN1STOP
```

| MBS-NonServingInfoList field descriptions |
|--|
| freqInfoMBS
Indicates MBS frequency of interest and the frequency band of the non-serving cell for MBS broadcast reception as specified in clause 5.9.4.3. |
| cfr-infoMBS
Indicates the CFR information of the non-serving cell for MBS broadcast reception. It is up to UE implementation to choose <i>cfr-Bandwidth</i> or <i>cfr-LocationAndBW</i> as the reported CFR information. |
| cfr-Bandwidth
Indicates the CFR bandwidth of the non-serving cell for MBS broadcast reception. |
| cfr-LocationAndBW
Indicates the CFR location and bandwidth of the non-serving cell for MBS broadcast reception. |
| subcarrierSpacing
Indicates the subcarrier spacing of the CORESET#0 of the non-serving cell for MBS broadcast reception. |

| CFR-LocationAndBW field descriptions |
|--|
| locationAndBandwidthMBS
Indicates the starting PRB and the number of PRBs of CFR used for MBS broadcast reception from non-serving cell. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13]. The first PRB is a PRB determined by <i>subcarrierSpacing</i> , <i>offsetToCarrierMBS</i> and <i>absoluteFrequencyPointA-MBS</i> of the non-serving cell. |
| absoluteFrequencyPointA-MBS
Indicates the absolute frequency position of the reference resource block (common RB 0) of the non-serving cell for MBS broadcast reception. Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2). |
| offsetToCarrierMBS
Indicates the offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the <i>subcarrierSpacing</i> indicated for the non-serving cell). |

– MBS-ServiceList

The IE *MBS-ServiceList* is used to inform the network of the MBS services that the UE is receiving or interested to receive.

MBS-ServiceList information element

```
-- ASN1START
-- TAG-MBS-SERVICELIST-START

MBS-ServiceList-r17 ::= SEQUENCE (SIZE (1..maxNrofMBS-ServiceListPerUE-r17)) OF MBS-ServiceInfo-r17

MBS-ServiceInfo-r17 ::= SEQUENCE {
    tmgi-r17 TMGI-r17
}

-- TAG-MBS-SERVICELIST-STOP
-- ASN1STOP
```

– MBS-SessionInfoList

The IE *MBS-SessionInfoList* provides the list of ongoing MBS broadcast sessions transmitted via broadcast MRB and, for each MBS broadcast session, the associated G-RNTI and scheduling information.

MBS-SessionInfoList information element

```
-- ASN1START
-- TAG-MBS-SESSIONINFOLIST-START

MBS-SessionInfoList-r17 ::= SEQUENCE (SIZE (1..maxNrofMBS-Session-r17)) OF MBS-SessionInfo-r17

}

-- TAG-MBS-SESSIONINFOLIST-STOP
-- ASN1STOP
```

| MBS-SessionInfoList field descriptions |
|--|
| g-RNTI
G-RNTI used to scramble the scheduling and transmission of MTCH. |
| headerCompression
If <i>rohc</i> is configured, the UE shall apply the configured ROHC profile(s) in downlink. |
| mbs-SessionAreaList
Indicates the list of intended service areas associated with an MBS broadcast session in an NTN cell. If this field is absent, the MBS broadcast session can be received within the MBS Service Area. |
| mbs-SessionId
Indicates an identifier of the MBS session provided by the MTCH. |
| mrbs-listBroadcast
A list of broadcast MRBs to which the associated broadcast MBS session is mapped to. |
| mtch-neighbourCell
Indicates neighbour cells which provide this service on MTCH. The first bit is set to 1 if the service is provided on MTCH in the first cell in <i>mbs-NeighbourCellList</i> , otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in <i>mbs-NeighbourCellList</i> , and so on. If the service is not available in any neighbouring cell and <i>mbs-NeighbourCellList</i> is signalled, the network sets all bits in this field to 0. The field is absent when <i>mbs-NeighbourCellList</i> is absent or an empty <i>mbs-NeighbourCellList</i> is signalled. If this field is absent when <i>mbs-NeighbourCellList</i> is absent or a non-empty <i>mbs-NeighbourCellList</i> is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty <i>mbs-NeighbourCellList</i> is signalled, then the UE shall assume that MBS broadcast services signalled in <i>mbs-SessionInfoList</i> in the <i>MBSBroadcastConfiguration</i> message are not provided in any neighbour cell. |
| mtch-schedulingInfo
Indicates the index of DRX configuration entry in <i>drx-ConfigPTM-List</i> that is used for scheduling the MTCH. The value 0 corresponds to the first entry in <i>drx-ConfigPTM-List</i> , the value 1 corresponds to the second entry in <i>drx-ConfigPTM-List</i> and so on. In case <i>mtch-schedulingInfo</i> is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH [see TS 38.213 [13], clause 10.1]. |
| mtch-SSB-MappingWindowIndex
Indicates the index of <i>MTCH-SSB-MappingWindowCycleOffset</i> configuration entry in <i>MTCH-SSB-MappingWindowList</i> . The value 0 corresponds to the first entry in <i>MTCH-SSB-MappingWindowList</i> , the value 1 corresponds to the second entry in <i>MTCH-SSB-MappingWindowList</i> and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI. |
| pdcp-SN-SizeDL
Indicates that PDCP sequence number size of 12 bits is used, as specified in TS 38.323 [5]. When the field is absent the UE applies the value as specified in 9.1.1.7. |
| pdschConfigIndex
Indicates the index of PDSCH configuration entry in <i>pdschConfigList</i> for MTCH. Value 0 corresponds to the first entry in <i>pdschConfigList</i> , the value 1 corresponds to the second entry in <i>pdschConfigList</i> and so on. When the field is absent the UE applies the first entry in <i>pdschConfigList</i> for MTCH. |
| sn-FieldLength
Indicates that the RLC SN field size of 6 bits is used, see TS 38.322 [4]. When the field is absent the UE applies the value as specified in 9.1.1.7. |
| t-Reassembly
Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on. When the field is absent the UE applies the value in specified in 9.1.1.7. |
| t-Reordering
Value in ms of t-Reordering specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on. When the field is absent the UE applies the value as specified in 9.1.1.7. |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>MTCH-Mapping</i> | The field is mandatory present if the number of actual transmitted SSBs determined according to <i>ssb-PositionsInBurst</i> in SIB1 is more than 1, and <i>searchspaceMTCH</i> is not set to zero (including the case where <i>searchSpaceMTCH</i> is absent and <i>searchSpaceMCCH</i> is not set to zero). Otherwise, it is absent, Need R. |

– *MBS-SessionInfoListMulticast*

The IE *MBS-SessionInfoListMulticast* provides a list of MBS multicast sessions transmitted via multicast MRB for RRC_INACTIVE UEs and, for each MBS multicast session, the associated G-RNTI and scheduling information.

MBS-SessionInfoListMulticast information element

```
-- ASN1START
-- TAG-MBS-SESSIONINFOLISTMULTICAST-START

MBS-SessionInfoListMulticast-r18 ::= SEQUENCE (SIZE (1..maxNrofMBS-Session-r17)) OF MBS-SessionInfoMulticast-r18

MBS-SessionInfoMulticast-r18 ::= SEQUENCE {
    mbs-SessionId-r18          TMGI-r17,
    g-RNTI-r18                 RNTI-Value                               OPTIONAL, -- Need R
    mrb-ListMulticast-r18      MRB-ListMulticast-r18                 OPTIONAL, -- Need R

-- TAG-MBS-SESSIONINFOLISTMULTICAST-STOP
-- ASN1STOP
```

| MBS-SessionInfoListMulticast field descriptions |
|--|
| g-RNTI
G-RNTI used to scramble the scheduling and transmission of multicast MTCH. |
| mbs-SessionId
Indicates an identifier of the MBS session to be received by the UE in RRC_INACTIVE. |
| mrbs-ListMulticast
A list of multicast MRBs to which the associated MBS multicast session is mapped to. |
| mtch-NeighbourCell
Indicates neighbour cells which provide this service on MTCH for RRC_INACTIVE. The first bit is set to 1 if the service is provided on MTCH in the first cell in <i>mbs-NeighbourCellList</i> , otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in <i>mbs-NeighbourCellList</i> , and so on. If the service is not available in any neighbouring cell and <i>mbs-NeighbourCellList</i> is signalled, the network sets all bits in this field to 0. The field is absent when <i>mbs-NeighbourCellList</i> is absent or an empty <i>mbs-NeighbourCellList</i> is signalled. If this field is absent when <i>mbs-NeighbourCellList</i> is absent or a non-empty <i>mbs-NeighbourCellList</i> is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty <i>mbs-NeighbourCellList</i> is signalled, then the UE shall assume that MBS multicast services signalled in <i>mbs-SessionInfoListMulticast</i> in the <i>MBSMulticastConfiguration</i> message are not provided in any neighbour cell. |
| mtch-SchedulingInfo
Indicates the index of DRX configuration entry in <i>drx-ConfigPTM-List</i> that is used for scheduling the MTCH. The value 0 corresponds to the first entry in <i>drx-ConfigPTM-List</i> , the value 1 corresponds to the second entry in <i>drx-ConfigPTM-List</i> and so on. In case <i>mtch-schedulingInfo</i> is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH. |
| mtch-SSB-MappingWindowIndex
Indicates the index of <i>MTCH-SSB-MappingWindowCycleOffset</i> configuration entry in <i>MTCH-SSB-MappingWindowList</i> . The value 0 corresponds to the first entry in <i>MTCH-SSB-MappingWindowList</i> , the value 1 corresponds to the second entry in <i>MTCH-SSB-MappingWindowList</i> and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI. |
| pdcp-SN-SizeDL
Indicates PDCP sequence number size of 12 or 18 bits, as specified in TS 38.323 [5]. |
| pdsch-ConfigIndex
Indicates the index of PDSCH configuration entry in <i>pdsch-ConfigList</i> for MTCH. Value 0 corresponds to the first entry in <i>pdsch-ConfigList</i> , the value 1 corresponds to the second entry in <i>pdsch-ConfigList</i> and so on. When the field is absent the UE applies the first entry in <i>pdsch-ConfigList</i> for MTCH. |
| pdcp-SyncIndicator
Indicates the PDCP COUNT of the corresponding multicast session is synchronized in the RNA, i.e. the cells in the RNA follow a common QoS flow to MRB mapping rule and at the same time PDCP COUNT is set according to the MBS QoS Flow SN. |
| sn-FieldLength
Indicates RLC SN field size of 6 or 12 bits, as specified in TS 38.322 [4]. |
| stopMonitoringRNTI
Indicates the UE to stop monitoring the G-RNTI for the corresponding multicast session. |
| t-Reassembly
Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on. |
| t-Reordering
Value in ms of <i>t-Reordering</i> specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on. |
| thresholdIndex
Indicates the index of <i>thresholdMBS</i> entry in <i>thresholdMBS-List</i> that is used for RRC connection resume for a UE receiving the corresponding multicast session in RRC_INACTIVE. Value 0 corresponds to the first entry in <i>thresholdMBS-List</i> , the value 1 corresponds to the second entry in <i>thresholdMBS-List</i> and so on. |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>G-RNTI</i> | The field is optionally present, Need R, if <i>g-RNTI</i> is included. Otherwise, it is absent. |
| <i>MTCH-Mapping</i> | The field is mandatory present if the number of actual transmitted SSBs determined according to <i>ssb-PositionsInBurst</i> in <i>SIB1</i> is more than 1, and <i>searchSpaceMulticastMTCH</i> is not set to zero (including the case where <i>searchSpaceMulticastMTCH</i> is absent and <i>searchSpaceMulticastMCCH</i> is not set to zero). Otherwise, it is absent, Need R. |
| <i>RRCRelease</i> | The field is optionally present, Need R, if <i>mbs-SessionInfoListMulticast</i> is included in <i>RRCRelease</i> message. Otherwise, it is absent. |

– *MTCH-SSB-MappingWindowList*

The IE *MTCH-SSB-MappingWindowList* is used to configure MTCH PDCCH occasions to SSB mapping window related periodic and offset parameters.

***MTCH-SSB-MappingWindowList* information element**

```
-- ASN1START
-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-START

MTCH-SSB-MappingWindowList-r17 ::= SEQUENCE (SIZE (1..maxNrofMTCH-SSB-MappingWindow-r17)) OF MTCH-SSB-MappingWindowCycleOffset-r17

MTCH-SSB-MappingWindowCycleOffset-r17 ::= CHOICE {
    ms10          INTEGER(0..9),
    ms20          INTEGER(0..19),
    ms32          INTEGER(0..31),
    ms64          INTEGER(0..63),
    ms128         INTEGER(0..127),
    ms256         INTEGER(0..255)
}

-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-STOP
-- ASN1STOP
```

| <i>MTCH-SSB-MappingWindowList</i> field descriptions |
|---|
| <p><i>MTCH-SSB-MappingWindowCycleOffset</i></p> <p>Indicates the <i>cycle</i> and <i>offset</i> for MTCH PDCCH occasions to SSB mapping. Values in unit of ms. <i>ms10</i> corresponds to cycle of 10 ms with corresponding offset between 0 and 9 ms, value <i>ms20</i> corresponds to cycle of 20 ms with corresponding offset between 0 and 19 ms, and so on. The mapping window starts at a subframe in a SFN where $[(\text{SFN number} \times 10) + \text{subframe number}] \bmod (\text{cycle}) = \text{offset}$.</p> <p>PDCCH monitoring occasions for MTCH in a mapping window which are not overlapping with UL symbols (determined according to <i>tdd-UL-DL-ConfigurationCommon</i>) are sequentially numbered starting from 1 in the maping window. The $[x \times N + K]^{\text{th}}$ PDCCH monitoring occasion for MTCH in this mapping window corresponds to the K^{th} transmitted SSB, where $x = 0, 1, \dots, X-1$, $K = 1, 2, \dots, N$, N is the number of actual transmitted SSBs determined according to <i>ssb-PositionsInBurst</i> in <i>SIB1</i> and X is equal to $\text{CEIL}(\text{number of PDCCH monitoring occasions in MTCH to SSB mapping transmission window}/N)$. The actual transmitted SSBs are sequentially numbered from one in ascending order of their SSB indexes.</p> |

– *PDSCH-ConfigBroadcast*

The IE *PDSCH-ConfigBroadcast* is used to configure parameters for acquiring the PDSCH for MCCH, multicast MCCH and MTCH.

PDSCH-ConfigBroadcast information element

```
-- ASN1START
-- TAG-PDSCH-CONFIGBROADCAST-START

PDSCH-ConfigBroadcast-r17 ::= SEQUENCE {
    pdschConfigList-r17          SEQUENCE (SIZE (1..maxNrofPDSCH-ConfigPTM-r17) ) OF PDSCH-ConfigPTM-r17,
    pdsch-TimeDomainAllocationList-r17 PDSCH-TimeDomainResourceAllocationList-r16 OPTIONAL, -- Need R
    rateMatchPatternToAddModList-r17 SEQUENCE (SIZE (1..maxNrofRateMatchPatterns)) OF RateMatchPattern OPTIONAL, -- Need R

PDSCH-ConfigPTM-r17 ::= SEQUENCE {
    dataScramblingIdentityPDSCH-r17 INTEGER (0..1023) OPTIONAL, -- Need S
    dmrs-ScramblingID0-r17          INTEGER (0..65535) OPTIONAL, -- Need S
    pdsch-AggregationFactor-r17     ENUMERATED {n2, n4, n8} OPTIONAL -- Need S
}

-- TAG-PDSCH-CONFIGBROADCAST-STOP
-- ASN1STOP
```

| <i>PDSCH-ConfigBroadcast</i> field descriptions |
|---|
| <i>lte-CRS-ToMatchAround</i>
Parameters to determine an LTE CRS pattern that the UE shall rate match around. |
| <i>pdschConfigList</i>
List of PDSCH parameters which can be configured per G-RNTI. Only one entry is allowed to be configured if included in <i>SIB20</i> or <i>SIB24</i> . |
| <i>pdsch-TimeDomainAllocationList</i>
List of time-domain configurations for timing of DL assignment to DL data.
The field <i>pdsch-TimeDomainAllocationList</i> applies to DCI format 4_0 (see table 5.1.2.1.1-1 in TS 38.214 [19]). When the field is absent, the UE follows PDSCH time domain resource allocation determination rule as specified in TS 38.214 [19], clause 5.1.2.1.1. |
| <i>rateMatchPatternToAddModList</i>
Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns (see TS 38.214 [19], clause 5.1.4.1). |
| <i>mcs-Table</i>
Indicates which MCS table the UE shall use for PDSCH. If the field is absent the UE applies the value 64QAM. The field <i>mcs-Table</i> applies to DCI format 4_0 with CRC scrambled by MCCH-RNTI/G-RNTI for MBS broadcast or by Multicast MCCH-RNTI for MBS multicast in RRC_INACTIVE, and applies to DCI format 4_1 with CRC scrambled by G-RNTI for MBS multicast in RRC_INACTIVE (see TS 38.214 [19], clause 5.1.3.1). |
| <i>xOverhead</i>
Accounts for an overhead from CSI-RS, CORESET, etc. If the field is absent, the UE applies value xOh0 (see TS 38.214 [19], clause 5.1.3.2). |

| <i>PDSCH-ConfigPTM</i> field descriptions |
|---|
| <i>dataScramblingIdentityPDSCH</i>
Identifier(s) used to initialize data scrambling (c_init) for PDSCH as specified in TS 38.211 [16], clause 7.3.1.1. When the field is absent the UE applies the value physCellId configured for this serving cell. |
| <i>dmrs-ScramblingID0</i>
DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value <i>physCellId</i> configured for this serving cell. |
| <i>pdsch-AggregationFactor</i>
Number of repetitions for dynamic scheduling of MBS broadcast data for MTCH PDSCH (see TS 38.214 [19], clause 5.1.2.1). When the field is absent the UE applies the value 1. |

— *TMGI*

The IE *TMGI* is used to identify the MBS session.

TMGI information element

```
-- ASN1START
-- TAG-TMGI-START

TMGI-r17 ::=
    plmn-Id-r17
    plmn-Index
    explicitValue
    },
    SEQUENCE {
        CHOICE {
            INTEGER (1..maxPLMN),
            PLMN-Identity
        }
    }
```

```

    serviceId-r17                OCTET STRING (SIZE (3))
}

-- TAG-TMGI-STOP
-- ASN1STOP

```

TMGI field descriptions

plmn-Index

PLMN index or NPN index according to the *plmn-IdentityInfoList* and *npn-IdentityInfoList* fields included in *SIB1*. If this field is included in the *MRB-ToAddMod-r17*, the UE translates the *plmn-Index* into the PLMN Identity or SNPN Identity based on the configuration in *SIB1* (which is the *SIB1* of the target cell in case of handover). The *explicitValue* is not used for MBS service(s) of an SNPN.

serviceld

Uniquely identifies the identity of an MBS service within a PLMN. The field contains octet 3- 5 of the IE Temporary Mobile Group Identity (TMGI) as defined in TS 24.008 [38]. The first octet contains the third octet of the TMGI, the second octet contains the fourth octet of the TMGI and so on.

6.4 RRC multiplicity and type constraint values

– Multiplicity and type constraint definitions

```

-- ASN1START
-- TAG-MULTIPLICITY-AND-TYPE-CONSTRAINT-DEFINITIONS-START

6.5 Short Message

Short Messages can be transmitted on PDCCH using P-RNTI with or without associated *Paging* message using Short Message field in DCI format 1_0 (see TS 38.212 [17], clause 7.3.1.2.1).

Table 6.5-1 defines Short Messages. Bit 1 is the most significant bit.

Table 6.5-1: Short Messages

| Bit | Short Message |
|-------|--|
| 1 | systemInfoModification
If set to 1: indication of a BCCH modification other than <i>SIB6</i> , <i>SIB7</i> , <i>SIB8</i> and <i>posSIBs</i> . |
| 2 | etwsAndCmasIndication
If set to 1: indication of an ETWS primary notification and/or an ETWS secondary notification and/or a CMAS notification. |
| 3 | stopPagingMonitoring
This bit can be used for only operation with shared spectrum channel access and if <i>nrofPDCCH-MonitoringOccasionPerSSB-InPO</i> is present.
If set to 1: indication that the UE may stop monitoring PDCCH occasion(s) for paging in this Paging Occasion as specified in TS 38.304 [20], clause 7.1. |
| 4 | systemInfoModification-eDRX
If set to 1: indication of a BCCH modification other than <i>SIB6</i> , <i>SIB7</i> , <i>SIB8</i> and <i>posSIBs</i> . This indication applies only to UEs using IDLE eDRX cycle longer than the BCCH modification period. |
| 5 | adaptiveRAResources
If set to 1: Indication of activation for adaptive random access resources. |
| 6 – 8 | Not used in this release of the specification, and shall be ignored by UE if received. |

6.6.2 Message definitions

– *MasterInformationBlockSidelink*

The *MasterInformationBlockSidelink* includes the system information transmitted by a UE via SL-BCH.

Signalling radio bearer: N/A

RLC-SAP: TM

Logical channel: SBCCH

Direction: UE to UE

MasterInformationBlockSidelink

```
-- ASN1START
-- TAG-MASTERINFORMATIONBLOCKSIDELINK-START

MasterInformationBlockSidelink ::=
    SEQUENCE {
        sl-TDD-Config-r16          BIT STRING (SIZE (12)),
        inCoverage-r16             BOOLEAN,
        directFrameNumber-r16      BIT STRING (SIZE (10)),
        slotIndex-r16             BIT STRING (SIZE (7)),
        reservedBits-r16          BIT STRING (SIZE (2))
    }

-- TAG-MASTERINFORMATIONBLOCKSIDELINK-STOP
-- ASN1STOP
```

| MasterInformationBlockSidelink field descriptions |
|---|
| directFrameNumber
Indicates the frame number in which S-SSB transmitted. |
| inCoverage
Value true indicates that the UE transmitting the <i>MasterInformationBlockSidelink</i> is in network coverage, or UE selects GNSS timing as the synchronization reference source. |
| slotIndex
Indicates the slot index in which S-SSB transmitted. |

– MeasurementReportSidelink

The *MeasurementReportSidelink* message is used for the indication of measurement results of NR sidelink.

| MeasurementReportSidelink field descriptions |
|--|
| sl-MeasId
Identifies the sidelink measurement identity for which the reporting is being performed. |
| sl-MeasResult
Measured RSRP results of a unicast destination. |
| sl-RSRP-DedicatedSL-PRS-RP
Measured SL PRS-based filtered RSRP. |
| sl-RelayIndicationMP
Indicate the reported L2 U2N Relay UE supports RRC connection establishment/resume for MP operation triggered by receiving <i>RemoteUEInformationSidelink</i> containing the <i>connectionForMP</i> as specified in 5.3.3.1a and 5.3.13.1a in Rel-18. |
| sl-RelayUE-HopType
Indicates the hop type as single-hop if the relay service offered by the concerned L2 U2N Relay UE is single hop relay service or to multi-hop if the relay service offered by the concerned L2 U2N Relay UE is multi hop relay service. |

– NotificationMessageSidelink

The *NotificationMessageSidelink* message is used to send notification message from U2N Relay UE to the connected U2N Remote UE or from U2U Relay UE to the connected U2U Remote UE.

- Signalling radio bearer: SL-SRB3
- RLC-SAP: AM

| RemoteUEInformationSidelink-IEs field descriptions | |
|--|--|
| connectionForMP | Indicates the connected L2 U2N Relay UE by the L2 U2N Remote UE that the access is for MP. |
| sl-DestinationIdentityRemoteUE | Indicates the peer L2 U2U Remote UE upon end-to-end PC5 connection failure or release. |
| sl-PagingCycleRemoteUE | Indicates the L2 U2N Remote UE's UE specific DRX cycle as the minimum value of the one provided by upper layers (if configured) and the one provided by RRC layer (if configured). Value rf32 corresponds to 32 radio frames, value rf64 corresponds to 64 radio frames and so on. |
| sl-PagingIdentityRemoteUE | Indicates the L2 U2N Remote UE's paging UE ID. |
| sl-PagingInfo-RemoteUE | Indicates the paging information used by L2 U2N Relay UE in case of single hop or L2 Last U2N Relay UE to perform the connected L2 U2N Remote UE's or the child UE's paging monitoring. |
| SL-PagingInfo-RemoteUE-List | Contains a list of paging information for the downstream remote UEs |
| sl-RequestedPosSIB-List | Contains a list of requested PosSIBs. |
| sl-RequestedSIB-List | Contains a list of requested SIBs. |
| sl-SFN-DFN-OffsetRequested | If present, this field indicates that the L2 U2N Remote UE requests the L2 U2N Relay UE to provide the SFN-DFN offset in a subsequent <i>RRCReconfigurationSidelink</i> message. |
| SL-SIB-ReqInfo | Indicates the requested SIB type. Values sibNotReq11, sibNotReq10, ..., sibNotReq1 shall be ignored by L2 U2N relay UE (i.e., no SIB requested). |

| Conditional presence | Explanation |
|----------------------|--|
| GNSS-ID-SBAS | The field is mandatory present if <i>gnss-id</i> is set to <i>sbas</i> . It is absent otherwise. |

– *RRCReconfigurationSidelink*

The *RRCReconfigurationSidelink* message is the command to AS configuration of the PC5 RRC connection. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

```

| <i>RRCReconfigurationSidelink</i> field descriptions |
|---|
| <i>sl-AbsoluteFrequencyPointA</i>
Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A. |
| <i>sl-CarrierToAddModList</i>
Indicate the carrier(s) to be added/modified for transmission by UE transmitting <i>RRCReconfigurationSidelink</i> message, corresponding to the frequency in <i>sl-FreqInfoListSizeExt</i> broadcast in <i>SIB12</i> or corresponding to the frequency in <i>sl-PreconfigFreqInfoListSizeExt</i> in <i>SL-PreconfigurationNR</i> . |
| <i>sl-CarrierToReleaseList</i>
Indicate the carrier(s) to be released for the transmission by UE transmitting <i>RRCReconfigurationSidelink</i> message. |
| <i>sl-CSI-RS-FreqAllocation</i>
Indicates the frequency domain position for sidelink CSI-RS. |
| <i>sl-CSI-RS-FirstSymbol</i>
Indicates the position of first symbol of sidelink CSI-RS. |
| <i>sl-DRX-ConfigUC-PC5</i>
Indicates the NR sidelink DRX configuration for unicast communication, as specified in TS 38.321 [3]. |
| <i>sl-LatencyBoundCSI-Report</i>
Indicates the latency bound of SL CSI report from the associated SL CSI triggering in terms of number of slots. |
| <i>sl-LatencyBoundIUC-Report</i>
Indicates the latency bound of SL Inter-UE coordination report from the associated SL Inter-UE coordination explicit request triggering in terms of number of slots. |
| <i>sl-LocalID-PairList</i>
Indicate a list of local ID pair which is assigned for one end-to-end PC5 connection by the L2 U2U Relay UE. |
| <i>sl-LogicalChannelIdentity</i>
Indicates the identity of the sidelink logical channel, as specified in TS 38.321 [3], clause 6.2.4. If the <i>sl-LogicalChannelIdentity-v1800</i> is present, the UE shall ignore the <i>sl-LogicalChannelIdentity-r16</i> field. |
| <i>sl-MappedQoS-FlowsToAddList</i>
Indicate the QoS flows to be mapped to the configured sidelink DRB. Each entry is indicated by the <i>SL-PQFI</i> , which is used between UEs, as defined in TS 23.287 [55]. |
| <i>sl-MappedQoS-FlowsToReleaseList</i>
Indicate the QoS flows to be released from the configured sidelink DRB. Each entry is indicated by the <i>SL-PQFI</i> , which is used between UEs, as defined in TS 23.287 [55]. |
| <i>sl-MeasConfig</i>
Indicates the sidelink measurement configuration for the unicast destination. |
| <i>sl-OffsetToCarrier</i>
Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the subcarrierSpacing defined for this carrier). The maximum value corresponds to $275 \cdot 8 - 1$. See TS 38.211 [16], clause 4.4.2. |
| <i>sl-OutOfOrderDelivery</i>
Indicates whether or not outOfOrderDelivery specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the sidelink radio bearer is established. |
| <i>sl-PDCP-SN-Size</i>
Indicates the PDCP SN size of the configured sidelink DRB. |
| <i>sl-Resetconfig</i>
Indicates that the full configuration should be applicable for the <i>RRCReconfigurationSidelink</i> message. |
| <i>sl-RLC-BearerToAddModList</i>
Indicate the additional Sidelink RLC bearer to be added / modified for the configured sidelink SRB/DRB. |
| <i>sl-RLC-BearerToReleaseList</i>
Indicate the additional Sidelink RLC bearer to be released for the configured sidelink SRB/DRB. |

| |
|--|
| sl-SDAP-Header |
| Indicates whether or not a SDAP header is present on this sidelink DRB. |
| sl-SFN-DFN-Offset |
| Indicates the SFN-DFN offset to be used for determining the SFN timeline based on the DFN timeline. |
| sl-SRB-IdentityWithDuplication |
| Indicate the sidelink SRB for which duplication is configured. |
| slrb-PC5-ConfigIndex |
| Indicates the identity of the configuration of a sidelink DRB. In case of L2 U2U relay, only value 4-31 can be signaled for an end-to-end sidelink DRB, and all other values are reserved. |

| SL-SRAP-ConfigPC5 field descriptions |
|---|
| sl-RemoteUE-LocalIdentity |
| Indicates the local UE ID of the L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66]. |
| sl-RemoteUE-L2Identity |
| Indicates the Source L2 ID of the L2 U2U Remote UE as specified in TS 23.304 [65]. |
| sl-PeerRemoteUE-LocalIdentity |
| Indicates the local UE ID of the peer L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66]. |
| sl-PeerRemoteUE-L2Identity |
| Indicates the destination L2 ID identifying the peer L2 U2U Remote UE as specified in TS 23.304 [65]. |

– *RRCReconfigurationCompleteSidelink*

The *RRCReconfigurationCompleteSidelink* message is used to confirm the successful completion of a PC5 RRC AS reconfiguration. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

| UEInformationRequestSidelink field descriptions |
|---|
| sl-E2E-QoS-InfoListPC5
Indicates the per-QoS flow QoS info for a list of end-to-end PC5 connections with each connection indicated by the destination L2 ID of the peer L2 U2U Remote UE. In addition, the end-to-end SLRB index is included to indicate the mapping from the QoS flow to the SLRB. |

| SL-E2E-QoS-InfoPC5 field descriptions |
|---|
| sl-DestinationIdentityRemoteUE
Indicates the destination L2 ID of the peer L2 U2U Remote UE for an end-to-end PC5 connection. |
| sl-E2E-SLRB-Index
Indicates the index of an end-to-end SLRB. |
| sl-QoS-InfoList
List of QoS profile of the sidelink QoS flow for an end-to-end PC5 connection, with each QoS flow indicated by <i>sl-QoS-FlowIdentity</i> which is unique for different end-to-end PC5 connection in the scope of UE, and uniquely identifies one sidelink QoS flow between the L2 U2U Remote UE and the L2 U2U Relay UE. |

– UEInformationResponseSidelink

The *UEInformationResponseSidelink* message is used to deliver UE information in sidelink, e.g. the split QoS information for L2 U2U Relay operation.

- Signalling radio bearer: SL-SRB3
- RLC-SAP: AM
- Logical channel: SCCH
- Direction: L2 U2U Relay UE to L2 U2U Remote UE

7 Variables and constants

7.1 Timers

7.1.1 Timers (Informative)

| Timer | Start | Stop | At expiry |
|-------|--|---|--|
| T300 | Upon transmission of <i>RRCSetupRequest</i> . | Upon reception of <i>RRCSetup</i> or <i>RRCReject</i> message, cell re-selection, relay (re)selection or cell selection by a L2 U2N Remote UE, and upon abortion of connection establishment by upper layers. | Perform the actions as specified in 5.3.3.7. |
| T301 | Upon transmission of <i>RRCReestablishmentRequest</i> | Upon reception of <i>RRCReestablishment</i> or <i>RRCSetup</i> message as well as when the selected cell becomes unsuitable or the (re)selected L2 U2N Relay UE becomes unsuitable, upon reception of <i>NotificationMessageSidelink</i> indicating <i>relayUE-HO</i> or <i>relayUE-CellReselection</i> . | Go to RRC_IDLE |
| T302 | Upon reception of <i>RRCReject</i> while performing RRC connection establishment or resume, upon reception of <i>RRCRelease</i> with <i>waitTime</i> . | Upon entering RRC_CONNECTED or RRC_IDLE, upon cell re-selection, upon cell change due to relay (re)selection or cell selection by a L2 U2N Remote UE, and upon reception of <i>RRCReject</i> message. | Inform upper layers about barring alleviation as specified in 5.3.14.4 |

| Timer | Start | Stop | At expiry |
|-------|---|--|--|
| T304 | <p>Upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for the MCG which does not include <i>sl-PathSwitchConfig</i>, or upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for the SCG not indicated as deactivated in the NR or E-UTRA message containing the <i>RRCReconfiguration</i> message or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i>.</p> <p>Also, for the MCG and SCG upon an indication from lower layer that an LTM cell switch procedure is triggered and, for the MCG, upon performing an LTM cell switch procedure following cell selection performed while timer T311 is running.</p> | <p>Upon successful completion of random access on the corresponding SpCell. Upon receiving an indication from lower layers of successful completion of Rach-less handover, or upon receiving an indication from lower layers of successful completion of an LTM RACH-less cell switch.</p> <p>For T304 of SCG, upon SCG release.</p> | <p>For T304 of MCG, in case of the handover from NR or intra-NR handover, or path switch from a L2 U2N Relay UE to a NR cell, or an LTM cell switch procedure, initiate the RRC re-establishment procedure; In case of handover to NR, perform the actions defined in the specifications applicable for the source RAT. If any DAPS bearer is configured and if there is no RLF in source PCell, initiate the failure information procedure.</p> <p>For T304 of SCG, inform network about the reconfiguration with sync failure by initiating the SCG failure information procedure as specified in 5.7.3.</p> |

| Timer | Start | Stop | At expiry |
|-------|---|--|---|
| T310 | Upon detecting physical layer problems for the SpCell i.e. upon receiving N310 consecutive out-of-sync indications from lower layers. | Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, upon receiving RRCReconfiguration with <i>reconfigurationWithSync</i> for that cell group, upon reception of <i>MobilityFromNRCommand</i> , upon the reconfiguration of <i>rlf-TimersAndConstant</i> , upon initiating the connection re-establishment procedure, upon conditional reconfiguration execution i.e. when applying a stored RRCReconfiguration message including <i>reconfigurationWithSync</i> for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon initiating the MCG failure information procedure.
Upon SCG release, if the T310 is kept in SCG. | If the T310 is kept in MCG: If AS security is not activated: go to RRC_IDLE else: initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure as specified in 5.3.7 or the procedure as specified in 5.3.10.3 if any DAPS bearer is configured.
If the T310 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure as specified in 5.7.3. |
| T311 | Upon initiating the RRC connection re-establishment procedure | Upon selection of a suitable NR cell, or upon selection of a suitable L2 U2N Relay UE, or a cell using another RAT. | Enter RRC_IDLE |

| Timer | Start | Stop | At expiry |
|-------|--|---|---|
| T312 | <p>If T312 is configured in MCG: Upon triggering a measurement report for a measurement identity for which T312 has been configured and <i>useT312</i> has been set to true, while T310 in PCell is running.</p> <p>If T312 is configured in SCG and <i>useT312</i> has been set to true: Upon triggering a measurement report for a measurement identity for which T312 has been configured, while T310 in PSCell is running.</p> | <p>Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group, upon reception of <i>MobilityFromNRCommand</i>, upon initiating the connection re-establishment procedure, upon the reconfiguration of <i>rll-TimersAndConstant</i>, upon initiating the MCG failure information procedure, upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon the expiry of T310 in corresponding SpCell. Upon SCG release, if the T312 is kept in SCG</p> | <p>If the T312 is kept in MCG, initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure.</p> <p>If the T312 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure as specified in 5.7.3.</p> |
| T316 | Upon transmission of the <i>MCGFailureInformation</i> message | Upon receiving <i>RRCRelease</i> , <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for the PCell, <i>MobilityFromNRCommand</i> , or upon initiating the re-establishment procedure | Perform the actions as specified in 5.7.3b.5. |
| T319 | Upon transmission of <i>RRCResumeRequest</i> or <i>RRCResumeRequest1</i> when the resume procedure is not initiated for SDT. | Upon reception of <i>RRCResume</i> , <i>RRCSetup</i> , <i>RRCRelease</i> , <i>RRCRelease</i> with <i>suspendConfig</i> or <i>RRCReject</i> message, upon cell re-selection or upon relay (re)selection. | Perform the actions as specified in 5.3.13.5. |

| Timer | Start | Stop | At expiry |
|-------|--|---|---|
| T319a | Upon transmission of <i>RRCResumeRequest</i> or <i>RRCResumeRequest1</i> when the resume procedure is initiated for SDT. | Upon reception of <i>RRCResume</i> , <i>RRCSetup</i> , <i>RRCRelease</i> , <i>RRCReject</i> message or upon failure to resume RRC connection for SDT as specified in 5.3.13.5 or upon cell reselection. | Perform the actions as specified in 5.3.13.5. |
| T320 | Upon reception of <i>t320</i> or upon cell (re)selection to NR from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied). | Upon entering RRC_CONNECTED, upon reception of <i>RRCRelease</i> , when PLMN selection or SNPN selection is performed on request by NAS, when the UE enters RRC_IDLE from RRC_INACTIVE, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT). | Discard the cell reselection priority information provided by dedicated signalling. |
| T321 | Upon receiving <i>measConfig</i> including a <i>reportConfig</i> with the <i>reportType</i> set to <i>reportCGI</i> | Upon acquiring the information needed to set all fields of <i>cgi-info</i> , upon receiving <i>measConfig</i> that includes removal of the <i>reportConfig</i> with the <i>reportType</i> set to <i>reportCGI</i> and upon detecting that a cell is not broadcasting SIB1. | Initiate the measurement reporting procedure, stop performing the related measurements. |
| T322 | Upon receiving <i>measConfig</i> including <i>reportConfigNR</i> with the <i>reportType</i> set to <i>reportSFTD</i> and <i>drx-SFTD-NeighMeas</i> is set to <i>true</i> . | Upon acquiring the SFTD measurement results, upon receiving <i>measConfig</i> that includes removal of the <i>reportConfig</i> with the <i>reportType</i> set to <i>reportSFTD</i> . | Initiate the measurement reporting procedure, stop performing the related measurements. |
| T325 | Upon reception of <i>RRCRelease</i> message with <i>deprioritisationTimer</i> . | When PLMN selection or SNPN selection is performed on request by NAS according to TS 38.304 [20]. | Stop deprioritisation of all frequencies or NR signalled by <i>RRCRelease</i> and discard the stored deprioritisation request(s). |
| T330 | Upon receiving <i>LoggedMeasurementConfiguration</i> message | Upon log volume exceeding the suitable UE memory, upon initiating the release of <i>LoggedMeasurementConfiguration</i> procedure | Perform the actions specified in 5.5a.1.4 |

| Timer | Start | Stop | At expiry |
|---|--|--|--|
| T331 | Upon receiving <i>RRCRelease</i> message with <i>measIdleDuration</i> | Upon receiving <i>RRCSetup</i> , <i>RRCResume</i> , <i>RRCRelease</i> with idle/inactive measurement configuration, upon cell selection/reselection to a cell that does not belong to the <i>validityArea</i> (if configured), or upon cell re-selection to another RAT. | Perform the actions as specified in 5.7.8.3. |
| T342 | Upon transmitting <i>UEAssistanceInformation</i> message with <i>DelayBudgetReport</i> . | Upon releasing <i>delayBudgetReportingConfig</i> during the connection re-establishment/resume procedures, and upon receiving <i>delayBudgetReportingConfig</i> set to <i>release</i> . | No action. |
| T345 | Upon transmitting <i>UEAssistanceInformation</i> message with <i>overheatingAssistance</i> | Upon releasing <i>overheatingAssistanceConfig</i> during the connection re-establishment procedure, upon initiating the connection resumption procedure, and upon receiving <i>overheatingAssistanceConfig</i> set to <i>release</i> . | No action. |
| T346a
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>drx-Preference</i> . | Upon releasing <i>drx-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>drx-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346b
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxBW-Preference</i> . | Upon releasing <i>maxBW-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxBW-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |

| Timer | Start | Stop | At expiry |
|---|--|---|--|
| T346c
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxCC-Preference</i> . | Upon releasing <i>maxCC-PreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxCC-PreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346d
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>maxMIMO-LayerPreference</i> . | Upon releasing <i>maxMIMO-LayerPreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>maxMIMO-LayerPreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346e
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>minSchedulingOffsetPreference</i> . | Upon releasing <i>minSchedulingOffsetPreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>minSchedulingOffsetPreferenceConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346f | Upon transmitting <i>UEAssistanceInformation</i> message with <i>releasePreference</i> . | Upon releasing <i>releasePreferenceConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>releasePreferenceConfig</i> set to <i>release</i> . | No action. |
| T346g | Upon transmitting <i>UEAssistanceInformation</i> message with <i>musim-PreferredRRC-State</i> . | Upon receiving <i>RRCRelease</i> , or upon receiving <i>musim-LeaveAssistanceConfig</i> set to <i>release</i> . | Perform the actions as specified in 5.3.8.6. |

| Timer | Start | Stop | At expiry |
|--|---|---|------------|
| T346h | Upon transmitting <i>UEAssistanceInformation</i> message with <i>musim-GapPreferenceList</i> and/or <i>musim-GapPriorityPreferenceList</i> and/or <i>musim-GapKeepPreferenceInformation</i> . | Upon releasing <i>musim-GapAssistanceConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>musim-GapAssistanceConfig</i> set to <i>release</i> . | No action. |
| T346i | Upon transmitting <i>UEAssistanceInformation</i> message with <i>scg-DeactivationPreference</i> | Upon releasing <i>scg-DeactivationPreferenceConfig</i> during RRC connection re-establishment/resume or upon receiving <i>scg-DeactivationPreferenceConfig</i> set to <i>release</i> . | No action. |
| T346j (The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>rlm-RelaxationReportingConfig</i> . | Upon releasing <i>rlm-RelaxationReportingConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>rlm-RelaxationReportingConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346k (The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>bfd-RelaxationReportingConfig</i> . | Upon releasing <i>bfd-RelaxationReportingConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>bfd-RelaxationReportingConfig</i> set to <i>release</i> , or upon performing MR-DC release. | No action. |
| T346l (The UE maintains one instance of this timer per QoS flow) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>ul-TrafficInfo</i> for the concerned QoS flow. | Upon releasing <i>ul-TrafficInfoReportingConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>ul-TrafficInfoReportingConfig</i> set to <i>release</i> . | No action. |

| Timer | Start | Stop | At expiry |
|---|--|---|------------|
| T346m | Upon transmitting <i>UEAssistanceInformation</i> message with <i>multiRx-PreferenceFR2</i> . | Upon releasing <i>multiRx-PreferenceReportingConfigFR2</i> during the connection re-establishment/resume procedures, upon receiving <i>multiRx-PreferenceReportingConfigFR2</i> set to release. | No action. |
| T346n | Upon transmission of MUSIM temporary restriction of <i>musim-CapRestriction</i> for affected bands or combination of bands and/or avoided band(s) or combination of bands. | Upon releasing <i>musim-CapabilityRestrictionConfig</i> during the connection re-establishment/resume procedures, or upon receiving <i>musim-CapabilityRestrictionConfig</i> set to release. | No action. |
| T346o | Upon transmission of <i>UEAssistanceInformation</i> message with <i>gapOccasionCancelRatio</i> . | Upon releasing <i>gapOccasionCancelRatioReportConfig</i> during the connection re-establishment/resume procedure or upon receiving <i>gapOccasionCancelRatioReportConfig</i> set to release. | No action. |
| T346p
(The UE maintains one instance of this timer per cell group) | Upon transmitting <i>UEAssistanceInformation</i> message with <i>lpwus-OffsetPreference</i> . | Upon releasing <i>lpwus-OffsetPreferenceConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>lpwus-OffsetPreferenceConfig</i> set to release, or upon performing MR-DC release. | No action. |
| T346q | Upon transmitting <i>UEAssistanceInformation</i> message with <i>fbs-Preference</i> . | Upon releasing <i>fbs-PreferenceReportingConfig</i> during the connection re-establishment/resume procedures, upon receiving <i>fbs-PreferenceReportingConfig</i> set to release. | No action. |

| Timer | Start | Stop | At expiry |
|-------|---|---|---|
| T348 | Upon transmission of MUSIM temporary restriction of <i>musim-CapRestriction</i> for serving cell(s) with capabilities restricted, release of SCell or PSCell or release of SCG. | Upon reception of <i>RRCReconfiguration</i> message that does not exceed UE temporary capability restriction indicated via <i>musim-CapRestriction</i> . | UE may apply the temporary UE capability restriction in accordance with the one indicated in the last transmission of the <i>UEAssistanceInformation</i> message including <i>musim-CapRestriction</i> . UE may apply the temporary capability restriction that SCG is not supported if <i>ServCellIndex</i> of PSCell was included in indicated <i>MUSIM-CellToRelease-r18</i> . |
| T350 | Upon transmitting <i>DedicatedSIBRequest</i> message with <i>requestedSIB-List</i> and/or <i>requestedPosSIB-List</i> or <i>requestedPeriodicAD-PosSIB-List</i> . | Upon acquiring the requested SIB(s) or posSIB(s), upon releasing <i>onDemandSIB-Request</i> during the connection re-establishment procedures, upon receiving <i>onDemandSIB-Request</i> set to release, upon reception of <i>RRCRelease</i> or upon successful change of PCell while in RRC_CONNECTED. | No action |
| T380 | Upon reception of t380 in <i>RRCRelease</i> . | Upon reception of <i>RRCResume</i> , <i>RRCSetup</i> or <i>RRCRelease</i> . | Perform the actions as specified in 5.3.13. |
| T390 | When access attempt is barred at access barring check for an Access Category. The UE maintains one instance of this timer per Access Category. | Upon cell (re)selection, upon relay (re)selection, upon entering RRC_CONNECTED, upon reception of <i>RRCReconfiguration</i> including <i>reconfigurationWithSync</i> , upon change of PCell while in RRC_CONNECTED, upon reception of <i>MobilityFromNRCommand</i> , or upon reception of <i>RRCRelease</i> . | Perform the actions as specified in 5.3.14.4. |
| T400 | Upon transmission of <i>RRCReconfigurationSidelink</i> | Upon reception of <i>RRCReconfigurationFailureSidelink</i> or <i>RRCReconfigurationCompleteSidelink</i> | Perform the Sidelink radio link failure related actions as specified in 5.8.9.3. |

| Timer | Start | Stop | At expiry |
|-------|---|--|---|
| T420 | Upon reception of the <i>RRCReconfiguration</i> message including <i>sl-PathSwitchConfig</i> where <i>sl-IndirectPathMaintain</i> is not included in <i>reconfigurationWithSync</i> | Upon successfully sending <i>RRCReconfigurationComplete</i> message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE) | Perform the RRC re-establishment procedure as specified in 5.3.7. |
| T421 | Upon reception of the <i>RRCReconfiguration</i> message including <i>sl-IndirectPathAddChange</i> where <i>sl-IndirectPathMaintain</i> is not included in <i>reconfigurationWithSync</i> | Upon successfully sending <i>RRCReconfigurationComplete</i> message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE) if split SRB1 with duplication is configured, or upon reception of <i>RRCReconfigurationCompleteSi delink</i> if split SRB1 with duplication is not configured, or upon initiation of indirect path failure information procedure. | Perform the Failure Information Reporting as specified in 5.7.3c. |
| T430 | Start or restart from the subframe indicated by <i>epochTime</i> upon reception of <i>SIB19</i> , or upon reception of <i>RRCReconfiguration</i> message for the target cell including <i>reconfigurationWithSync</i> , or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message for the target cell including <i>reconfigurationWithSync</i> , or upon satellite switch with resynchronization. | Stop T430, if it is running, for the source cell upon reception of <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> , or upon conditional reconfiguration execution i.e. when applying a stored <i>RRCReconfiguration</i> message including <i>reconfigurationWithSync</i> , or upon satellite switch with resynchronization. | Perform the actions as specified in 5.2.2.6. |

7.1.2 Timer handling

When the UE applies zero value for a timer, the timer shall be started and immediately expire unless explicitly stated otherwise.

7.2 Counters

| Counter | Reset | Incremented | When reaching max value |
|---------|--|---|-------------------------|
| N310 | Upon reception of "in-sync" indication from lower layers;
upon receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group;
upon initiating the connection re-establishment procedure. | Upon reception of "out-of-sync" from lower layer while the timer T310 is stopped. | Start timer T310 |
| N311 | Upon reception of "out-of-sync" indication from lower layers;
upon receiving <i>RRCReconfiguration</i> with <i>reconfigurationWithSync</i> for that cell group;
upon initiating the connection re-establishment procedure. | Upon reception of the "in-sync" from lower layer while the timer T310 is running. | Stop the timer T310. |

7.3 Constants

| Constant | Usage |
|----------|---|
| N310 | Maximum number of consecutive "out-of-sync" indications for the SpCell received from lower layers |
| N311 | Maximum number of consecutive "in-sync" indications for the SpCell received from lower layers |

7.4 UE variables

NOTE: To facilitate the specification of the UE behavioural requirements, UE variables are represented using ASN.1. Unless explicitly specified otherwise, it is however up to UE implementation how to store the variables. The optionality of the IEs in ASN.1 is used only to indicate that the values may not always be available.

– *NR-UE-Variables*

This ASN.1 segment is the start of the NR UE variable definitions.

```

-- NR-UE-VARIABLES-STOP
-- ASN1STOP

```

– *VarAppLayerIdleConfig*

The UE variable *VarAppLayerIdleConfig* includes the parameters of the application layer measurements stored in the UE while in RRC_IDLE.

***VarAppLayerIdleConfig* UE variable**

```

-- ASN1START
-- TAG-VARAPPLAYERIDLECONFIG-START

VarAppLayerIdleConfig-r18 ::=      SEQUENCE {
    appLayerIdleConfigList-r18      SEQUENCE (SIZE (1..maxNrofAppLayerMeas-r17)) OF VarAppLayerIdle-r18
}

VarAppLayerIdle-r18 ::=            SEQUENCE {
    measConfigAppLayerId-r18        MeasConfigAppLayerId-r17,
    serviceType-r18                 ENUMERATED {streaming, mtsi, vr, spare5, spare4, spare3, spare2, spare1},
    appLayerIdleInactiveConfig-r18 AppLayerIdleInactiveConfig-r18,
    appLayerMeasPriority-r18         INTEGER (1..16)
}
-- TAG-VARAPPLAYERIDLECONFIG-STOP
-- ASN1STOP
OPTIONAL

```

– *VarAppLayerPLMN-ListConfig*

The UE variable *VarAppLayerPLMN-ListConfig* includes the PLMNs to which application layer measurement reports and application layer measurement configurations are allowed to be sent.

***VarAppLayerPLMN-ListConfig* UE variable**

```

-- ASN1START
-- TAG-VARAPPLAYERPLMN-LISTCONFIG-START

VarAppLayerPLMN-ListConfig-r18 ::= SEQUENCE {
    plmnConfigList-r18              SEQUENCE (SIZE (1..maxNrofAppLayerMeas-r17)) OF VarAppLayerPLMN-List-r18
}

VarAppLayerPLMN-List-r18 ::=       SEQUENCE {
    measConfigAppLayerId-r18        MeasConfigAppLayerId-r17,
    plmn-IdentityList-r18           PLMN-IdentityList2-r16
}

-- TAG-VARAPPLAYERPLMN-LISTCONFIG-STOP
-- ASN1STOP

```

– *VarConditionalReconfig*

The UE variable *VarConditionalReconfig* includes the accumulated configuration of the conditional handover, conditional PSCell addition or conditional PSCell change configurations including the pointers to conditional handover, conditional PSCell addition, conditional PSCell change, or subsequent CPAC execution condition (associated *measId(s)*), the stored target candidate SpCell *RRReconfiguration*, the stored reference configuration, and the stored *SK-Counter* configuration.

VarConditionalReconfig UE variable

```
-- ASN1START
-- TAG-VARCONDITIONALRECONFIG-START

VarConditionalReconfig ::= SEQUENCE {
    condReconfigList          CondReconfigToAddModList-r16          OPTIONAL,
    scpac-ReferenceConfiguration-r18 ReferenceConfiguration-r18    OPTIONAL,
    sk-CounterConfiguration-r18 SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SK-CounterConfig-r18  OPTIONAL
}

-- TAG-VARCONDITIONALRECONFIG-STOP
-- ASN1STOP
```

– *VarConnEstFailReport*

The UE variable *VarConnEstFailReport* includes the connection establishment failure and/or connection resume failure information.

VarConnEstFailReport UE variable

```
-- ASN1START
-- TAG-VARCONNЕСТFAILREPORT-START

VarConnEstFailReport-r16 ::= SEQUENCE {
    connEstFailReport-r16 ConnEstFailReport-r16,
    networkIdentity-r18 CHOICE {
        plmn-Identity-r18 PLMN-Identity,
        snpn-Identity-r18 SNPN-Identity-r18
    }
}

SNPN-Identity-r18 ::= SEQUENCE {
    plmn-Identity-r18 PLMN-Identity,
    nid-r18           NID-r16
}

-- TAG-VARCONNЕСТFAILREPORT-STOP
-- ASN1STOP
```

– *VarConnEstFailReportList*

The UE variable *VarConnEstFailReportList* includes a list of the connection establishment failure and/or connection resume failure information.

***VarConnEstFailReportList* UE variable**

```
-- ASN1START
-- TAG-VARCONNЕСТFAILLREPORTLIST-START

VarConnEstFailReportList-r17 ::= SEQUENCE {
    connEstFailReportList-r17 SEQUENCE (SIZE (1..maxCEFReport-r17)) OF VarConnEstFailReport-r16
}

-- TAG-VARCONNЕСТFAILLREPORTLIST-STOP
-- ASN1STOP
```

– *VarCSI-LogMeasReport*

The UE variable *VarCSI-LogMeasReport* includes the logged CSI measurements information for network-side data collection in accordance with *CSI-LoggedMeasurementConfig*.

***VarCSI-LogMeasReport* UE variable**

```
-- ASN1START
-- TAG-VARCSI-LOGMEASREPORT-START

VarCSI-LogMeasReport-r19 ::= SEQUENCE {
    csi-LogMeasInfoCellList-r19 CSI-LogMeasInfoCellList-r19
}

-- TAG-VARCSI-LOGMEASREPORT-STOP
-- ASN1STOP
```

– *VarLogMeasConfig*

The UE variable *VarLogMeasConfig* includes the configuration of the logging of measurements to be performed by the UE while in RRC_IDLE, RRC_INACTIVE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements. The UE performs logging of measurements only while in RRC_IDLE and RRC_INACTIVE.

***VarLogMeasConfig* UE variable**

```
-- ASN1START
-- TAG-VARLOGMEASCONFIG-START

VarLogMeasConfig-r16 ::= SEQUENCE {
    areaConfiguration-r16 AreaConfiguration-r16 OPTIONAL,

```

```

    bt-NameList-r16          BT-NameList-r16          OPTIONAL,
    wlan-NameList-r16        WLAN-NameList-r16        OPTIONAL,
    sensor-NameList-r16      Sensor-NameList-r16      OPTIONAL,
    loggingDuration-r16      LoggingDuration-r16,
    reportType               CHOICE {
        periodical           LoggedPeriodicalReportConfig-r16,
        eventTriggered       LoggedEventTriggerConfig-r16
    },
    earlyMeasIndication-r17   ENUMERATED {true}        OPTIONAL,
    areaConfiguration-r17     AreaConfiguration-r17     OPTIONAL,
    areaConfiguration-v1800   AreaConfiguration-v1800   OPTIONAL,
    areaConfigurationNTN-List-r19 AreaConfigurationNTN-List-r19 OPTIONAL
}
-- TAG-VARLOGMEASCONFIG-STOP
-- ASN1STOP

```

– *VarLogMeasReport*

The UE variable *VarLogMeasReport* includes the logged measurements information.

VarLogMeasReport UE variable

```

-- ASN1START
-- TAG-VARLOGMEASREPORT-START

VarLogMeasReport-r16 ::= SEQUENCE {
    absoluteTimeInfo-r16      AbsoluteTimeInfo-r16,
    traceReference-r16        TraceReference-r16,
    traceRecordingSessionRef-r16 OCTET STRING (SIZE (2)),
    tce-Id-r16                OCTET STRING (SIZE (1)),
    logMeasInfoList-r16       LogMeasInfoList-r16,
    sigLoggedMeasType-r17     ENUMERATED {true},
    identityList-r18          CHOICE {
        plmn-IdentityList-r18      PLMN-IdentityList2-r16,
        snpn-ConfigID-List-r18     SNPN-ConfigID-List-r18
    }
}

-- TAG-VARLOGMEASREPORT-STOP
-- ASN1STOP

```

– *VarLTM-ExecutionConditionList*

The UE variable *VarLTM-ExecutionConditionList* is used to store the LTM execution conditions for MCG LTM currently used by the UE.

***VarLTM-ExecutionConditionList* UE variable**

```
-- ASN1START
-- TAG-VARLTM-EXECUTIONCONDITIONLIST-START

VarLTM-ExecutionConditionList-r19 ::= SEQUENCE {
    ltm-ExecutionConditionList-r19      LTM-ExecutionConditionList-r19
}

-- TAG-VARLTM-EXECUTIONCONDITIONLIST-STOP
-- ASN1STOP
```

– *VarLTM-ServingCellNoResetID*

The IE *VarLTM-ServingCellNoResetID* is used to store the ID associated with the serving cell based on which the UE determines whether a L2 reset is needed or not upon an LTM cell switch procedure which does not involve security key change.

***VarLTM-ServingCellNoResetID* UE variable**

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLNORESETID-START

VarLTM-ServingCellNoResetID-r18 ::= SEQUENCE {
    ltm-ServingCellNoResetID-r18      INTEGER (1..maxNrofLTM-Configs-plus1-r18) OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLNORESETID-STOP
-- ASN1STOP
```

– *VarLTM-ServingCellNoSecurityChange*

The IE *VarLTM-ServingCellNoSecurityChange* is used to store the ID associated with the serving cell based on which the UE determines whether a security change is needed or not upon an LTM cell switch procedure and the list of *sk-counter* value that can be used when a security key change is performed at the SCG.

***VarLTM-ServingCellNoSecurityChange* UE variable**

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLNOSECURITYCHANGE-START

VarLTM-ServingCellNoSecurityChange-r19 ::= SEQUENCE {
    ltm-ServingCellNoSecurityChangeID-r19      INTEGER (1..maxNrofLTM-Configs-plus1-r18) OPTIONAL,
    ltm-SK-Counters-r19                        SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SK-CounterConfigLTM-r19 OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLNOSECURITYCHANGE-STOP
```

```
-- ASN1STOP
```

– *VarLTM-ServingCellUE-MeasuredTA-ID*

The IE *VarLTM-ServingCellUE-MeasuredTA-ID* is used to store the ID associated with the serving cell based on which the UE determines whether UE-based TA measurements are needed or not.

VarLTM-ServingCellUE-MeasuredTA-ID UE variable

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-START

VarLTM-ServingCellUE-MeasuredTA-ID-r18 ::= SEQUENCE {
    ltm-ServingCellUE-MeasuredTA-ID-r18    INTEGER (1..maxNrofLTM-Configs-plus1-r18)    OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-STOP
-- ASN1STOP
```

– *VarMeasConfig*

The UE variable *VarMeasConfig* includes the accumulated configuration of the measurements to be performed by the UE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements.

VarMeasConfig UE variable

```
-- ASN1START
-- TAG-VARMEASCONFIG-START

VarMeasConfig ::= SEQUENCE {
    -- Measurement identities
    measIdList                MeasIdToAddModList                OPTIONAL,
    -- Measurement objects
    measObjectList            MeasObjectToAddModList            OPTIONAL,
    -- Reporting configurations
    reportConfigList          ReportConfigToAddModList          OPTIONAL,
    -- Other parameters
    quantityConfig            QuantityConfig                    OPTIONAL,
    s-MeasureConfig           CHOICE {
        ssb-RSRP              RSRP-Range,
        csi-RSRP              RSRP-Range
    }                        OPTIONAL,
    speedStatePars-r19        SpeedStatePars-r19                OPTIONAL
}

}
```

```
-- TAG-VARMEASCONFIG-STOP
-- ASN1STOP
```

– *VarMeasConfigSL*

The UE variable *VarMeasConfigSL* includes the accumulated configuration of the NR sidelink measurements to be performed by the UE of unicast destination.

VarMeasConfigSL UE variable

```
-- ASN1START
-- TAG-VARMEASCONFIGSL-START

VarMeasConfigSL-r16 ::= SEQUENCE {
    -- NR sidelink measurement identities
    sl-MeasIdList-r16 SL-MeasIdList-r16 OPTIONAL,
    -- NR sidelink measurement objects
    sl-MeasObjectList-r16 SL-MeasObjectList-r16 OPTIONAL,
    -- NR sidelink reporting configurations
    sl-ReportConfigList-r16 SL-ReportConfigList-r16 OPTIONAL,
    -- Other parameters
    sl-QuantityConfig-r16 SL-QuantityConfig-r16 OPTIONAL
}

-- TAG-VARMEASCONFIGSL-STOP
-- ASN1STOP
```

– *VarMeasIdleConfig*

The UE variable *VarMeasIdleConfig* includes the configuration of the measurements to be performed by the UE while in RRC_IDLE or RRC_INACTIVE for NR inter-frequency and inter-RAT (i.e. EUTRA) measurements.

VarMeasIdleConfig UE variable

```
-- ASN1START
-- TAG-VARMEASIDLECONFIG-START

VarMeasIdleConfig-r16 ::= SEQUENCE {
    measIdleCarrierListNR-r16 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasIdleCarrierNR-r16 OPTIONAL,
    measIdleCarrierListEUTRA-r16 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasIdleCarrierEUTRA-r16 OPTIONAL,
    measIdleDuration-r16 ENUMERATED {sec10, sec30, sec60, sec120, sec180, sec240, sec300, spare},
    validityAreaList-r16 ValidityAreaList-r16 OPTIONAL
}

VarEnhMeasIdleConfig-r18 ::= SEQUENCE {
    measIdleValidityDuration-r18 MeasurementValidityDuration-r18 OPTIONAL
}

-- TAG-VARMEASIDLECONFIG-STOP
-- ASN1STOP
```

```
-- TAG-VARMEASIDLECONFIG-STOP
-- ASN1STOP
```

– *VarMeasIdleReport*

The UE variable *VarMeasIdleReport* includes the logged measurements information.

VarMeasIdleReport UE variable

```
-- ASN1START
-- TAG-VARMEASIDLEREPORT-START

VarMeasIdleReport-r16 ::= SEQUENCE {
    measReportIdleNR-r16      MeasResultIdleNR-r16      OPTIONAL,
    measReportIdleEUTRA-r16    MeasResultIdleEUTRA-r16    OPTIONAL
}

-- TAG-VARMEASIDLEREPORT-STOP
-- ASN1STOP
```

– *VarMeasReportList*

The UE variable *VarMeasReportList* includes information about the measurements for which the triggering conditions have been met.

VarMeasReportList UE variable

```
-- ASN1START
-- TAG-VARMEASREPORTLIST-START

VarMeasReportList ::= SEQUENCE (SIZE (1..maxNrofMeasId)) OF VarMeasReport

VarMeasReport ::= SEQUENCE {
    -- List of measurement that have been triggered
    measId                MeasId,
    cellsTriggeredList     CellsTriggeredList          OPTIONAL,
    numberOfReportsSent     INTEGER,
    cli-TriggeredList-r16   CLI-TriggeredList-r16       OPTIONAL,
    tx-PoolMeasToAddModListNR-r16 Tx-PoolMeasList-r16  OPTIONAL,
    relaysTriggeredList-r17 RelaysTriggeredList-r17    OPTIONAL,
    cellsMetLeavingCond-r18 SEQUENCE (SIZE (1..maxCellReport)) OF PhysCellId  OPTIONAL,
    reportedBestNeighbourCell-r18 SEQUENCE (SIZE (1..2)) OF PhysCellId  OPTIONAL
}

CellsTriggeredList ::= SEQUENCE (SIZE (1..maxNrofCellMeas)) OF CHOICE {
    physCellId          PhysCellId,
```

```

    physCellIdEUTRA                EUTRA-PhysCellId,
    physCellIdUTRA-FDD-r16          PhysCellIdUTRA-FDD-r16
  }

CLI-TriggeredList-r16 ::=          CHOICE {
    srs-RSRP-TriggeredList-r16     SRS-RSRP-TriggeredList-r16,
    cli-RSSI-TriggeredList-r16     CLI-RSSI-TriggeredList-r16
  }

SRS-RSRP-TriggeredList-r16 ::=    SEQUENCE (SIZE (1.. maxNrofCLI-SRS-Resources-r16)) OF SRS-ResourceId

CLI-RSSI-TriggeredList-r16 ::=    SEQUENCE (SIZE (1.. maxNrofCLI-RSSI-Resources-r16)) OF RSSI-ResourceId-r16

RelaysTriggeredList-r17 ::=       SEQUENCE (SIZE (1.. maxNrofRelayMeas-r17)) OF SL-SourceIdentity-r17

-- TAG-VARMEASREPORTLIST-STOP
-- ASN1STOP

```

– *VarMeasReportListSL*

The UE variable *VarMeasReportListSL* includes information about the NR sidelink measurements for which the triggering conditions have been met.

VarMeasReportListSL UE variable

```

-- ASN1START
-- TAG-VARMEASREPORTLISTSL-START

VarMeasReportListSL-r16 ::=       SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF VarMeasReportSL-r16

VarMeasReportSL-r16 ::=           SEQUENCE {
  -- List of NR sidelink measurement that have been triggered
  sl-MeasId-r16                    SL-MeasId-r16,
  sl-FrequencyTriggeredList-r16    SEQUENCE (SIZE (1..maxNrofFreqSL-r16)) OF ARFCN-ValueNR OPTIONAL,
  sl-NumberOfReportsSent-r16       INTEGER
}

-- TAG-VARMEASREPORTLISTSL-STOP
-- ASN1STOP

```

– *VarMeasReselectionConfig*

The UE variable *VarMeasReselectionConfig* includes the configuration for reporting the NR inter-frequency and inter-RAT (i.e. EUTRA) reselection measurements while in RRC_IDLE or RRC_INACTIVE for.

***VarMeasReselectionConfig* UE variable**

```
-- ASN1START
-- TAG-VARMEASRESELECTIONCONFIG-START

VarMeasReselectionConfig-r18 ::= SEQUENCE {
    measReselectionCarrierListNR-r18 SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasReselectionCarrierNR-r18 OPTIONAL,
    measReselectionValidityDuration-r18 MeasurementValidityDuration-r18 OPTIONAL
}

-- TAG-VARMEASRESELECTIONCONFIG-STOP
-- ASN1STOP
```

– *VarMobilityHistoryReport*

The UE variable *VarMobilityHistoryReport* includes the mobility history information.

***VarMobilityHistoryReport* UE variable**

```
-- ASN1START
-- TAG-VARMOBILITYHISTORYREPORT-START

VarMobilityHistoryReport-r16 ::= VisitedCellInfoList-r16

VarMobilityHistoryReport-r17 ::= SEQUENCE {
    visitedCellInfoList-r16 VisitedCellInfoList-r16,
    visitedPSCellInfoList-r17 VisitedPSCellInfoList-r17 OPTIONAL
}

-- TAG-VARMOBILITYHISTORYREPORT-STOP
-- ASN1STOP
```

– *VarPendingRNA-Update*

The UE variable *VarPendingRNA-Update* indicates whether there is a pending RNA update procedure or not. The setting of this BOOLEAN variable to *true* means that there is a pending RNA Update procedure.

***VarPendingRNA-Update* UE variable**

```
-- ASN1START
-- TAG-VARPENDINGRNA-UPDATE-START

VarPendingRNA-Update ::= SEQUENCE {
    pendingRNA-Update BOOLEAN OPTIONAL
}

-- TAG-VARPENDINGRNA-UPDATE-STOP
-- ASN1STOP
```

```
-- TAG-VARPENDINGRNA-UPDATE-STOP
-- ASN1STOP
```

– *VarRA-Report*

The UE variable *VarRA-Report* includes the random-access related information.

VarRA-Report UE variable

```
-- ASN1START
-- TAG-VARRA-REPORT-START

VarRA-Report-r16 ::= SEQUENCE {
    ra-ReportList-r16      RA-ReportList-r16,
    identityList-r18       CHOICE {
        plmn-IdentityList-r18  PLMN-IdentityList2-r16,
        snpn-IdentityList-r18  SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}

-- TAG-VARRA-REPORT-STOP
-- ASN1STOP
```

– *VarResumeMAC-Input*

The UE variable *VarResumeMAC-Input* specifies the input used to generate the *resumeMAC-I* during RRC Connection Resume procedure.

VarResumeMAC-Input UE variable

```
-- ASN1START
-- TAG-VARRESUMEMAC-INPUT-START

VarResumeMAC-Input ::= SEQUENCE {
    sourcePhysCellId      PhysCellId,
    targetCellIdentity     CellIdentity,
    source-c-RNTI          RNTI-Value
}

-- TAG-VARRESUMEMAC-INPUT-STOP
-- ASN1STOP
```

| <i>VarResumeMAC-Input</i> field descriptions |
|--|
| <i>targetCellId</i>
An input variable used to calculate the <i>resumeMAC-I</i> . Set to the <i>cellId</i> of the first <i>PLMN-Identity</i> included in the <i>PLMN-IdentityInfoList</i> broadcasted in <i>SIB1</i> of the target cell i.e. the cell the UE is trying to resume. |
| <i>source-c-RNTI</i>
Set to C-RNTI that the UE had in the PCell it was connected to prior to suspension of the RRC connection. |
| <i>sourcePhysCellId</i>
Set to the physical cell identity of the PCell the UE was connected to prior to suspension of the RRC connection. |

– *VarRLF-Report*

The UE variable *VarRLF-Report* includes the radio link failure information or handover failure information.

VarRLF-Report UE variable

```
-- ASN1START
-- TAG-VARRLF-REPORT-START

VarRLF-Report-r16 ::= SEQUENCE {
    rlf-Report-r16          RLF-Report-r16,
    identityList-r18        CHOICE {
        plmn-IdentityList-r18  PLMN-IdentityList2-r16,
        snpn-IdentityList-r18  SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}

-- TAG-VARRLF-REPORT-STOP
-- ASN1STOP
```

– *VarServingSecurityCellSetID*

The UE variable *VarServingSecurityCellSetID* includes the security cell set ID of serving PSCell.

VarServingSecurityCellSetID UE variable

```
-- ASN1START
-- TAG-VARSERVINGSECURITYCELLSETID-START

VarServingSecurityCellSetID ::= SEQUENCE {
    servingSecurityCellSetId-r18  INTEGER (1.. maxSecurityCellSet-r18)
}

-- TAG-VARSERVINGSECURITYCELLSETID-STOP
-- ASN1STOP
```

– *VarShortMAC-Input*

The UE variable *VarShortMAC-Input* specifies the input used to generate the *shortMAC-I* during RRC Connection Reestablishment procedure.

***VarShortMAC-Input* UE variable**

```
-- ASN1START
-- TAG-VARSHORTMAC-INPUT-START

VarShortMAC-Input ::= SEQUENCE {
    sourcePhysCellId      PhysCellId,
    targetCellIdentity     CellIdentity,
    source-c-RNTI          RNTI-Value
}

-- TAG-VARSHORTMAC-INPUT-STOP
-- ASN1STOP
```

| VarShortMAC-Input field descriptions |
|---|
| targetCellIdentity
An input variable used to calculate the <i>shortMAC-I</i> . Set to the <i>cellIdentity</i> of the first <i>PLMN-Identity</i> in the <i>PLMN-IdentityInfoList</i> broadcasted in <i>SIB1</i> of the target cell i.e. the cell the UE is trying to reestablish the connection. |
| source-c-RNTI
Set to C-RNTI that the UE had in the PCell it was connected to prior to the reestablishment. |
| sourcePhysCellId
Set to the physical cell identity of the PCell the UE was connected to prior to the reestablishment. |

– *VarSuccessHO-Report*

The UE variable *VarSuccessHO-Report* includes the successful handover information.

***VarSuccessHO-Report* UE variable**

```
-- ASN1START
-- TAG-VARSUCCESSHO-Report-START

VarSuccessHO-Report-r17 ::= SEQUENCE {
    successHO-Report-r17 SuccessHO-Report-r17,
    identityList-r18      CHOICE {
        plmn-IdentityList-r18 PLMN-IdentityList2-r16,
        snpn-IdentityList-r18 SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}
```

```
}  
-- TAG-VARSUCCESSHO-Report-STOP  
-- ASN1STOP
```

– *VarSuccessPSCell-Report*

The UE variable *VarSuccessPSCell-Report* includes the successful PSCell change or addition information.

VarSuccessPSCell-Report UE variable

```
-- ASN1START  
-- TAG-VARSUCCESSPSCELL-Report-START  
  
VarSuccessPSCell-Report-r18 ::= SEQUENCE {  
    successPSCell-Report-r18  
    identityList-r18 CHOICE {  
        plmn-IdentityList-r18 PLMN-IdentityList2-r16,  
        snpn-IdentityList-r18 SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18  
    }  
}  
  
-- TAG-VARSUCCESSPSCELL-Report-STOP  
-- ASN1STOP
```

– *VarTSS-Info*

The UE variable *VarTSS-Info* includes information about the current value of *eventID-TSS* and the current value of the global gNB Identity.

VarTSS-Info UE variable

```
-- ASN1START  
-- TAG-VARTSS-INFO-START  
  
VarTSS-Info-r18 ::= SEQUENCE {  
    storedEventID-r18 INTEGER (0..63),  
    storedGlobalGnbID-r18 SEQUENCE {  
        plmn-Identity-r18 PLMN-Identity,  
        gnb-ID-r18 BIT STRING (SIZE (22..32))  
    }  
}  
  
-- TAG-VARTSS-INFO-STOP  
-- ASN1STOP
```

— End of *NR-UE-Variables*

```
-- ASN1START
```

```
END
```

```
-- ASN1STOP
```

8 Protocol data unit abstract syntax

8.1 General

The RRC PDU contents in clause 6 and clause 10 are described using abstract syntax notation one (ASN.1) as specified in ITU-T Rec. X.680 [6] and X.681 [7]. Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in ITU-T Rec. X.691 [8].

The following encoding rules apply in addition to what has been specified in X.691:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in X.691, the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field;

NOTE: The terms 'leading bit' and 'trailing bit' are defined in ITU-T Rec. X.680. When using the 'bstring' notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

- When decoding types constrained with the ASN.1 Contents Constraint ("CONTAINING"), automatic decoding of the contained type should not be performed because errors in the decoding of the contained type should not cause the decoding of the entire RRC message PDU to fail. It is recommended that the decoder first decodes the outer PDU type that contains the OCTET STRING or BIT STRING with the Contents Constraint, and then decodes the contained type that is nested within the OCTET STRING or BIT STRING as a separate step;
- When decoding a) RRC message PDUs, b) BIT STRING constrained with a Contents Constraint, or c) OCTET STRING constrained with a Contents Constraint, PER decoders are required to never report an error if there are extraneous zero or non-zero bits at the end of the encoded RRC message PDU, BIT STRING or OCTET STRING.

8.2 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/across the radio interface contains the basic production as defined in X.691.

RRC PDUs shall be mapped to and from PDCP SDUs (in case of DCCH) or RLC SDUs (in case of PCCH, BCCH or CCCH) upon transmission and reception as follows:

- when delivering an RRC PDU as an PDCP SDU to the PDCP layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the PDCP SDU and onwards; and
- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and
- upon reception of an PDCP SDU from the PDCP layer, the first bit of the PDCP SDU shall represent the first bit of the RRC PDU and onwards; and
- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

8.3 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691. It always contains a multiple of 8 bits.

8.4 Extension

The following rules apply with respect to the use of protocol extensions:

- A transmitter compliant with this version of the specification shall, unless explicitly indicated otherwise on a PDU type basis, set the extension part empty. Transmitters compliant with a later version may send non-empty extensions;
- A transmitter compliant with this version of the specification shall set spare bits to zero.

8.5 Padding

If the encoded RRC message does not fill a transport block, the RRC layer shall add padding bits. This applies to PCCH and BCCH.

Padding bits shall be set to 0 and the number of padding bits is a multiple of 8.

Figure 8.5-1: RRC level padding

9 Specified and default radio configurations

Specified and default configurations are configurations of which the details are specified in the standard. Specified configurations are fixed while default configurations can be modified using dedicated signalling. The default value for the parameters not listed in following clauses shall be set such as the corresponding features are not configured, i.e. *release* or *false* unless explicitly stated otherwise.

NOTE: The UE applies the default values specified in the field description of ASN.1 parameters only when the parent IE is present. Hence, the UE does not apply all default values in field descriptions when it applies the "default radio configuration" in accordance with this clause.

9.1 Specified configurations

9.1.1 Logical channel configurations

9.1.1.1 BCCH configuration

Parameters

| Name | Value | Semantics description | Ver |
|-------------------------------|----------|-----------------------|-----|
| SDAP configuration | Not used | | |
| PDCP configuration | Not used | | |
| RLC configuration | TM | | |
| Logical channel configuration | Not used | | |

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.2 CCCH configuration

Parameters

| Name | Value | Semantics description | Ver |
|-------------------------------|----------|-----------------------|-----|
| SDAP configuration | Not used | | |
| PDCP configuration | Not used | | |
| RLC configuration | TM | | |
| Logical channel configuration | | | |
| >priority | 1 | Highest priority | |
| >prioritisedBitRate | infinity | | |
| >bucketSizeDuration | ms1000 | | |
| >logicalChannelGroup | 0 | | |

9.1.1.3 PCCH configuration

Parameters

| Name | Value | Semantics description | Ver |
|-------------------------------|----------|-----------------------|-----|
| SDAP configuration | Not used | | |
| PDCP configuration | Not used | | |
| RLC configuration | TM | | |
| Logical channel configuration | Not used | | |

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.4 SCCH configuration

Parameters that are specified for unicast of NR sidelink communication, which is used for the sidelink signalling radio bearer of PC5-RRC message. The SL-SRB using this SCCH configuration is named as SL-SRB3.

| Name | Value | Semantics description | Ver |
|--|-----------|--|-------|
| PDCP configuration | | | |
| > <i>t-Reordering</i> | Undefined | Selected by the receiving UE, up to UE implementation | |

9.1.1.6 MCCH configuration

Parameters that are specified for MCCH.

| Name | Value | Semantics description | Ver |
|-------------------------|-------|-----------------------|-----|
| RLC configuration | | UM RLC | |
| > <i>sn-FieldLength</i> | 6 | | |
| > <i>t-Reassembly</i> | ms0 | | |

9.1.1.7 MTCH configuration for MBS broadcast

Parameters that are specified for MBS broadcast MTCH.

| Name | Value | Semantics description | Ver |
|-------------------------|-------|-----------------------|-----|
| PDCP configuration | | | |
| > <i>t-Reordering</i> | ms0 | | |
| > <i>pdcp-SN-SizeDL</i> | 18 | | |
| RLC configuration | | UM RLC | |
| > <i>sn-FieldLength</i> | 12 | | |
| > <i>t-Reassembly</i> | ms0 | | |

9.1.2 Void

9.2 Default radio configurations

The following clauses only list default values for REL-15 parameters included in protocol version v15.3.0. For all fields introduced in a later protocol version, the default value is "released" or "false" unless explicitly specified otherwise. If the UE is to apply default configuration while it is configured with some critically extended fields, the UE shall apply the original version of those fields with only default values.

NOTE 1: In general, the signalling should preferably support a "release" option for fields introduced after v15.3.0. The "value not applicable" should be used restrictively, mainly limited to for fields which value is relevant only if another field is set to a value other than its default.

NOTE 2: For parameters in *ServingCellConfig*, the default values are specified in the corresponding specification.

9.2.1 Default SRB configurations

Parameters

| Name | Value | | | Semantics description | Ver |
|-------------------------------|----------|------|------|-----------------------|-----|
| | SRB1 | SRB2 | SRB3 | | |
| <i>PDCP-Config</i> | | | | | |
| > <i>t-Reordering</i> | infinity | | | | |
| <i>RLC-Config CHOICE</i> | Am | | | | |
| <i>ul-AM-RLC</i> | | | | | |
| > <i>sn-FieldLength</i> | size12 | | | | |
| > <i>t-PollRetransmit</i> | ms45 | | | | |
| > <i>pollPDU</i> | infinity | | | | |
| > <i>pollByte</i> | infinity | | | | |
| > <i>maxRetxThreshold</i> | t8 | | | | |
| <i>dl-AM-RLC</i> | | | | | |
| > <i>sn-FieldLength</i> | size12 | | | | |
| > <i>t-Reassembly</i> | ms35 | | | | |
| > <i>t-StatusProhibit</i> | ms0 | | | | |
| <i>logicalChannelIdentity</i> | 1 | 2 | 3 | | |
| <i>LogicalChannelConfig</i> | | | | | |
| > <i>priority</i> | 1 | 3 | 1 | | |
| > <i>prioritisedBitRate</i> | infinity | | | | |
| > <i>logicalChannelGroup</i> | 0 | | | | |

9.2.2 Default MAC Cell Group configuration

Parameters

| Name | Value | Semantics description | Ver |
|-----------------------------------|-------|-----------------------|-----|
| MAC Cell Group configuration | | | |
| <i>bsr-Config</i> | | | |
| > <i>periodicBSR-Timer</i> | sf10 | | |
| > <i>retxBSR-Timer</i> | sf80 | | |
| <i>phr-Config</i> | | | |
| > <i>phr-PeriodicTimer</i> | sf10 | | |
| > <i>phr-ProhibitTimer</i> | sf10 | | |
| > <i>phr-Tx-PowerFactorChange</i> | dB1 | | |

9.2.3 Default values timers and constants

Parameters

| Name | Value | Semantics description | Ver |
|------|---------|-----------------------|-----|
| t310 | ms1000 | | |
| n310 | n1 | | |
| t311 | ms30000 | | |
| n311 | n1 | | |

9.2.4 Default PC5 Relay RLC Channel

Parameters of the PC5 Relay RLC Channel used for Remote UE's SRB1 RRC message transmission and reception. The PC5 Relay RLC Channel using this configuration is named as SL-RLC1.

| Name | Value | Semantics description | Ver |
|-------------------------|-----------|--|-----|
| RLC configuration | | AM | |
| >sn-FieldLength | 12 | | |
| >t-Reassembly | Undefined | Selected by the receiving UE, up to UE implementation | |
| >t-PollRetransmit | Undefined | Selected by the transmitting UE, up to UE implementation | |
| >pollPDU | Undefined | Selected by the transmitting UE, up to UE implementation | |
| >pollByte | Undefined | Selected by the transmitting UE, up to UE implementation | |
| >maxRetxThreshold | Undefined | Selected by the transmitting UE, up to UE implementation | |
| >t-StatusProhibit | Undefined | Selected by the receiving UE, up to UE implementation | |
| >logicalChannelIdentity | 57 | | |
| MAC configuration | | | |
| >priority | 1 | | |
| >prioritisedBitRate | Infinity | | |
| >logicalChannelGroup | 0 | | |
| >schedulingRequestId | 0 | The scheduling request configuration with this value is applicable for this SCCH if configured by the network. | |

9.2.5 Default SRAP configurations

Parameters that are used for reception of Remote UE's *RRCResume*, *RRCRelease* in response to an *RRCResumeRequest*/*RRCResumeRequest1* and *RRCReestablishment* messages.

| Name | Value | Semantics description | Ver |
|--------------------------|-----------|--|-----|
| SL SRAP Config | | | |
| >sl-LocalIdentity | Undefined | SRAP PDUs with any local identity will be submitted to the SRB1 PDCP entity. | |
| >sl-RemoteUE-RB-Identity | SRB1 | | |

9.3 Sidelink pre-configured parameters

This ASN.1 segment is the start of the NR definitions of pre-configured sidelink parameters.

– *NR-Sidelink-Preconf*

-- ASN1STOP

```

| SL-PreconfigurationNR field descriptions |
|---|
| <i>sl-DRX-PreConfig-GC-BC</i>
This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3]. |
| <i>sl-OffsetDFN</i>
Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on. If the field is absent, no offset is applied. |
| <i>sl-PosPreconfigFreqInfoList, sl-PosPreconfigFreqInfoListExt</i>
This field indicates the NR sidelink positioning carrier frequencies of SL-PRS dedicated resource pool for SL-PRS transmission and reception. In this release, only one entry of <i>SL-FreqConfigCommon</i> is included in the list. If network includes <i>sl-PosPreconfigFreqInfoListExt</i> , it includes the same number of entries, and listed in the same order, as in <i>sl-PosPreconfigFreqInfoList</i> . The first entry in <i>sl-PosPreconfigFreqInfoListExt</i> corresponds to the <i>AdditionalSpectrumEmission</i> of the frequency of first entry in <i>sl-PosPreconfigFreqInfoList</i> . |
| <i>sl-PreconfigDiscConfig</i>
This field indicates the configuration for discovery message transmission used by NR sidelink U2N Remote UE, used by NR sidelink U2U Relay UE or used by NR sidelink U2U Remote UE. |
| <i>sl-PreconfigEUTRA-AnchorCarrierFreqList</i>
This field indicates the EUTRA anchor carrier frequency list, which can provide the NR sidelink communication configuration. |
| <i>sl-PreconfigFreqInfoList, sl-PreconfigFreqInfoListSizeExt, sl-PreconfigFreqInfoListExt</i>
This field indicates the NR sidelink communication and/ or NR sidelink discovery configuration some carrier frequency(ies). In this release, only one <i>SL-FreqConfig</i> can be configured in <i>sl-PreconfigFreqInfoList</i> . More entries of <i>SL-FreqConfig</i> can be configured in <i>sl-PreconfigFreqInfoListSizeExt</i> . If <i>sl-PreconfigFreqInfoListExt</i> is included, it contains the same number of entries, and listed in the same order, as in <i>sl-PreconfigFreqInfoList</i> together with <i>sl-PreconfigFreqInfoListSizeExt</i> . The first entry corresponds to the <i>AdditionalSpectrumEmission</i> of the frequency of first entry in <i>sl-PreconfigFreqInfoList</i> , the second entry corresponds to the <i>AdditionalSpectrumEmission</i> of the frequency of first entry in <i>sl-PreconfigFreqInfoListSizeExt</i> , the third entry corresponds to the <i>AdditionalSpectrumEmission</i> of the frequency of second entry in <i>sl-PreconfigFreqInfoListSizeExt</i> and so on. |
| <i>sl-PreconfigNR-AnchorCarrierFreqList</i>
This field indicates the NR anchor carrier frequency list, which can provide the NR sidelink communication configuration. |
| <i>sl-RadioBearerPreConfigList</i>
This field indicates one or multiple sidelink radio bearer configurations. |
| <i>sl-RLC-BearerPreConfigList, sl-RLC-BearerPreConfigListSizeExt</i>
This field indicates one or multiple sidelink RLC bearer configurations. |
| <i>sl-RoHC-Profiles</i>
This field indicates the supported RoHC profiles for NR sidelink communications. |
| <i>sl-SSB-PriorityNR</i>
This field indicates the priority of NR sidelink SSB transmission and reception. |
| <i>sl-SyncFreqList</i>
Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication. For <i>SL-Freq-Id-r16</i> , the value 1 corresponds to the frequency of first entry in <i>sl-PreconfigFreqInfoList</i> , the value 2 corresponds to the frequency of first entry in <i>sl-PreconfigFreqInfoListSizeExt</i> , the value 3 corresponds to the frequency of second entry in <i>sl-PreconfigFreqInfoListSizeExt</i> and so on. |
| <i>sl-SyncTxMultiFreq</i>
Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency. |
| <i>sl-TxProfileList</i>
List of one or multiple Tx profiles, indicating the compatibility of supporting SL DRX as specified in TS 38.321 [3]. Value <i>drx-Compatible</i> means SL DRX is supported, and value <i>drx-Incompatible</i> means SL DRX is not supported. It is up to the UE implementation whether/how to apply this field. |

| SL-PreconfigurationNR field descriptions | |
|--|--|
| sl-DRX-PreConfig-GC-BC | This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3]. |
| t400 | Indicates the value for timer T400 as described in clause 7.1. Value <i>ms100</i> corresponds to 100 ms, value <i>ms200</i> corresponds to 200 ms and so on. |
| t400-U2U | Indicates the value for timer T400 to be applied for end-to-end PC5 connection in sidelink U2U relay operation as described in clause 7.1. Value <i>ms200</i> corresponds to 200 ms, value <i>ms400</i> corresponds to 400 ms and so on. |

9.5 Void

10 Generic error handling

10.1 General

The generic error handling defined in the subsequent clauses applies unless explicitly specified otherwise e.g. within the procedure specific error handling.

The UE shall consider a value as not comprehended when it is set:

- to an extended value that is not defined in the version of the transfer syntax supported by the UE;
- to a spare or reserved value unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved value.

The UE shall consider a field as not comprehended when it is defined:

- as spare or reserved unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved field.

10.2 ASN.1 violation or encoding error

The UE shall:

- 1> when receiving an RRC message on the BCCH, CCCH, PCCH, MCCH, multicast MCCH or a PC5 RRC message on SBCCH for which the abstract syntax is invalid [6]:
- 2> ignore the message.

NOTE: This clause applies in case one or more fields is set to a value, other than a spare, reserved or extended value, not defined in this version of the transfer syntax. E.g. in the case the UE receives value 12 for a field defined as INTEGER (1..11). In cases like this, it may not be possible to reliably detect which field is in the error hence the error handling is at the message level.

10.3 Field set to a not comprehended value

The UE shall, when receiving an RRC message or PC5 RRC message on any logical channel:

- 1> if the message includes a field that has a value that the UE does not comprehend:
 - 2> if a default value is defined for this field:
 - 3> treat the message while using the default value defined for this field;
 - 2> else if the concerned field is optional:
 - 3> treat the message as if the field were absent and in accordance with the need code for absence of the concerned field;
 - 2> else:
 - 3> treat the message as if the field were absent and in accordance with clause 10.4.

10.4 Mandatory field missing

The UE shall:

- 1> if the message includes a field that is mandatory to include in the message (e.g. because conditions for mandatory presence are fulfilled) and that field is absent or treated as absent:

- 2> if the RRC message was not received on DCCH or CCCH; or
- 2> if the PC5 RRC message was not received on SCCH:
 - 3> if the field concerns a (sub-field of) an entry of a list (i.e. a SEQUENCE OF):
 - 4> treat the list as if the entry including the missing or not comprehended field was absent;
 - 3> else if the field concerns a sub-field of another field, referred to as the 'parent' field i.e. the field that is one nesting level up compared to the erroneous field:
 - 4> consider the 'parent' field to be set to a not comprehended value;
 - 4> apply the generic error handling to the subsequent 'parent' field(s), until reaching the top nesting level i.e. the message level;
 - 3> else (field at message level):
 - 4> ignore the message.

NOTE 1: The error handling defined in these clauses implies that the UE ignores a message with the message type or version set to a not comprehended value.

NOTE 2: The nested error handling for messages received on logical channels other than DCCH, CCCH and SCCH applies for errors in extensions also, even for errors that can be regarded as invalid network operation e.g. the network not observing conditional presence.

NOTE 3: UE behaviour on receipt of an RRC message on DCCH or CCCH or a PC5 RRC message on SCCH that does not include a field that is mandatory (e.g. because conditions for mandatory presence are fulfilled) is unspecified.

The following ASN.1 further clarifies the levels applicable in case of nested error handling for errors in extension fields.

```
-- /example/ ASN1START
-- Example with extension addition group

ItemInfoList ::=
    SEQUENCE (SIZE (1..max)) OF ItemInfo

ItemInfo ::=
    SEQUENCE {
        itemIdentity
            INTEGER (1..max),
        field1
            Field1,
        field2
            Field2 OPTIONAL,           -- Need N
        ...
        [[
            field3-r9
                Field3-r9 OPTIONAL,    -- Cond Cond1
            field4-r9
                Field4-r9 OPTIONAL     -- Need N
        ]]
    }

-- Example with traditional non-critical extension (empty sequence)

BroadcastInfoBlock1 ::=
    SEQUENCE {
        itemIdentity
            INTEGER (1..max),
        field1
            Field1,
        field2
            Field2 OPTIONAL,           -- Need N
        nonCriticalExtension
            BroadcastInfoBlock1-v940-IEs OPTIONAL
    }

BroadcastInfoBlock1-v940-IEs ::= SEQUENCE {
        field3-r9
            Field3-r9 OPTIONAL,        -- Cond Cond1
        field4-r9
            Field4-r9 OPTIONAL,        -- Need N
        nonCriticalExtension
            SEQUENCE {} OPTIONAL       -- Need S
    }

-- ASN1STOP
```

The UE shall, apply the following principles regarding the levels applicable in case of nested error handling:

- an extension addition group is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, a error regarding the conditionality of *field3* would result in the entire *itemInfo* entry to be ignored (rather than just the extension addition group containing *field3* and *field4*);
- a traditional *nonCriticalExtension* is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, an error regarding the conditionality of *field3* would result in the entire *BroadcastInfoBlock1* to be ignored (rather than just the non-critical extension containing *field3* and *field4*).

10.5 Not comprehended field

The UE shall, when receiving an RRC message on any logical channel:

- 1> if the message includes a field that the UE does not comprehend:
- 2> treat the rest of the message as if the field was absent.

NOTE: This clause does not apply to the case of an extension to the value range of a field. Such cases are addressed instead by the requirements in clause 10.3.

11 Radio information related interactions between network nodes

11.1 General

This clause specifies RRC messages that are transferred between network nodes. These RRC messages may be transferred to or from the UE via another Radio Access Technology. Consequently, these messages have similar characteristics as the RRC messages that are transferred across the NR radio interface, i.e. the same transfer syntax and protocol extension mechanisms apply.

11.2 Inter-node RRC messages

11.2.1 General

This clause specifies RRC messages that are sent either across the X2-, Xn- or the NG-interface, either to or from the gNB, i.e. a single 'logical channel' is used for all RRC messages transferred across network nodes. The information could originate from or be destined for another RAT.

11.2.2 Message definitions

– *CG-CandidateList*

This message is used to transfer the SCG radio configuration for one or more candidate cells for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) as generated by the candidate target SgNB, or the serving SgNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN.

Direction: Secondary gNB to master gNB or eNB.

***CG-CandidateList* message**

```

-- ASN1START

| CG-CandidateList field descriptions |
|---|
| cg-CandidateToAddModList
Contains information regarding candidate target cells to be added or modified for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN. |
| cg-CandidateToReleaseList
Contains information regarding candidate target cells for CPA, CPC, inter-SN subsequent CPAC, or CHO with candidate SCG(s) to be removed from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN. This list is not used in CPA, CPC, subsequent CPAC, or CHO with candidate SCG(s) preparation. |

| CG-CandidateInfo field descriptions |
|---|
| cg-CandidateInfoId
SSB frequency and Physical Cell Identity of the candidate target cell. |
| candidateCG-Config
CG-Config message corresponding to the cell indicated by cg-CandidateInfoId. |

– HandoverCommand

This message is used to transfer the handover command as generated by the target gNB.

Direction: target gNB to source gNB/source RAN.

HandoverCommand message

```
-- ASN1START
-- TAG-HANDOVER-COMMAND-START
```

```
HandoverCommand ::=
    criticalExtensions
        c1

}

-- TAG-HANDOVER-COMMAND-STOP
-- ASN1STOP
```

| HandoverCommand field descriptions |
|--|
| candPSCellExecCondReportConfigNR
Contains execution condition parameters of candidate PSCells in case of CHO with candidate SCG(s). This fields can include only <i>a4-Threshold</i> , <i>hysteresis</i> , <i>timeToTrigger</i> , and <i>rsType</i> associated to <i>condEventA4</i> . |
| handoverCommandMessage
Contains the <i>RRCReconfiguration</i> message used to perform handover within NR or handover to NR, as generated (entirely) by the target gNB. |

– HandoverPreparationInformation

This message is used to transfer the NR RRC information used by the target gNB during handover preparation or UE context retrieval, e.g. in case of resume or re-establishment, including UE capability information. This message is also used for transferring the information between the CU and DU.

Direction: source gNB/source RAN to target gNB or CU to DU.

| HandoverPreparationInformation field descriptions | |
|---|--|
| as-Context | Local RAN context required by the target gNB or DU. |
| rrm-Config | Local RAN context used mainly for RRM purposes. |
| sourceConfig | The radio resource configuration as used in the source cell. |
| ue-CapabilityRAT-List | The UE radio access related capabilities concerning RATs supported by the UE. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information. |
| ue-InactiveTime | Duration while UE has not received or transmitted any user data. Thus the timer is still running in case e.g., UE measures the neighbour cells for the HO purpose. Value <i>s1</i> corresponds to 1 second, <i>s2</i> corresponds to 2 seconds and so on. Value <i>min1</i> corresponds to 1 minute, value <i>min1s20</i> corresponds to 1 minute and 20 seconds, value <i>min1s40</i> corresponds to 1 minute and 40 seconds and so on. Value <i>hr1</i> corresponds to 1 hour, <i>hr1min30</i> corresponds to 1 hour and 30 minutes and so on. |

| AS-Config field descriptions | |
|--|---|
| <i>rrcReconfiguration</i> | Contains the <i>RRCReconfiguration</i> configuration as generated entirely by the MN. If the <i>TMGI-r17</i> is included in the <i>MRB-ToAddMod-r17</i> in the <i>RadioBearerConfig</i> , the <i>plmn-Index</i> is replaced by the PLMN ID, if needed. |
| <i>sdt-Config</i> | Contains the IE <i>SDT-Config</i> as generated entirely by the last serving gNB. This field is only used during the SDT procedure and the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively. |
| <i>sourceRB-SN-Config</i> | Contains the IE <i>RadioBearerConfig</i> as generated entirely by the SN. This field is only used when the UE is configured with SN terminated RB(s). |
| <i>sourceSCG-Configured</i> | Value <i>true</i> indicates that the UE is configured with NR or EUTRA SCG in source configuration. The field is only used in NR-DC and NE-DC and is included only if the fields <i>sourceSCG-NR-Config</i> and <i>sourceSCG-EUTRA-Config</i> are absent. |
| <i>sourceSCG-EUTRA-Config</i> | Contains the current dedicated SCG configuration in <i>RRCConnectionReconfiguration</i> message as specified in TS 36.331 [10] and generated entirely by the SN. In this version of the specification, the E-UTRA <i>RRCConnectionReconfiguration</i> message can only include the field <i>scg-Configuration</i> . This field is only used in NE-DC. |
| <i>sourceSCG-NR-Config</i> | Contains the current dedicated SCG configuration in <i>RRCReconfiguration</i> message as generated entirely by the SN. In this version of the specification, the <i>RRCReconfiguration</i> message can only include fields <i>secondaryCellGroup</i> , <i>measConfig</i> , and <i>conditionalReconfiguration</i> . This field is only used in NR-DC. |
| <i>srs-PosRRC-InactiveValidityAreaPreConfigList</i> | Contains the IE <i>SRS-PosRRC-InactiveValidityAreaPreConfigList</i> as generated entirely by the last serving gNB. This field is only used UE is preconfigured with SRS for positioning with validity area and during the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively. |

| AS-Context field descriptions |
|---|
| configRestrictInfoDAPS
Includes fields for which source cell explicitly indicates the restriction to be observed by target cell during DAPS handover. |
| mbsInterestIndication
Includes the information last reported by the UE in the NR <i>MBSInterestIndication</i> message, where the <i>plmn-Index</i> (if included by the UE in <i>tmgi</i>) is replaced by the PLMN ID, if needed. A TMGI for which the <i>plmn-Index</i> points to a non-serving SNPN is removed from the NR <i>MBSInterestIndication</i> message. |
| needForGapsInfoNR
Includes measurement gap requirement information of the UE for NR target bands. The field includes <i>needForGapsInfoNR</i> in <i>RRCReconfigurationComplete</i> message, <i>needForGapsInfoNR</i> in <i>RRCResumeComplete</i> message or <i>musim-needForGapsInfoNR</i> in <i>UEAssistanceInformation</i> message that is last reported by the UE, if any. |
| retainLoggedMeasurements
Indication to the target gNB that the UE shall retain logged measurements available in <i>VarCSI-LogMeasReport</i> at execution of the handover. If included, the target gNB is allowed to include the corresponding indication to the UE within the <i>HandoverCommand</i> message. |
| selectedBandCombinationSN
Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC. |
| sidelinkUEInformationEUTRA
This field includes <i>SidelinkUEInformation</i> IE as specified in TS 36.331 [10]. |
| sidelinkUEInformationNR
This field includes <i>SidelinkUEInformationNR</i> IE. |
| ue-ApplicabilityReportList
Includes information related to the applicability of prediction configurations and/or sets of parameters for prediction configurations that has been reported by the UE. |
| ueAssistanceInformation
Includes for each UE assistance feature the information last reported by the UE, if any. |
| ueAssistanceInformationSCG
Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the SCG, if any. |

| ConfigRestrictInfoDAPS field descriptions |
|---|
| sourceFeatureSetPerUplinkCC/sourceFeatureSetPerDownlinkCC
Indicates an index referring to the position of the <i>FeatureSetUplinkPerCC/FeatureSetDownlinkPerCC</i> selected by source in the <i>featureSetsUplinkPerCC/featureSetsDownlinkPerCC</i> . |

| RRM-Config field descriptions |
|---|
| candidateCellInfoList
A list of the best cells on each frequency for which measurement information was available |
| candidateCellInfoListSN-EUTRA
A list of EUTRA cells including serving cells and best neighbour cells on each serving frequency, for which measurement results were available. This field is only used in NE-DC. |

| Conditional Presence | Explanation |
|----------------------|---|
| HO | The field is mandatory present in case of handover within NR or UE context retrieval, e.g. in case of resume or re-establishment. The field is optionally present in case of handover from E-UTRA/5GC. Otherwise the field is absent. |
| HO2 | The field is optionally present in case of handover within NR; otherwise the field is absent. |

NOTE 1: The following table indicates per source RAT whether RAT capabilities are included or not.

| Source RAT | NR capabilities | E-UTRA capabilities | MR-DC capabilities | UTRA capabilities |
|------------|---|---------------------|--------------------|---|
| NR | May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise. | May be included | May be included | May be included, ignored by gNB if received |
| E-UTRAN | May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise. | May be included | May be included | May be included, ignored by gNB if received |

NOTE 2: The following table indicates, in case of inter-RAT handover from E-UTRA, which additional IEs are included or not:

| Source system | sourceConfig | rrm-Config | as-Context |
|---------------|---|-----------------|--------------|
| E-UTRA/EPC | Not included | May be included | Not included |
| E-UTRA/5GC | May be included, but only <i>radioBearerConfig</i> is included in the <i>RRCReconfiguration</i> . | May be included | Not included |

– CG-Config

This message is used to transfer the SCG radio configuration as generated by the SgNB or SeNB. It can also be used by a CU to request a DU to perform certain actions, e.g. to request the DU to perform a new lower layer configuration.

Direction: Secondary gNB or eNB to master gNB or eNB, alternatively CU to DU.

}

-- TAG-CG-CONFIG-STOP
-- ASN1STOP

```

| CG-Config field descriptions | |
|--|--|
| aggregatedBandwidthSN | Used to indicate or request the maximum aggregated bandwidth at the SN side if the <i>supportedAggBW-FR1</i> was reported for the <i>selectedBandCombination</i> or <i>requestedBC-MRDC</i> , respectively. This field is only used in NR-DC.
<ul style="list-style-type: none"> - <i>aggBW-FDD-DL/UL-r17</i> indicates the aggregated bandwidth across FDD DL/UL CCs in SCG; - <i>aggBW-TDD-DL/UL-r17</i> indicates the aggregated bandwidth across TDD DL/UL CCs in SCG; - <i>aggBW-TotalDL/UL-r17</i> indicates the aggregated bandwidth across all DL/UL CCs in SCG. |
| candidateCellInfoListCPC | Contains information regarding candidate target cells for Conditional PSCell Change (CPC) or inter-SN subsequent CPAC that the source secondary gNB suggests the target secondary gNB to consider configuring for CPC or subsequent CPAC, and/or that the source secondary gNB prepares for intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN. This field is only used in SN initiated CPC and SN initiated subsequent CPAC. |
| candidateCellInfoListSN | Contains information regarding cells that the source secondary node suggests the target secondary gNB to consider configuring. |
| candidateCellInfoListSN-EUTRA | Includes the <i>MeasResultList3EUTRA</i> as specified in TS 36.331 [10]. Contains information regarding cells that the source secondary node suggests the target secondary eNB to consider configuring. This field is only used in NE-DC. |
| candidateCellInfoListSubsequentCPC | Contains information regarding candidate target cells for subsequent CPAC that candidate secondary gNB (or the serving secondary gNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN) suggests the master gNB to consider configuring for subsequent CPAC. This field is only used in MN initiated and SN initiated subsequent CPAC. This field is only included in a <i>CG-Config</i> message which is contained within a <i>CG-CandidateList</i> message. |
| candidateServingFreqListNR, candidateServingFreqListEUTRA | Indicates frequencies of candidate serving cells for In-Device Co-existence Indication (see TS 36.331 [10]). |
| candidateServingFreqListNR-r18 | Indicates the candidate frequencies configured by SN for IDC. This field is only used in NR-DC. |
| candidateServingFreqRangeListNR | Indicates the candidate frequency ranges configured by SN for IDC. This field is only used in NR-DC. |
| configRestrictModReq | Used by SN to request changes to SCG configuration restrictions previously set by MN to ensure UE capabilities are respected and to indicate the configured/reserved SCG resources. E.g. can be used to request configuring an NR band combination whose use MN has previously forbidden. SN only includes this field in SN-initiated procedures unless this field is used to indicate configured/reserved SCG resources (corresponding to <i>reservedResourceConfigNRDC</i> and/or <i>aggregatedBandwidthSN</i>) only. |
| drx-ConfigSCG | This field contains the complete DRX configuration of the SCG. This field is only used in NR-DC. |
| drx-InfoSCG | This field contains the DRX long and short cycle configuration of the SCG. This field is used in (NG)EN-DC and NE-DC. |
| drx-InfoSCG2 | This field contains the drx-onDurationTimer configuration of the SCG. This field is only used in (NG)EN-DC. |
| fr-InfoListSCG | Contains information of FR information of serving cells that include PSCell and SCells configured in SCG. |
| fr1-Carriers-SCG, fr2-Carriers-SCG | Indicates the number of FR1 or FR2 serving cells configured in SCG. |
| idc-TDM-AssistanceConfig | Indicates if the IDC TDM reporting is enabled for the UE by SN. This field is only used in NR-DC. |

| |
|--|
| <i>ltm-Config</i> |
| The field contains the LTM candidate configuration(s) to be used at the SCG. This field is only used in NR-DC. |
| <i>ltm-ReferenceConfigurationSCG</i> |
| The field contains the LTM reference configuration to be used at the SCG. This field is only used in NR-DC. |
| <i>measuredFrequenciesSN</i> |
| Used by SN to indicate a list of frequencies measured by the UE. |
| <i>needForGaps</i> |
| In NE-DC, indicates whether the SN requests gNB to configure measurements gaps. |
| <i>ph-InfoSCG</i> |
| Power headroom information in SCG that is needed in the reception of PHR MAC CE of MCG |
| <i>ph-SupplementaryUplink</i> |
| Power headroom information for supplementary uplink. In the case of (NG)EN-DC and NR-DC, this field is only present when two UL carriers are configured for a serving cell and one UL carrier reports type1 PH while the other reports type 3 PH. |
| <i>ph-Type1or3</i> |
| Type of power headroom for a certain serving cell in SCG (PSCell and activated SCells). Value <i>type1</i> refers to type 1 power headroom, value <i>type3</i> refers to type 3 power headroom. (See TS 38.321 [3]). |
| <i>ph-Uplink</i> |
| Power headroom information for uplink. |
| <i>pSCellFrequency, pSCellFrequencyEUTRA</i> |
| Indicates the frequency of PSCell in NR (i.e., <i>pSCellFrequency</i>) or E-UTRA (i.e., <i>pSCellFrequencyEUTRA</i>). In this version of the specification, <i>pSCellFrequency</i> is not used in NE-DC whereas <i>pSCellFrequencyEUTRA</i> is only used in NE-DC. <i>pSCellFrequency</i> indicates the <i>absoluteFrequencySSB</i> . |
| <i>reportCGI-RequestNR, reportCGI-RequestEUTRA</i> |
| Used by SN to indicate to MN about configuring <i>reportCGI</i> procedure. The request may optionally contain information about the cell for which SN intends to configure <i>reportCGI</i> procedure. In this version of the specification, the <i>reportCGI-RequestNR</i> is used in (NG)EN-DC and NR-DC whereas <i>reportCGI-RequestEUTRA</i> is used only for NE-DC. |
| <i>requestedBC-MRDC</i> |
| Used to request configuring a band combination and corresponding feature sets which are forbidden to use by MN (i.e. outside of the <i>allowedBC-ListMRDC</i>) to allow re-negotiation of the UE capabilities for SCG configuration. |
| <i>requestedInterSN-LTM</i> |
| Used to request to configure inter-SN LTM candidate configuration(s) at the SCG. This field is only used in NR-DC. |
| <i>requestedL1-MeasConfigNRDC</i> |
| Used to request the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC. |
| <i>requestedLTM-ResourceConfigNRDC</i> |
| Used to request the maximum number of allowed resources for configuring LTM at the SCG. This field is only used in NR-DC. |
| <i>requestedMaxInterFreqMeasIdSCG</i> |
| Used to request the maximum number of allowed measurement identities to configure for inter-frequency measurement. This field is only used in NR-DC. |
| <i>requestedMaxIntraFreqMeasIdSCG</i> |
| Used to request the maximum number of allowed measurement identities to configure for intra-frequency measurement on each serving frequency. |
| <i>requestedMaxLTM-CandidateIdSCG</i> |
| Used to request the maximum number of allowed LTM candidate configurations to configure. This field is only used in NR-DC. |
| <i>requestedPDCCH-BlindDetectionSCG</i> |
| Requested value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG. |

| |
|--|
| requestedP-MaxEUTRA |
| Requested value for the maximum power for the serving cells the UE can use in E-UTRA SCG. This field is only used in NE-DC. |
| requestedP-MaxFR1 |
| Requested value for the maximum power for the serving cells on frequency range 1 (FR1) in this secondary cell group (see TS 38.104 [12]) the UE can use in NR SCG. |
| requestedP-MaxFR2 |
| Requested value for the maximum power for the serving cells on frequency range 2 (FR2) in this secondary cell group the UE can use in NR SCG. This field is only used in NR-DC. |
| requestedToffset |
| Requests the new value for the time offset restriction used by the SN for scheduling SCG transmissions (i.e. $T_{proc,SCG}^{max}$, see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. Value ms0dot5 corresponds to 0.5 ms, value ms0dot75 corresponds to 0.75 ms, value ms1 corresponds to 1ms and so on. |
| reservedResourceConfigNRDC |
| Used to request or indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC. |
| scellFrequenciesSN-EUTRA, scellFrequenciesSN-NR |
| Indicates the frequency of all SCells with SSB configured in SCG. The field <i>scellFrequenciesSN-EUTRA</i> is used in NE-DC; the field <i>scellFrequenciesSN-NR</i> is used in (NG)EN-DC and NR-DC. In (NG)EN-DC, the field is optionally provided to the MN. <i>scellFrequenciesSN-NR</i> indicates <i>absoluteFrequencySSB</i> . |
| scg-CellGroupConfig |
| Contains the <i>RRCReconfiguration</i> message (containing only <i>secondaryCellGroup</i> and/or <i>measConfig</i> and/or <i>otherConfig</i> and/or <i>appLayerMeasConfig</i> and/or <i>conditionalReconfiguration</i> , <i>ltm-Config</i> , and/or <i>bap-Config</i> and/or <i>iab-IP-AddressConfigurationList</i>): |
| <ul style="list-style-type: none"> - to be sent to the UE, used upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SgNB. In this case, the SN sets the <i>RRCReconfiguration</i> message in accordance with clause 6 e.g. regarding the "Need" or "Cond" statements. |
| or |
| <ul style="list-style-type: none"> - including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signaling by the target SN, or in SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]). In this case, the SN sets the <i>RRCReconfiguration</i> message in accordance with clause 11.2.3. |
| The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]) nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is not applicable in NE-DC. |
| scg-CellGroupConfigEUTRA |
| Includes the E-UTRA <i>RRCConnectionReconfiguration</i> message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field <i>scg-Configuration</i> : |
| <ul style="list-style-type: none"> - to be sent to the UE, used to (re-)configure the SCG configuration upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SeNB. In this case, the SN sets the <i>scg-Configuration</i> within the EUTRA <i>RRCConnectionReconfiguration</i> message in accordance with clause 6 in TS 36.331 [10] e.g. regarding the "Need" or "Cond" statements. |
| or |
| <ul style="list-style-type: none"> - including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signalling by the target SN. |
| The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is only used in NE-DC. |

| |
|--|
| <p>scg-RB-Config
Contains the IE <i>RadioBearerConfig</i>:</p> <ul style="list-style-type: none"> - to be sent to the UE, used to (re-)configure the SCG RB configuration upon SCG establishment or modification, as generated (entirely) by the (target) SgNB or SeNB. In this case, the SN sets the <i>RadioBearerConfig</i> in accordance with clause 6, e.g. regarding the "Need" or "Cond" statements. or - including the current SCG RB configuration of the UE, when provided in response to a query from MN or in SN triggered SN change or in SN triggered SN release or bearer type change between SN terminated bearer to MN terminated bearer in order to enable delta signaling by the MN or target SN. In this case, the SN sets the <i>RadioBearerConfig</i> in accordance with clause 11.2.3. <p>The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change nor SN triggered SN release is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG RB (re)configuration.</p> |
| <p>scpac-ReferenceConfigurationSCG
Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC.</p> |
| <p>selectedBandCombination
Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC. The SN should inform the MN with this field whenever the band combination and/or feature set it selected for the SCG changes (i.e. even if the new selection concerns a band combination and/or feature set that is allowed by the <i>allowedBC-ListMRDC</i>)</p> |
| <p>selectedToffset
Indicates the value used by the SN for scheduling SCG transmissions (i.e. $T_{proc,SCG}^{max}$, see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. The SN can only indicate a value that is less than or equal to <i>maxToffset</i> received from MN. This field is used in NR-DC only when MN has included the field <i>maxToffset</i> in <i>CG-ConfigInfo</i>. Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms0dot75</i> corresponds to 0.75 ms, value <i>ms1</i> corresponds to 1ms and so on.</p> |
| <p>servCellInfoListSCG-EUTRA
Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the SCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC.</p> |
| <p>servCellInfoListSCG-NR
Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the SCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC.</p> |
| <p>subsequentCPAC-Information
Contains information about handling of stored subsequent CPAC configurations for the UE that the target secondary gNB suggests the master gNB to consider configuring for normal PSCell addition or change. It includes information about updates of execution conditions for the subsequent CPAC configurations that are to be kept at the PSCell addition/change.</p> |
| <p>successPSCell-Config
Include the successful PSCell change or addition report configuration in case of SN initiated PSCell change or CPC. The <i>thresholdPercentageT304-SCG</i> is not configured in this message.</p> |
| <p>twoPHRModeSCG
Indicates if the power headroom for SCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not.</p> |
| <p>twoSRS-MultipanelScheme
Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of multipanelSchemeSDM or multipanelSchemeSFN corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'.</p> |

| |
|---|
| twoSRS-PUSCH-Repetition
Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'. |
| transmissionBandwidth-EUTRA
Indicates the transmission bandwidth on an E-UTRA carrier frequency as defined by the parameter Transmission Bandwidth Configuration "NRB" TS 36.104 [33]. The values rb6, rb15, rb25, rb50, rb75, rb100 indicate 6, 15, 25, 50, 75 and 100 resource blocks respectively. |
| ueAssistanceInformationSCG
Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the SCG, if any. |

| <i>BandCombinationInfoSN</i> field descriptions |
|---|
| bandCombinationIndex
In case of NR-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> . In case of NE-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationListNEDC-Only</i> . In case of (NG)EN-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationList-UplinkTxSwitch</i> . Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i> . Band combination entries in <i>supportedBandCombinationListNEDC-Only</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationListNEDC-Only</i> increased by the number of entries in <i>supportedBandCombinationList</i> . Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i> . |
| requestedFeatureSets
The position in the <i>FeatureSetCombination</i> which identifies one <i>FeatureSetUplink/Downlink</i> for each band entry in the associated band combination |

| Conditional Presence | Explanation |
|----------------------|---|
| <i>FDD</i> | This field is mandatory present if dl-FreqInfo-NR is included and concerns an FDD carrier; otherwise the field is absent. |

— CG-ConfigInfo

This message is used by master eNB or gNB to request the SgNB or SeNB to perform certain actions e.g. to establish, modify or release an SCG. The message may include additional information e.g. to assist the SgNB or SeNB to set the SCG configuration. It can also be used by a CU to request a DU to perform certain actions, e.g. to establish, or modify an MCG or SCG.

Direction: Master eNB or gNB to secondary gNB or eNB, alternatively CU to DU.

| CG-ConfigInfo field descriptions |
|---|
| <i>affectedCarrierFreqCombList</i>
This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination. |
| <i>affectedCarrierFreqRangeCombList</i>
This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency range combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination. |
| <i>alignedDRX-Indication</i>
This field is signalled upon MN triggered CGI reporting by the UE that requires aligned DRX configurations between the MCG and the SCG (i.e. same DRX cycle and on-duration configured by MN completely contains on-duration configured by SN). |
| <i>allowedAggregatedBandwidthSNList</i>
A list of allowed maximum aggregated bandwidth at the SN side for the band combination included in the <i>allowedBC-ListMRDC</i> . This field is only used in NR-DC. |
| <i>allowedBC-ListMRDC</i>
A list of indices referring to band combinations in MR-DC capabilities from which SN is allowed to select the SCG band combination. Each entry refers to:
- a band combination numbered according to <i>supportedBandCombinationList</i> and <i>supportedBandCombinationList-UplinkTxSwitch</i> in the <i>UE-MRDC-Capability</i> (in case of (NG)EN-DC), or according to <i>supportedBandCombinationList</i> and <i>supportedBandCombinationListNEDC-Only</i> in the <i>UE-MRDC-Capability</i> (in case of NE-DC), or according to <i>supportedBandCombinationList</i> in the <i>UE-NR-Capability</i> (in case of NR-DC),
- and the Feature Sets allowed for each band entry. All MR-DC band combinations indicated by this field comprise the MCG band combination, which is a superset of the MCG band(s) selected by MN. |
| <i>allowedInterSN-LTM</i>
Used to indicate whether the SCG can configure inter-SN LTM candidate configuration. If the field is absent the SN is not allowed to configure inter-SN LTM candidate configurations. This field is only used in NR-DC. |
| <i>allowedL1-MeasConfigNRDC</i>
Used to indicate the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC. |
| <i>allowedLTM-ResourceConfigNRDC</i>
Used to indicate the maximum number of allowed resources for configuring LTM at the SCG. This field is only used in NR-DC. |
| <i>allowedReducedConfigForOverheating</i>
Indicates the reduced configuration that the SCG is allowed to configure.
<i>reducedMaxCCs</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum number of downlink/uplink PSCell/SCells that the SCG is allowed to configure. This field is used in (NG)EN-DC and NR-DC.
<i>reducedMaxBW-FR1</i> and <i>reducedMaxBW-FR2</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR1 and FR2-1, respectively that the SCG is allowed to configure. <i>reducedMaxBW-FR2-2</i> in <i>allowedReducedConfigForOverheating-r17</i> indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC.
<i>reducedMaxMIMO-LayersFR1</i> and <i>reducedMaxMIMO-LayersFR2</i> in <i>allowedReducedConfigForOverheating</i> indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR1 and FR2-1, respectively that the SCG is allowed to configure. <i>reducedMaxMIMO-LayersFR2-2</i> in <i>allowedReducedConfigForOverheating-r17</i> indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC. |
| <i>allowedResourceConfigNRDC</i>
Used to indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC. |

| |
|--|
| <i>candidateCellInfoListMN, candidateCellInfoListSN</i> |
| Contains information regarding cells that the master node or the source node suggests the target gNB or DU to consider configuring. In case of MN initiated CPA, CPC or CHO with candidate SCG(s), the field <i>candidateCellInfoListMN</i> contains information regarding cells that the MN suggests the candidate target secondary node to consider configuring for MN initiated CPA, CPC, CHO with candidate SCG(s), or subsequent CPAC.
For (NG)EN-DC, including CSI-RS measurement results in <i>candidateCellInfoListMN</i> is not supported in this version of the specification. For NR-DC, including SSB and/or CSI-RS measurement results in <i>candidateCellInfoListMN</i> is supported. |
| <i>candidateCellInfoListMN-EUTRA, candidateCellInfoListSN-EUTRA</i> |
| Includes the <i>MeasResultList3EUTRA</i> as specified in TS 36.331 [10]. Contains information regarding cells that the master node or the source node suggests the target secondary eNB to consider configuring. These fields are only used in NE-DC. |
| <i>candidateCellListCPC</i> |
| Contains information regarding cells that the source secondary node suggests the candidate target secondary node to consider configuring for SN initiated Conditional PSCell Change (CPC) or SN initiated inter-SN subsequent CPAC. |
| <i>configRestrictInfo</i> |
| Includes fields for which SgNB is explicitly indicated to observe a configuration restriction. |
| <i>drx-ConfigMCG</i> |
| This field contains the complete DRX configuration of the MCG. This field is only used in NR-DC. |
| <i>drx-InfoMCG</i> |
| This field contains the DRX long and short cycle configuration of the MCG. This field is used in (NG)EN-DC and NE-DC. |
| <i>drx-InfoMCG2</i> |
| This field contains the <i>drx-onDurationTimer</i> configuration of the MCG. This field is only used in (NG)EN-DC. |
| <i>dummy, dummy1</i> |
| These fields are not used in the specification and SN ignores the received value(s). |
| <i>fr-InfoListMCG</i> |
| Contains information of FR information of serving cells that include PCell and SCell(s) configured in MCG. |
| <i>fr1-Carriers-MCG, fr2-Carriers-MCG</i> |
| Indicates the number of FR1 or FR2 serving cells configured in MCG. |
| <i>hsdn-Cell</i> |
| Used by MN to provide SN with <i>hsdn-Cell</i> for the cell reported in <i>measResultReportCGI-EUTRA</i> as per SN's request. In this version of the specification, this field is used only for NE-DC. |
| <i>idc-TDM-Assistance</i> |
| This field is signalled upon MN not addressing IDC issue and contains IDC TDM assistance information reported by UE to MN for IDC problem. |
| <i>interFreqNoGap</i> |
| Indicates that the field <i>interFrequencyConfig-NoGap-r16</i> has been included within the <i>MeasConfig</i> IE generated by the MN. |
| <i>lowMobilityEvaluationConnectedInPCell</i> |
| Indicates if low mobility criterion has been configured in NR PCell. |
| <i>ltm-ReferenceConfigurationMCG</i> |
| The field contains the LTM reference configuration to be used at the SCG. This field is only used in NR-DC. |
| <i>maxInterFreqMeasIdentitiesSCG</i> |
| Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for inter-frequency measurement. The maximum value for this field is 10. If the field is absent, the SCG is allowed to configure inter-frequency measurements up to the maximum value. This field is only used in NR-DC. |

| |
|---|
| <i>maxIntraFreqMeasIdentitiesSCG</i> |
| Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for intra-frequency measurement on each serving frequency. The maximum value for this field is 9 (in case of (NG)EN-DC or NR-DC) or 10 (in case of NE-DC). If the field is absent, the SCG is allowed to configure intra-frequency measurements up to the maximum value on each serving frequency. |
| <i>maxMeasCLI-ResourceSCG</i> |
| Indicates the maximum number of CLI RSSI resources that the SCG is allowed to configure. |
| <i>maxMeasFreqsSCG</i> |
| Indicates the maximum number of NR inter-frequency carriers the SN is allowed to configure with PSCell for measurements. |
| <i>maxMeasSRS-ResourceSCG</i> |
| Indicates the maximum number of SRS resources that the SCG is allowed to configure for CLI measurement. |
| <i>maxNumberCPCCandidates</i> |
| Indicates the maximum numbers of conditional reconfigurations the SN is allowed to configure for SN initiated CPC. Value 0 indicates that the SN is not allowed to configure SN initiated CPC. If the field is absent, the SN is allowed to configure up to <i>maxNrofCondCells-r16</i> conditional reconfigurations for SN-initiated CPC. |
| <i>maxNumberEHC-ContextsSN</i> |
| Indicates the maximum number of EHC contexts allowed to the SN terminated bearer. The field indicates the number of contexts in addition to CID = "all zeros", as specified in TS 38.323 [5]. |
| <i>maxNumberLTM-CandidatesSCG</i> |
| Indicates the maximum number of LTM candidate configurations that the SN is allowed to configure. If the field is absent the SN is not allowed to configure LTM candidate configurations. This field is only used in NR-DC. |
| <i>maxNumberROHC-ContextSessionsSN</i> |
| Indicates the maximum number of ROHC context sessions allowed to SN terminated bearer, excluding context sessions that leave all headers uncompressed. |
| <i>maxNumberUDC-DRB</i> |
| Indicates the maximum number of UDC DRBs allowed to SN terminated bearer. This field is used in NGEN-DC, NR-DC and NE-DC. |
| <i>maxToffset</i> |
| Indicates the maximum Toffset value the SN is allowed to use for scheduling SCG transmissions (see TS 38.213 [13]). This field is used in NR-DC only when the fields <i>nrdc-PC-mode-FR1-r16</i> or <i>nrdc-PC-mode-FR2-r16</i> are set to dynamic. Value <i>ms0dot5</i> corresponds to 0.5 ms, value <i>ms0dot75</i> corresponds to 0.75 ms, value <i>ms1</i> corresponds to 1 ms and so on. |
| <i>measuredFrequenciesMN</i> |
| Used by MN to indicate a list of frequencies measured by the UE. |
| <i>measGapConfig</i> |
| Indicates the FR1 and perUE measurement gap configuration configured by MN. |
| <i>measGapConfigFR2</i> |
| Indicates the FR2 measurement gap configuration configured by MN. |
| <i>mcg-RB-Config</i> |
| Contains all of the fields in the IE <i>RadioBearerConfig</i> used in MN, used by the SN to support delta configuration to UE (i.e. when MN does not use full configuration option), for bearer type change between MN terminated bearer with NR PDCP to SN terminated bearer. It is also used to indicate the PDCP duplication related information for MN terminated split bearer (whether duplication is configured and if so, whether it is initially activated) in SN Addition/Modification procedure. Otherwise, this field is absent. |
| <i>measResultReportCGI, measResultReportCGI-EUTRA</i> |
| Used by MN to provide SN with CGI-Info for the cell as per SN's request. In this version of the specification, the <i>measResultReportCGI</i> is used for (NG)EN-DC and NR-DC and the <i>measResultReportCGI-EUTRA</i> is used only for NE-DC. |
| <i>measResultSCG-EUTRA</i> |
| This field includes the <i>MeasResultSCG-FailureMRDC</i> IE as specified in TS 36.331 [10]. This field is only used in NE-DC. |

| |
|---|
| measResultSFTD-EUTRA |
| SFTD measurement results between the PCell and the E-UTRA PScell in NE-DC. This field is only used in NE-DC. |
| mrdc-AssistanceInfo |
| Contains the IDC assistance information for MR-DC reported by the UE (see TS 36.331 [10]). |
| musim-CapRestrictionInfo |
| Indicates the UE's preference on SCell(s) or PScell to be released, serving cell(s) with restricted capability, band(s) or combination(s) of bands with restricted capability, or band(s) or band combination(s) to be avoided for UE temporary capabilities restriction purpose with the <i>musim-candidateBandList-r18</i> only for <i>musim-AffectedBandsList-r18</i> and <i>musim-AvoidedBandsList-r18</i> . All fields in <i>musim-CapRestriction-r18</i> can be sent from MN to SN, i.e., it is up to MN implementation to decide which field(s) need to be sent. |
| musim-GapConfigInfo |
| Indicates the MUSIM gap configuration configured by MN. |
| nrdc-PC-mode-FR1 |
| Indicates the uplink power sharing mode that the UE uses in NR-DC FR1 (see TS 38.213 [13], clause 7.6). |
| nrdc-PC-mode-FR2 |
| Indicates the uplink power sharing mode that the UE uses in NR-DC FR2 (see TS 38.213 [13], clause 7.6). |
| overheatingAssistanceSCG |
| Contains the UE's preference on reduced configuration for NR SCG to address overheating. This field is only used in (NG)EN-DC. |
| overheatingAssistanceSCG-FR2-2 |
| Contains the UE's preference on reduced configuration for NR SCG on FR2-2 to address overheating. This field is only used in (NG)EN-DC. |
| p-maxEUTRA |
| Indicates the maximum total transmit power to be used by the UE in the E-UTRA cell group (see TS 36.104 [33]). This field is used in (NG)EN-DC and NE-DC. |
| p-maxNR-FR1 |
| For (NG)EN-DC and NE-DC, the field indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]). For NR-DC, it indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR SCG. |
| p-maxUE-FR1 |
| Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 1 (FR1). |
| p-maxNR-FR1-MCG |
| Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR MCG. This field is only used in NR-DC. |
| p-maxNR-FR2-SCG |
| Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR SCG. |
| p-maxUE-FR2 |
| Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 2 (FR2). |
| p-maxNR-FR2-MCG |
| Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR MCG. |
| pdcch-BlindDetectionSCG |
| Indicates the maximum value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG. |
| ph-InfoMCG |
| Power headroom information in MCG that is needed in the reception of PHR MAC CE in SCG. |

| |
|---|
| ph-SupplementaryUplink
Power headroom information for supplementary uplink. For UE in (NG)EN-DC, this field is absent. |
| ph-Type1or3
Type of power headroom for a serving cell in MCG (PCell and activated SCells). <i>type1</i> refers to type 1 power headroom, <i>type3</i> refers to type 3 power headroom. (See TS 38.321 [3]). |
| ph-Uplink
Power headroom information for uplink. |
| powerCoordination-FR1
Indicates the maximum power that the UE can use in FR1. |
| powerCoordination-FR2
Indicates the maximum power that the UE can use in frequency range 2 (FR2). This field is only used in NR-DC. |
| scgFailureInfo
Contains SCG failure type and measurement results. In case the sender has no measurement results available, the sender may include one empty entry (i.e. without any optional fields present) in <i>measResultPerMOList</i> . This field is used in (NG)EN-DC and NR-DC. |
| scg-RB-Config
Contains all of the fields in the IE RadioBearerConfig used in SN, used to allow the target SN to use delta configuration to the UE, e.g. during SN change. The field is signalled upon change of SN unless MN uses full configuration option. Otherwise, the field is absent. |
| scpac-ReferenceConfiguration
Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC. |
| selectedBandEntriesMNList
A list of indices referring to the position of a band entry selected by the MN, in each band combination entry in <i>allowedBC-ListMRDC</i> IE. <i>BandEntryIndex</i> 0 identifies the first band in the <i>bandList</i> of the <i>BandCombination</i> , <i>BandEntryIndex</i> 1 identifies the second band in the <i>bandList</i> of the <i>BandCombination</i> , and so on. This <i>selectedBandEntriesMNList</i> includes the same number of entries, and listed in the same order as in <i>allowedBC-ListMRDC</i> . The SN uses this information to determine which bands out of the NR band combinations in <i>allowedBC-ListMRDC</i> it can configure in SCG in NR-DC. The SN can use this information to determine for which band pair(s) it should check <i>SimultaneousRxTxPerBandPair</i> . |
| servCellIndexRangeSCG
Range of serving cell indices that SN is allowed to configure for SCG serving cells. |
| servCellInfoListMCG-EUTRA
Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the MCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC. |
| servCellInfoListMCG-NR
Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the MCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC. |
| servFrequenciesMN-NR
Indicates the frequency of all serving cells that include PCell and SCell(s) with SSB configured in MCG. This field is only used in NR-DC. <i>servFrequenciesMN-NR</i> indicates <i>absoluteFrequencySSB</i> . |
| sftdFrequencyList-NR
Includes a list of SSB frequencies. Each entry identifies the SSB frequency of a PSCell, which corresponds to one <i>MeasResultCellSFTD-NR</i> entry in the <i>MeasResultCellListSFTD-NR</i> . |

| |
|---|
| sftdFrequencyList-EUTRA |
| Includes a list of E-UTRA frequencies. Each entry identifies the carrier frequency of a PSCell, which corresponds to one <i>MeasResultSFTD-EUTRA</i> entry in the <i>MeasResultCellListSFTD-EUTRA</i> . |
| sidelinkUEInformationEUTRA |
| This field contains the E-UTRA <i>SidelinkUEInformation</i> message as specified in TS 36.331 [10]. |
| sidelinkUEInformationNR |
| This field contains the NR <i>SidelinkUEInformationNR</i> message. |
| sourceConfigSCG |
| Includes all of the current SCG configurations used by the target SN to build delta configuration to be sent to UE, e.g. during SN change. The field contains the <i>RRCReconfiguration</i> message which may include <i>secondaryCellGroup</i> , <i>measConfig</i> , and <i>conditionalReconfiguration</i> . The field is signalled upon change of SN, unless MN uses full configuration option. Otherwise, the field is absent. |
| sourceConfigSCG-EUTRA |
| Includes the E-UTRA <i>RRCConnectionReconfiguration</i> message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field <i>scg-Configuration</i> . In this version of the specification, this field is absent when master gNB uses full configuration option. This field is only used in NE-DC. |
| subsequentCPAC-Candidates |
| Includes the subsequent CPAC candidate PSCells that the UE has stored in MCG <i>VarConditionalReconfig</i> . |
| twoPHRModeMCG |
| Indicates if the power headroom for MCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not. |
| twoSRS-PUSCH-Repetition |
| Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'. |
| twoSRS-MultipanelScheme |
| Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of <i>multipanelSchemeSDM</i> or <i>multipanelSchemeSFN</i> corresponding to two SRS resource sets configured in either <i>srs-ResourceSetToAddModList</i> or <i>srs-ResourceSetToAddModListDCI-0-2</i> with usage 'codebook' or 'noncodebook'. |
| ueAssistanceInformationSourceSCG |
| Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR <i>UEAssistanceInformation</i> message for the source SCG, if any. |
| ue-CapabilityInfo |
| Contains the IE <i>UE-CapabilityRAT-ContainerList</i> supported by the UE (see NOTE 3). A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information. |

| <i>BandCombinationInfo</i> field descriptions |
|---|
| <p><i>allowedFeatureSetsList</i>
 Defines a subset of the entries in a <i>FeatureSetCombination</i>. Each index identifies a position in the <i>FeatureSetCombination</i>, which corresponds to one <i>FeatureSetUplink/Downlink</i> for each band entry in the associated band combination.</p> <p><i>bandCombinationIndex</i>
 In case of NR-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i>. In case of NE-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationListNEDC-Only</i>. In case of (NG)EN-DC, this field indicates the position of a band combination in the <i>supportedBandCombinationList</i> and/or <i>supportedBandCombinationList-UplinkTxSwitch</i>. Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationListNEDC-Only</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationListNEDC-Only</i> increased by the number of entries in <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i>.</p> |

| <i>AllowedAggregatedBandwidth</i> field descriptions |
|---|
| <p><i>AllowedAggregatedBandwidth</i>
 Indicates the allowed maximum aggregated bandwidth at the SN side.</p> <ul style="list-style-type: none"> - <i>allowedAggBW-FDD-DL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across FDD DL/UL CCs in SCG; - <i>allowedAggBW-TDD-DL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across TDD DL/UL CCs in SCG; - <i>allowedAggBW-TotalDL/UL-r17</i> indicates the allowed maximum aggregated bandwidth across all DL/UL CCs in SCG. <p><i>bandCombinationIndex</i>
 This field indicates the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList</i>. Band combination entries in <i>supportedBandCombinationList-UplinkTxSwitch</i> are referred by an index which corresponds to the position of a band combination in the <i>supportedBandCombinationList-UplinkTxSwitch</i> increased by the number of entries in <i>supportedBandCombinationList</i>.</p> |

| Conditional Presence | Explanation |
|-----------------------------|---|
| <i>SN-AddMod</i> | The field is mandatory present upon SN addition and SN change. It is optionally present upon SN modification and inter-MN handover without SN change. Otherwise, the field is absent. |

NOTE 3: The following table indicates per MN RAT and SN RAT whether RAT capabilities are included or not in *ue-CapabilityInfo*.

| MN RAT | SN RAT | NR capabilities | E-UTRA capabilities | MR-DC capabilities |
|--------|--------|--|--|--|
| E-UTRA | NR | Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise | Not included | Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise |
| NR | E-UTRA | Not included | Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise | Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise |
| NR | NR | Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise | Not included | Not included |

– *MeasurementTimingConfiguration*

The *MeasurementTimingConfiguration* message is used to convey assistance information for measurement timing and to indicate which neighbour cell SSB is CD-SSB. The other indicated SSB can be considered as the NCD-SSB in use.

Direction: en-gNB to eNB, eNB to en-gNB, gNB to gNB, ng-eNB to gNB, gNB to ng-eNB, ng-eNB to ng-eNB, gNB DU to gNB CU, and gNB CU to gNB DU.

| MeasTiming field descriptions |
|---|
| carrierFreq, ssbSubcarrierSpacing
Indicates the frequency and subcarrier spacing of the SS block of the cell for which this message is included, or of other SS blocks within the same carrier. |
| ssb-MeasurementTimingConfiguration
Indicates the SMTC which can be used to search for SSB of the cell for which the message is included. When the message is included in "Served NR Cell Information" (see TS 36.423 [37]), "Served Cell Information NR" (see TS 38.423 [35]), or "Served Cell Information" (see TS 38.473 [36]), the timing is based on the cell for which the message is included. When the message is included in "NR Neighbour Information" (see TS 36.423 [37]), or "Served Cell Information" (see TS 38.423 [35]), the timing is based on the cell indicated in the "Served NR Cell Information" or "Served Cell Information NR" with which the "NR Neighbour Information" or "Neighbour Information NR" is provided. When the message is included in "CU to DU RRC Information", the timing is based on the cell indicated by SpCell ID with which the message is included. If the field is provided by an NTN cell, the offset (derived from parameter <i>periodicityAndOffset</i>) is based on the assumption that the NTN payload to gNB propagation delay of the cell for which the message is included equals to 0 ms. |
| ss-RSSI-Measurement
Provides the configuration which can be used for RSSI measurements of the cell for which the message is included. |

| MeasurementTimingConfiguration field descriptions |
|---|
| campOnFirstSSB
Value <i>true</i> indicates that the SSB indicated in the first instance of <i>MeasTiming</i> in the <i>measTiming</i> list can be used for camping and for a PCell configuration (i.e. in <i>spCellConfigCommon</i> of the <i>masterCellGroup</i>) and to indicate which neighbour cell SSB is CD-SSB and which one is NCD-SSB in use. |
| csi-RS-CellMobility
Indicates the CSI-RS configuration of the cell for which this message is included. The timing of the CSI-RS resources is based on the SSB indicated by <i>refSSBFreq</i> . |
| csi-RS-SubcarrierSpacing
Indicates the subcarrier spacing of the CSI-RS resources included in <i>csi-rs-CellMobility</i> . |
| measTiming
A list of SMTC information, SSB RSSI measurement information and associated NR frequency exchanged via EN-DC X2 Setup, EN-DC Configuration Update, Xn Setup and NG-RAN Node Configuration Update procedures, or F1 messages between gNB DU and gNB CU. |
| physCellId
Physical Cell Identity of the SSB on the ARFCN indicated by <i>carrierFreq</i> . |
| psCellOnlyOnFirstSSB
Value <i>true</i> indicates that only the SSB indicated in the first instance of <i>MeasTiming</i> in the <i>measTiming</i> list can be used for a PCell configuration (i.e. in <i>spCellConfigCommon</i> of the <i>secondaryCellGroup</i>). |
| ssb-ToMeasure
The set of SS blocks to be measured within the SMTC measurement duration (see TS 38.215 [9]). |

– UERadioPagingInformation

This message is used to transfer radio paging information, covering both upload to and download from the 5GC, and between gNBs.

Direction: gNB to/ from 5GC and gNB to/from gNB

```

| <i>UERadioPagingInformation</i> field descriptions |
|---|
| <i>supportedBandListNRForPaging</i>
Indicates the UE supported NR frequency bands which are derived by the gNB from <i>UE-NR-Capability</i> . |
| <i>dl-SchedulingOffset-PDSCH-TypeA-FDD-FR1</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR1. |
| <i>dl-SchedulingOffset-PDSCH-TypeA-FDD-FR2-NTN</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR2-NTN. |
| <i>dl-SchedulingOffset-PDSCH-TypeA-TDD-FR1</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR1. |
| <i>dl-SchedulingOffset-PDSCH-TypeA-TDD-FR2</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR2. |
| <i>dl-SchedulingOffset-PDSCH-TypeB-FDD-FR1</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR1. |
| <i>dl-SchedulingOffset-PDSCH-TypeB-FDD-FR2-NTN</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR2-NTN. |
| <i>dl-SchedulingOffset-PDSCH-TypeB-TDD-FR1</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR1. |
| <i>dl-SchedulingOffset-PDSCH-TypeB-TDD-FR2</i>
Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR2. |
| <i>halfDuplexFDD-TypeA-RedCap</i>
Indicates whether the (e)RedCap UE only supports half-duplex operation for FDD in the indicated band(s). |
| <i>inactiveStatePO-Determination</i>
Indicates whether the UE supports to use the same <i>i_s</i> to determine PO in RRC_INACTIVE state as in RRC_IDLE state. |
| <i>nesCellIDTX-DRX-PerBand</i>
Indicates whether the UE supports <i>nes-CellIDTX-DRX</i> in the indicated band(s). |
| <i>numberOfRxERedCap</i>
Indicates the number of Rx branches supported by an eRedCap UE. |
| <i>numberOfRxRedCap</i>
Indicates the number of Rx branches supported by a RedCap UE. |
| <i>oneRxE-RedCapPerBand</i>
Indicates whether the eRedCap UE supports 1Rx branch in the indicated band(s) which is derived by the gNB from <i>maxNumberMIMO-LayersPDSCH</i> from <i>UE-NR-Capability</i> . If this field is included, the <i>numberOfRxERedCap-r18</i> may be ignored by a receiving gNB. |
| <i>oneRxRedCapPerBand</i>
Indicates whether the RedCap UE supports 1Rx branch in the indicated band(s) which is derived by the gNB from <i>maxNumberMIMO-LayersPDSCH</i> from <i>UE-NR-Capability</i> . If this field is included, the <i>numberOfRxRedCap-r17</i> may be ignored by a receiving gNB. |
| <i>supportOf2RxXR</i>
Indicates whether the UE is a 2Rx XR UE. |
| <i>twoRxE-RedCapPerBand</i>
Indicates whether the eRedCap UE supports 2Rx branches in the indicated band(s) which is derived by the gNB from <i>maxNumberMIMO-LayersPDSCH</i> from <i>UE-NR-Capability</i> . If this field is included, the <i>numberOfRxERedCap-r18</i> may be ignored by a receiving gNB. |
| <i>twoRxRedCapPerBand</i>
Indicates whether the RedCap UE supports 2Rx branches in the indicated band(s) which is derived by the gNB from <i>maxNumberMIMO-LayersPDSCH</i> from <i>UE-NR-Capability</i> . If this field is included, the <i>numberOfRxRedCap-r17</i> may be ignored by a receiving gNB. |

| |
|---|
| twoRxXR-PerBand |
| Indicates whether the UE supports 2Rx XR in the indicated band(s). If this field is included, the <i>supportOf2RxXR-r18</i> may be ignored by a receiving gNB. |
| ue-RadioPagingInfo |
| The field is used to transfer UE capability information used for paging. The gNB generates the <i>ue-RadioPagingInfo-r17</i> and the contained UE capability information is absent when not supported by the UE. The content of <i>ue-RadioPagingInfo-r19</i> is generated by the UE. |

– *UERadioAccessCapabilityInformation*

This message is used to transfer UE radio access capability information, covering both upload to and download from the 5GC.

Direction: ng-eNB or gNB to/ from 5GC

-- ASN1STOP
```

| <i>UERadioAccessCapabilityInformation-IEs</i> field descriptions |
|---|
| ue-RadioAccessCapabilityInfo |
| Including NR, MR-DC, E-UTRA radio access capabilities. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information. |

11.2.3 Mandatory information in inter-node RRC messages

For the *AS-Config* transferred within the *HandoverPreparationInformation*:

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, except for the fields *sourceSCG-NR-Config*, *sourceSCG-EUTRA-Config* and *sourceRB-SN-Config*, which can be omitted in case the source MN did not receive the latest configuration from the source SN. For *RRCReconfiguration* included in the field *rrcReconfiguration*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;
- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply. I.e. some fields shall be included regardless of the "Need" or "Cond" e.g. *discardTimer*;
- Based on the received AS configuration, the target node can indicate the delta (difference) to the current AS configuration (as included in *HandoverCommand*) to the UE. The fields *newUE-Identity* and *t304* included in *ReconfigurationWithSync* are not used for delta configuration purpose.

The *candidateCellInfoListSN(-EUTRA)* in *CG-Config* and the *candidateCellInfoListMN(-EUTRA)/candidateCellInfoListSN(-EUTRA)* in *CG-ConfigInfo* need not be included in procedures that do not involve a change of node.

For fields *scg-CellGroupConfig*, *scg-CellGroupConfigEUTRA* and *scg-RB-Config* in *CG-Config* (sent upon SN initiated SN change or other conditions as specified in field descriptions) and fields *mcg-RB-Config*, *scg-RB-Config* and *sourceConfigSCG* in *CG-ConfigInfo* (sent upon change of SN):

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, unless stated otherwise in the field description. For *RRCReconfiguration* included in the field *scg-CellGroupConfig* in *CG-Config*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;
- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply;
- Based on the received AS configuration, the target node can indicate the delta (difference) as compared to the current AS configuration to the UE. The fields *newUE-Identity* and *t304* in *ReconfigurationWithSync* are always included by the target node, i.e. they are not used for delta configuration purpose to UE.

For fields in *CG-Config* and *CG-ConfigInfo* listed below, absence of the field means that the receiver maintains the values informed via the previous message. Note that every time there is a change in the configuration covered by a listed field, the MN or SN shall include the field and it shall provide the full configuration provided by that field unless stated otherwise. Otherwise, if there is no change, the field can be omitted:

- *configRestrictInfo*;
- *gapPurpose*;
- *measGapConfig* (for which delta signaling applies);
- *measGapConfigFR2* (for which delta signaling applies);
- *measResultCellListSFTD*;

- *measResultSFTD-EUTRA*;
- *sftdFrequencyList-EUTRA*;
- *sftdFrequencyList-NR*;
- *ue-CapabilityInfo*;
- *servFrequenciesMN-NR*;
- *musim-GapConfigInfo-r18*;
- *musim-CapRestrictionInfo-r18*;
- *ltm-ReferenceConfigurationSCG-r19*;
- *ltm-UE-MeasuredTA-ID-r19*;
- *ltm-ReferenceConfigurationMCG-r19*.

For other fields in CG-Config and CG-ConfigInfo, the sender shall always signal the appropriate value even if same as indicated in the previous inter-node message, unless explicitly stated otherwise.

11.3 Inter-node RRC information element definitions

– *L1-MeasConfigNRDC*

The IE *L1-MeasConfigNRDC* is used to indicate or request a maximum value that can be used by the SN in NR-DC to configure L1 measurement related to LTM at the SCG. Each value is equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise. The value indicated by each field is applicable to all BCs within the field *allowedBC-ListMRDC*.

| L1-MeasConfigNRDC field descriptions |
|--|
| maxCellsSSB-L1-MeasInterFreqSCG
Indicates the maximum number of RRC configured LTM candidate cells inter-frequency L1 measurement. |
| maxCellsSSB-L1-MeasIntraFreqSCG, maxCellL1-CSI-RS-MeasIntraFreqSCG
Indicates the maximum number of RRC configured LTM candidate cells for intra-frequency L1 measurement. |
| maxCellsL1-MeasNoGapSCG
Indicates the maximum number of neighbour cells UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps. |
| maxCellsL1-MeasWithGapSCG
Indicates the maximum number of neighbour cells UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps. |
| maxL1-MeasNoGapSCG
Indicates the maximum number of frequency layers UE can measure for intra- and inter-frequency L1 measurements without measurement gaps. |
| maxL1-MeasWithGapSCG
Indicates the maximum number of frequency layers UE can measure for inter-frequency L1 measurements with measurement gaps. |
| maxReportConfigsAperiodicSSB, maxReportConfigsAperiodicCSI-RS, maxReportConfigsAperiodicSP-CSI-RS
Indicates the maximum number of aperiodic LTM CSI report configurations. |
| maxReportConfigsPeriodicSSB, maxReportConfigsPeriodicCSI-RS
Indicates the maximum number of periodic LTM CSI report configurations. |
| maxReportConfigsSemiPersistentSSB, maxReportConfigsSemiPersistentCSI-RS, maxReportConfigsSemiPersistentSP-CSI-RS
Indicates the maximum number of semi-persistent LTM CSI report configurations. |
| maxResourcesL1-MeasSCG-CSI-RS
Indicates the maximum number of max number of CSI-RS resources for L1-RSRP measurement that UE can measure within a slot. |
| maxSSBsL1-MeasNoGapSCG, maxSSBsL1-MeasNoGapSCGExt
Indicates the maximum number of SSB resources UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps. If the field <i>maxSSBsL1-MeasNoGapSCGExt</i> is included, the field <i>maxSSBsL1-MeasNoGapSCG</i> is not present. |
| maxSSBsL1-MeasWithGapSCG
Indicates the maximum number of SSB resources UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps. |
| maxTotalCellsL1-MeasNoGapSCG
Indicates the maximum total number of cells, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps. |
| maxTotalSSBsL1-MeasNoGapSCG
Indicates the maximum total number of SSB resources, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps. |

– **LTM-ResourceConfigNRDC**

The IE *LTM-ResourceConfigNRDC* is used to indicate or request a maximum value that can be used by the SN in NR-DC to configure LTM related configuration at the SCG e.g., number of TCI states to be configured and activated, and number of LTM candidates on which to trigger the early UL synchronization. Each value is equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise. The value indicated by each field is applicable to all BCs within the field *allowedBC-ListMRDC*.

LTM-ResourceConfigNRDC information element

```
-- ASN1START
-- TAG-LTM-RESOURCECONFIGNRDC-START

LTM-ResourceConfigNRDC-r18 ::= SEQUENCE {
    maxCellsTA-Meas-r18                INTEGER (0..maxNrofCellsTA-Meas-r18)        OPTIONAL,
    maxConfigJointTCI-States-r18       INTEGER (0..maxNrofConfigJointTCI-States-r18)  OPTIONAL,
    maxCellsJointTCI-r18               INTEGER (0..maxNrofCellsTCI-r18)              OPTIONAL,

    maxActivatedUL-TCI-States-r18      INTEGER (0..maxNrofActivatedUL-TCI-States-r18)  OPTIONAL,
    ...
}

-- TAG-LTM-RSOURCECONFIGNRDC-STOP
-- ASN1STOP
```

LTM-ResourceConfigNRDC field descriptions***maxActivatedDL-TCI-States***

Indicates the maximum number of MAC CE activated LTM DL TCI states.

maxActivatedJointTCI-States

Indicates the maximum number of MAC CE activated joint LTM TCI states.

maxActivatedUL-TCI-States

Indicates the maximum number of MAC CE activated LTM UL TCI states.

maxCellsJointTCI

Indicates the maximum number of configured cells for joint LTM TCI state(s).

maxCellsTA-Meas

Indicates the maximum number of candidate cells for TA acquisition based on PDCCH ordered CFRA procedure before receiving cell switch command MAC-CE.

maxCellsTCI

Indicates the maximum number of configured cells for separate DL/UL LTM TCI state(s).

maxConfigCells

Indicates the maximum number of LTM candidate configuration(s) for which the UE can perform early ASN.1 decoding and validity check.

maxConfigDL-TCI-States

Indicates the maximum number of configured separate DL LTM TCI state(s).

maxConfigJointTCI-States

Indicates the maximum number of configured joint LTM TCI state(s).

maxConfigUL-TCI-States

Indicates the maximum number of configured separate UL LTM TCI state(s).

maxStoredConfigCells

Indicates the maximum number of serving cell(s) and candidate cell(s), including serving SpCell(s), serving SCell(s) in SCG, SpCell in LTM candidate configurations and SCell(s) in LTM candidate configurations for SCG.

– ***ResourceConfigNRDC***

The IE is used to indicate or request the maximum values that can be used by the SCG in NR-DC, with each value equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise.

ResourceConfigNRDC field descriptions

fr1-ResourceConfig, fr2-ResourceConfig

Indicates the maximum number of resources that SCG is allowed to configure for FR1/FR2, respectively.

maxNumberResAcrossCC-AcrossFR

Indicates the maximum number of configured CSI-RS resources. Corresponds to the UE capability *maxNumberResAcrossCC-AcrossFR-r16* in *maxTotalResourcesForAcrossFreqRanges-r16*.

ResourceConfigPerFR field descriptions

bm-MaxNumberAperiodicCSI-RS-Resource

Indicates the maximum number of aperiodic CSI-RS resources that the SCG is allowed to configure for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberAperiodicCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.

bm-MaxNumberCSI-RS-Resource

Indicates the maximum total number of NZP-CSI-RS resources that can be configured for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.

cg-MaxNumberConfigsAllCC

Indicates the maximum number of active configured grant configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *activeConfiguredGrant-r16*.

maxNumberCSI-RS-BFD

Indicates the maximal number of different CSI-RS resources for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberCSI-RS-BFD*.

maxNumberCSI-RS-SSB-CBD

Indicates the maximal number of different CSI-RS (and/or SSB) resources for new beam identifications. Corresponds to the UE capability *maxNumberCSI-RS-SSB-CBD*.

maxNumberSSB-BFD

Indicates the maximal number of different SSBs for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberSSB-BFD*.

sps-MaxNumberConfigsAllCC

Indicates the maximum number of SPS configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *sps-r16*.

trs-MaxConfResourceSetsAllCC

Indicates the maximum configured CSI-RS for tracking (i.e. TRS) resource sets. Corresponds to the UE capability *maxConfiguredResourceSetsAllCC* in *csi-RS-ForTracking*.

11.4 Inter-node RRC multiplicity and type constraint values

– Multiplicity and type constraints definitions

```

12 Processing delay requirements for RRC procedures

The UE performance requirements for RRC procedures are specified in the following tables. The performance requirement is expressed as the time in [ms] from the end of reception of the network -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> network response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).

Figure 12.1-1: Illustration of RRC procedure delay

Table 12.1-1: UE performance requirements for RRC procedures for UEs

| Procedure title: | Network -> UE | UE -> Network | Value [ms] | Notes |
|--|------------------------------------|-----------------------------------|----------------|--------------------------------|
| RRC Connection Control Procedures | | | | |
| RRC reconfiguration | <i>RRCReconfiguration</i> | <i>RRCReconfigurationComplete</i> | 10 | |
| RRC reconfiguration (scell addition/release) | <i>RRCReconfiguration</i> | <i>RRCReconfigurationComplete</i> | 16 | |
| RRC reconfiguration (LTE/NR SCG establishment/ modification/ release) | <i>RRCReconfiguration</i> | <i>RRCReconfigurationComplete</i> | 16 | |
| RRC reconfiguration (Intra-NR mobility with LTE/NR SCG establishment/ modification/ release) | <i>RRCReconfiguration</i> | <i>RRCReconfigurationComplete</i> | 16 | |
| RRC reconfiguration | <i>DL DedicatedMessage Segment</i> | <i>RRCReconfigurationComplete</i> | 16+(Nseg-1)*10 | Nseg is number of RRC segments |
| RRC reconfiguration (configurations subject to applicability determination procedure) | <i>RRCReconfiguration</i> | <i>RRCReconfigurationComplete</i> | 16 | |
| RRC setup | <i>RRCSetup</i> | <i>RRCSetupComplete</i> | 10 | |
| RRC Release | <i>RRCRelease</i> | | NA | |
| RRC re-establishment | <i>RRCReestablishment</i> | <i>RRCReestablishmentComplete</i> | 10 | |

| Procedure title: | Network -> UE | UE -> Network | Value [ms] | Notes |
|---|------------------------------------|--------------------------|----------------|--|
| RRC resume | <i>RRCResume</i> | <i>RRCResumeComplete</i> | 6 or 10 | Value=6 applies for a UE supporting reduced CP latency for the case of <i>RRCResume</i> message only including MAC and PHY configuration, reestablishPDCP and reestablishRLC for SRB2, multicast MRB(s) and DRB(s), and no DRX, SPS, configured grant, CA or MIMO re-configuration will be triggered by this message. Further, the UL grant for transmission of <i>RRCResumeComplete</i> and the data is transmitted over common search space with DCI format 0_0. In this scenario, the RRC procedure delay [ms] can extend beyond the reception of the UL grant, up to 7 ms.

For other cases, Value = 10 applies. |
| RRC resume (MCG SCell addition/restoration/release) | <i>RRCResume</i> | <i>RRCResumeComplete</i> | 16 | |
| RRC resume (SCG establishment/restoration/release) | <i>RRCResume</i> | <i>RRCResumeComplete</i> | 16 | |
| RRC resume | <i>DL DedicatedMessage Segment</i> | <i>RRCResumeComplete</i> | 16+(Nseg-1)*10 | Nseg is number of RRC segments |

| Procedure title: | Network -> UE | UE -> Network | Value [ms] | Notes |
|---------------------------------------|---|---|------------------------|--|
| Initial AS security activation | <i>SecurityModeCommand</i> | <i>SecurityModeComplete/SecurityModeFailure</i> | 5 | |
| Inter RAT mobility | | | | |
| Handover to NR | <i>RRCReconfiguration (sent by other RAT)</i> | <i>RRCReconfigurationComplete</i> | NA | The performance of this procedure is specified in TS 36.133 [40] clauses 5.3.4.2, 5.3.4A.2 and 5.3.5.2 in case of handover from E-UTRA to NR. |
| Handover from NR | <i>MobilityFromNRCommand</i> | | NA | The performance of this procedure is specified in TS 38.133 [14], clauses 6.1.2.1.2 and 6.1.2.2.2. |
| Other procedures | | | | |
| UE assistance information | | <i>UEAssistanceInformation</i> | NA | |
| UE capability transfer | <i>UECapabilityEnquiry</i> | <i>UECapabilityInformation</i> | 80 | |
| UE capability transfer | <i>UECapabilityEnquiry</i> | <i>ULDedicatedMessageSegment</i> | 80 | Applicable when UL RRC segmentation is enabled by the field <i>rrc-SegAllowed</i> . |
| UE capability transfer | <i>UECapabilityEnquiry</i> | <i>ULDedicatedMessageSegment</i> | 560+max (0, Nseg-7)*80 | Applicable when UL RRC segmentation is enabled by the field <i>rrc-MaxCapaSegAllowed</i> . Nseg is the value indicated by <i>rrc-MaxCapaSegAllowed</i> . |
| Counter check | <i>CounterCheck</i> | <i>CounterCheckResponse</i> | 5 | |
| UE information | <i>UEInformationRequest</i> | <i>UEInformationResponse</i> | 15 | |
| DL Information transfer MR-DC | <i>DLInformationTransferMRDC</i> | | NA | The UE shall apply the performance requirements of the RRC message included within the <i>DLInformationTransferMRDC</i> message. |
| IAB other information | | <i>IABOtherInformation</i> | NA | |
| Sidelink UE information | | <i>SidelinkUEInformationNR</i> | NA | |
| UE Positioning assistance information | | <i>UEPositioningAssistanceInfo</i> | NA | |

Annex A (informative): Guidelines mainly on use of ASN.1

A.1 Introduction

The following clauses contain guidelines for the specification of RRC protocol data units (PDUs) with ASN.1.

A.2 Procedural specification

A.2.1 General principles

The procedural specification provides an overall high level description regarding the UE behaviour in a particular scenario.

It should be noted that most of the UE behaviour associated with the reception of a particular field is covered by the applicable parts of the PDU specification. The procedural specification may also include specific details of the UE behaviour upon reception of a field, but typically this should be done only for cases that are not easy to capture in the PDU clause e.g. general actions, more complicated actions depending on the value of multiple fields.

Likewise, the procedural specification need not specify the UE requirements regarding the setting of fields within the messages that are sent to the network i.e. this may also be covered by the PDU specification.

A.2.2 More detailed aspects

The following more detailed conventions should be used:

- Bullets:
 - Capitals should be used in the same manner as in other parts of the procedural text i.e. in most cases no capital applies since the bullets are part of the sentence starting with 'The UE shall:'
 - All bullets, including the last one in a clause, should end with a semi-colon i.e. an ';'.
- Conditions:
 - Whenever multiple conditions apply, a semi-colon should be used at the end of each conditions with the exception of the last one, i.e. as in 'if cond1, or cond2.'

A.3 PDU specification

A.3.1 General principles

A.3.1.1 ASN.1 clauses

The RRC PDU contents are formally and completely described using abstract syntax notation (ASN.1), see X.680 [6], X.681 [7].

The complete ASN.1 code is divided into a number of ASN.1 clauses in the specifications. In order to facilitate the extraction of the complete ASN.1 code from the specification, each ASN.1 clause begins with the following:

- a first text paragraph consisting entirely of an *ASN.1 start tag*, which consists of a double hyphen followed by a single space and the text string "ASN1START" (in all upper case letters);
- a second text paragraph consisting entirely of a *block start tag* is included, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-START" (in all upper case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters).

Similarly, each ASN.1 clause ends with the following:

- a first text paragraph consisting entirely of a *blockstop tag*, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-STOP" (in all upper-case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters);
- a second text paragraph consisting entirely of an *ASN.1 stop tag*, which consists of a double hyphen followed by a singlespace and the text "ASN1STOP" (in all upper case letters).

This results in the following tags:

```
-- ASN1START
-- TAG-NAME-START

-- TAG-NAME-STOP
-- ASN1STOP
```

The text paragraphs containing either of the start and stop tags should not contain any ASN.1 code significant for the complete description of the RRC PDU contents. The complete ASN.1 code may be extracted by copying all the text paragraphs between an ASN.1 start tag and the following ASN.1 stop tag in the order they appear, throughout the specification.

NOTE: A typical procedure for extraction of the complete ASN.1 code consists of a first step where the entire RRC PDU contents description (ultimately the entire specification) is saved into a plain text (ASCII) file format, followed by a second step where the actual extraction takes place, based on the occurrence of the ASN.1 start and stop tags.

A.3.1.2 ASN.1 identifier naming conventions

The naming of identifiers (i.e., the ASN.1 field and type identifiers) should be based on the following guidelines:

- Message (PDU) identifiers should be ordinary mixed case without hyphenation. These identifiers, *e.g.*, the *RRConnectionModificationCommand*, should be used for reference in the procedure text. Abbreviations should be avoided in these identifiers and abbreviated forms of these identifiers should not be used.
- Type identifiers other than PDU identifiers should be ordinary mixed case, with hyphenation used to set off acronyms only where an adjacent letter is a capital, *e.g.*, *EstablishmentCause*, *SelectedPLMN* (not *Selected-PLMN*, since the "d" in "Selected" is lowercase), *InitialUE-Identity* and *MeasSFN-SFN-TimeDifference*.
- Field identifiers shall start with a lowercase letter and use mixed case thereafter, *e.g.*, *establishmentCause*. If a field identifier begins with an acronym (which would normally be in upper case), the entire acronym is lowercase (*plmn-Identity*, not *pLMN-Identity*). The acronym is set off with a hyphen (*ue-Identity*, not *ueIdentity*), in order to facilitate a consistent search pattern with corresponding type identifiers.
- Identifiers should convey the meaning of the identifier and should avoid adding unnecessary postfixes (e.g. abstractions like 'Info') for the name.
- Identifiers that are likely to be keywords of some language, especially widely used languages, such as C++ or Java, should be avoided to the extent possible.
- Identifiers, other than PDU identifiers, longer than 25 characters should be avoided where possible. It is recommended to use abbreviations, which should be done in a consistent manner i.e. use 'Meas' instead of 'Measurement' for all occurrences. Examples of typical abbreviations are given in table A.3.1.2.1-1 below.
- *For future extension:* When an extension is introduced a suffix is added to the identifier of the concerned ASN.1 field and/or type. A suffix of the form "-rX" is used, with X indicating the release, for ASN.1 fields or types introduced in a later release (i.e. a release later than the original/first release of the protocol) as well as for ASN.1 fields or types for which a revision is introduced in a later release replacing a previous version, *e.g.*, *Foo-r9* for the Rel-9 version of the ASN.1 type *Foo*. A suffix of the form "-rXb" is used for the first revision of a field that it appears in the same release (X) as the original version of the field, "-rXc" for a second intra-release revision and so on. A suffix of the form "-vXYZ" is used for ASN.1 fields or types that only are an extension of a corresponding earlier field or type (see clause A.4), *e.g.*, *AnElement-v10b0* for the extension of the ASN.1 type *AnElement* introduced in version 10.11.0 of the specification. A number 0...9, 10, 11, *etc.* is used to represent the first part of the version number, indicating the release of the protocol. Lower case letters *a*, *b*, *c*, *etc.* are used to represent the second (and third) part of the version number if they are greater than 9. In the procedural specification, in field descriptions as well as in headings suffices are not used, unless there is a clear need to distinguish the extension from the original field.
- More generally, in case there is a need to distinguish different variants of an ASN.1 field or IE, a suffix should be added at the end of the identifiers *e.g.* *MeasObjectUTRA*, *ConfigCommon*. When there is no particular need to distinguish the fields (*e.g.* because the field is included in different IEs), a common field identifier name may be used. This may be attractive *e.g.* in case the procedural specification is the same for the different variants.
- It should be avoided to use field identifiers with the same name within the elements of a CHOICE, including using a CHOICE inside a SEQUENCE (to avoid certain compiler errors).

Table A.3.1.2-1: Examples of typical abbreviations used in ASN.1 identifiers

| Abbreviation | Abbreviated word |
|--------------|------------------------|
| Config | Configuration |
| DL | Downlink |
| Ext | Extension |
| Freq | Frequency |
| Id | Identity |
| Ind | Indication |
| Meas | Measurement |
| MIB | MasterInformationBlock |
| Neigh | Neighbour(ing) |
| Param(s) | Parameter(s) |
| Phys | Physical |
| PCI | Physical Cell Id |
| Proc | Process |
| Reconfig | Reconfiguration |
| Reest | Re-establishment |
| Req | Request |
| Rx | Reception |
| Sched | Scheduling |
| SIB | SystemInformationBlock |
| Sync | Synchronisation |
| Thr | Threshold |
| Tx | Transmission |
| UL | Uplink |

NOTE: The table A.3.1.2.1-1 is not exhaustive. Additional abbreviations may be used in ASN.1 identifiers when needed.

A.3.1.3 Text references using ASN.1 identifiers

A text reference into the RRC PDU contents description from other parts of the specification is made using the ASN.1 field identifier of the referenced type. The ASN.1 field and type identifiers used in text references should be in the *italic font style*. The "do not check spelling and grammar" attribute in Word should be set. Quotation marks (i.e., "") should not be used around the ASN.1 field or type identifier.

A reference to an RRC PDU should be made using the corresponding ASN.1 field identifier followed by the word "message", e.g., a reference to the *RRCRelease* message.

A reference to a specific part of an RRC PDU, or to a specific part of any other ASN.1 type, should be made using the corresponding ASN.1 field identifier followed by the word "field", e.g., a reference to the *prioritisedBitRate* field in the example below.

```
-- /example/ ASN1START
```

```

LogicalChannelConfig ::=
    ul-SpecificParameters
        priority
        prioritisedBitRate
        bucketSizeDuration
        logicalChannelGroup
    } OPTIONAL
-- ASN1STOP

```

NOTE: All the ASN.1 start tags in the ASN.1 clauses, used as examples in this annex to the specification, are deliberately distorted, in order not to include them when the ASN.1 description of the RRC PDU contents is extracted from the specification.

A reference to a specific type of information element should be made using the corresponding ASN.1 type identifier preceded by the acronym "IE", e.g., a reference to the IE *LogicalChannelConfig* in the example above.

References to a specific type of information element should only be used when those are generic, i.e., without regard to the particular context wherein the specific type of information element is used. If the reference is related to a particular context, e.g., an RRC PDU type (message) wherein the information element is used, the corresponding field identifier in that context should be used in the text reference.

A reference to a specific value of an ASN.1 field should be made using the corresponding ASN.1 value without using quotation marks around the ASN.1 value, e.g., 'if the *status* field is set to value *true*'.

A.3.2 High-level message structure

Within each logical channel type, the associated RRC PDU (message) types are alternatives within a CHOICE, as shown in the example below.

```

-- /example/ ASN1START

DL-DCCH-Message ::= SEQUENCE {
    message DL-DCCH-MessageType
}

DL-DCCH-MessageType ::= CHOICE {
    c1 CHOICE {
        dlInformationTransfer DLInformationTransfer,
        handoverFromEUTRAPreparationRequest HandoverFromEUTRAPreparationRequest,
        mobilityFromEUTRACCommand MobilityFromEUTRACCommand,
        rrcConnectionReconfiguration RRCConnectionReconfiguration,
        rrcConnectionRelease RRCConnectionRelease,
        securityModeCommand SecurityModeCommand,
        ueCapabilityEnquiry UECapabilityEnquiry,
        spare1 NULL
    },
    messageClassExtension SEQUENCE {}
}

```

```
}
-- ASN1STOP
```

A nested two-level CHOICE structure is used, where the alternative PDU types are alternatives within the inner level *c1* CHOICE.

Spare alternatives (i.e., *spare1* in this case) may be included within the *c1* CHOICE to facilitate future extension. The number of such spare alternatives should not extend the total number of alternatives beyond an integer-power-of-two number of alternatives (i.e., eight in this case).

Further extension of the number of alternative PDU types is facilitated using the *messageClassExtension* alternative in the outer level CHOICE.

A.3.3 Message definition

Each PDU (message) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START

RRCConnectionReconfiguration ::= SEQUENCE {
    rrc-TransactionIdentifier      RRC-TransactionIdentifier,
    criticalExtensions             CHOICE {
        c1                       CHOICE {
            rrcConnectionReconfiguration-r8      RRCConnectionReconfiguration-r8-IEs,
            spare3 NULL, spare2 NULL, spare1 NULL
        },
        criticalExtensionsFuture SEQUENCE {}
    }
}

RRCConnectionReconfiguration-r8-IEs ::= SEQUENCE {
    -- Enter the IEs here.
    ...
}

-- ASN1STOP
```

Hooks for *critical* and *non-critical* extension should normally be included in the PDU type specification. How these hooks are used is further described in clause A.4.

Critical extensions are characterised by a redefinition of the PDU contents and need to be governed by a mechanism for protocol version agreement between the encoder and the decoder of the PDU, such that the encoder is prevented from sending a critically extended version of the PDU type, which is not comprehended by the decoder.

Critical extension of a PDU type is facilitated by a two-level CHOICE structure, where the alternative PDU contents are alternatives within the inner level *c1* CHOICE. Spare alternatives (i.e., *spare3* down to *spare1* in this case) may be included within the *c1* CHOICE. The number of spare alternatives to be included in the original PDU specification should be decided case by case, based on the expected rate of critical extension in the future releases of the protocol.

Further critical extension, when the spare alternatives from the original specifications are used up, is facilitated using the *criticalExtensionsFuture* in the outer level CHOICE.

In PDU types where critical extension is not expected in the future releases of the protocol, the inner level *c1* CHOICE and the spare alternatives may be excluded, as shown in the example below.

```
-- /example/ ASN1START

RRCConnectionReconfigurationComplete ::= SEQUENCE {
    rrc-TransactionIdentifier      RRC-TransactionIdentifier,
    criticalExtensions              CHOICE {
        rrcConnectionReconfigurationComplete-r8
        RRCConnectionReconfigurationComplete-r8-IEs,
        criticalExtensionsFuture    SEQUENCE {}
    }
}

RRCConnectionReconfigurationComplete-r8-IEs ::= SEQUENCE {
    -- Enter the fields here.
    ...
}

-- ASN1STOP
```

Non-critical extensions are characterised by the addition of new information to the original specification of the PDU type. If not comprehended, a non-critical extension may be skipped by the decoder, whilst the decoder is still able to complete the decoding of the comprehended parts of the PDU contents.

Non-critical extensions at locations other than the end of the message or other than at the end of a field contained in a BIT or OCTET STRING are facilitated by use of the ASN.1 extension marker "...". The original specification of a PDU type should normally include the extension marker at the end of the sequence of information elements contained.

Non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING may be facilitated by use of an empty sequence that is marked OPTIONAL e.g. as shown in the following example:

```
-- /example/ ASN1START

RRCTestMessage-r8-IEs ::=
    SEQUENCE {
        field1      InformationElement1,
        field2      InformationElement2,
        nonCriticalExtension    SEQUENCE {} OPTIONAL
    }

-- ASN1STOP
```

The ASN.1 clause specifying the contents of a PDU type may be followed by a *field description* table where a further description of, e.g., the semantic properties of the fields may be included. The general format of this table is shown in the example below. The field description table is absent in case there are no fields for which further description

needs to be provided e.g. because the PDU does not include any fields, or because an IE is defined for each field while there is nothing specific regarding the use of this IE that needs to be specified.

| %PDU-TypeIdentifier% field descriptions | |
|---|--------------------|
| %field identifier% | Field description. |
| %field identifier% | Field description. |

The field description table has one column. The header row shall contain the ASN.1 type identifier of the PDU type.

The following rows are used to provide field descriptions. Each row shall include a first paragraph with a *field identifier* (in ***bold and italic*** font style) referring to the part of the PDU to which it applies. The following paragraphs at the same row may include (in regular font style), e.g., semantic description, references to other specifications and/or specification of value units, which are relevant for the particular part of the PDU.

The parts of the PDU contents that do not require a field description shall be omitted from the field description table.

A.3.4 Information elements

Each IE (information element) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START

PRACH-ConfigSIB ::=
    rootSequenceIndex
    prach-ConfigInfo
}

PRACH-Config ::=
    rootSequenceIndex
    prach-ConfigInfo
}

PRACH-ConfigInfo ::=
    prach-ConfigIndex
    highSpeedFlag
    zeroCorrelationZoneConfig
}

SEQUENCE {
    INTEGER (0..1023),
    PRACH-ConfigInfo
}

SEQUENCE {
    INTEGER (0..1023),
    PRACH-ConfigInfo
} OPTIONAL -- Need N

SEQUENCE {
    ENUMERATED {ffs},
    ENUMERATED {ffs},
    ENUMERATED {ffs}
}

-- ASN1STOP
```

IEs should be introduced whenever there are multiple fields for which the same set of values apply. IEs may also be defined for other reasons e.g. to break down a ASN.1 definition in to smaller pieces.

A group of closely related IE type definitions, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in this example, are preferably placed together in a common ASN.1 clause. The IE type identifiers should in this case have a common base, defined as the *generic type identifier*. It may be complemented by a suffix to distinguish the different variants. The "*PRACH-Config*" is the generic type identifier in this example, and the "*SIB*" suffix is added to distinguish the variant. The clause heading and generic references to a group of closely related IEs defined in this way should use the generic type identifier.

The same principle should apply if a new version, or an extension version, of an existing IE is created for *critical* or *non-critical* extension of the protocol (see clause A.4). The new version, or the extension version, of the IE is included in the same ASN.1 clause defining the original. A suffix is added to the type identifier, using the naming conventions defined in clause A.3.1.2, indicating the release or version of the where the new version, or extension version, was introduced.

Local IE type definitions, like the IE *PRACH-ConfigInfo* in the example above, may be included in the ASN.1 clause and be referenced in the other IE types defined in the same ASN.1 clause. The use of locally defined IE types should be encouraged, as a tool to break up large and complex IE type definitions. It can improve the readability of the code. There may also be a benefit for the software implementation of the protocol end-points, as these IE types are typically provided by the ASN.1 compiler as independent data elements, to be used in the software implementation.

An IE type defined in a local context, like the IE *PRACH-ConfigInfo*, should not be referenced directly from other ASN.1 clauses in the RRC specification. An IE type which is referenced in more than one ASN.1 clause should be defined in a separate clause, with a separate heading and a separate ASN.1 clause (possibly as one in a set of closely related IE types, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in the example above). Such IE types are also referred to as 'global IEs'.

NOTE: Referring to an IE type, that is defined as a local IE type in the context of another ASN.1 clause, does not generate an ASN.1 compilation error. Nevertheless, using a locally defined IE type in that way makes the IE type definition difficult to find, as it would not be visible at an outline level of the specification. It should be avoided.

The ASN.1 clause specifying the contents of one or more IE types, like in the example above, may be followed by a *field description* table, where a further description of, e.g., the semantic properties of the fields of the information elements may be included. This table may be absent, similar as indicated in clause A.3.3 for the specification of the PDU type. The general format of the *field description* table is the same as shown in clause A.3.3 for the specification of the PDU type.

A.3.5 Fields with optional presence

A field with optional presence may be declared with the keyword **DEFAULT**. It identifies a default value to be assumed, if the sender does not include a value for that field in the encoding:

```
-- /example/ ASN1START

PreambleInfo ::=
    numberOfRA-Preambles          SEQUENCE {
        ...                      INTEGER (1..64)          DEFAULT 1,
    }

-- ASN1STOP
```

Alternatively, a field with optional presence may be declared with the keyword **OPTIONAL**. It identifies a field for which a value can be omitted. The omission carries semantics, which is different from any normal value of the field:

```
-- /example/ ASN1START
PRACH-Config ::=
    rootSequenceIndex
    prach-ConfigInfo
}
SEQUENCE {
    INTEGER (0..1023),
    PRACH-ConfigInfo
OPTIONAL -- Need N
-- ASN1STOP
```

The semantics of an optionally present field, in the case it is omitted, should be indicated at the end of the paragraph including the keyword OPTIONAL, using a short comment text with a need code. The need code includes the keyword "Need", followed by one of the predefined semantics tags (S, M, N or R) defined in clause 6.1. If the semantics tag S is used, the semantics of the absent field are further specified either in the field description table following the ASN.1 clause, or in procedure text.

The addition of OPTIONAL keywords for capability groups is based on the following guideline. If there is more than one field in the lower level IE, then OPTIONAL keyword is added at the group level. If there is only one field in the lower level IE, OPTIONAL keyword is not added at the group level.

A.3.6 Fields with conditional presence

A field with conditional presence is declared with the keyword OPTIONAL. In addition, a short comment text shall be included at the end of the paragraph including the keyword OPTIONAL. The comment text includes the keyword "Cond", followed by a condition tag associated with the field ("UL" in this example):

```
-- /example/ ASN1START
LogicalChannelConfig ::=
    ul-SpecificParameters
    priority
    ...
}
SEQUENCE {
    SEQUENCE {
        INTEGER (0),
    }
OPTIONAL -- Cond UL
-- ASN1STOP
```

When conditionally present fields are included in an ASN.1 clause, the field description table after the ASN.1 clause shall be followed by a *conditional presence* table. The conditional presence table specifies the conditions for including the fields with conditional presence in the particular ASN.1 clause.

| Conditional presence | Explanation |
|----------------------|--|
| UL | Specification of the conditions for including the field associated with the condition tag = "UL". Semantics in case of optional presence under certain conditions may also be specified. |

The conditional presence table has two columns. The first column (heading: "Conditional presence") contains the condition tag (in *italic* font style), which links the fields with a condition tag in the ASN.1 clause to an entry in the table. The second column (heading: "Explanation") contains a text specification of the conditions and requirements for the

presence of the field. The second column may also include semantics, in case of an optional presence of the field, under certain conditions i.e. using the same predefined tags as defined for optional fields in A.3.5.

Conditional presence should primarily be used when presence of a field depends on the presence and/or value of other fields within the same message. If the presence of a field depends on whether another feature/function has been configured, while this function can be configured independently e.g. by another message and/or at another point in time, the relation is best reflected by means of a statement in the field description table.

If the ASN.1 clause does not include any fields with conditional presence, the conditional presence table shall not be included.

Whenever a field is only applicable in specific cases e.g. TDD, use of conditional presence should be considered.

A.3.7 Guidelines on use of lists with elements of SEQUENCE type

Where an information element has the form of a list (the SEQUENCE OF construct in ASN.1) with the type of the list elements being a SEQUENCE data type, an information element shall be defined for the list elements even if it would not otherwise be needed.

For example, a list of PLMN identities with reservation flags is defined as in the following example:

```
-- /example/ ASN1START

PLMN-IdentityInfoList ::=          SEQUENCE (SIZE (1..6)) OF PLMN-IdentityInfo

PLMN-IdentityInfo ::=             SEQUENCE {
    plmn-Identity                 PLMN-Identity,
    cellReservedForOperatorUse    ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```

rather than as in the following (bad) example, which may cause generated code to contain types with unpredictable names:

```
-- /bad example/ ASN1START

PLMN-IdentityList ::=             SEQUENCE (SIZE (1..6)) OF SEQUENCE {
    plmn-Identity                 PLMN-Identity,
    cellReservedForOperatorUse    ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```

A.3.8 Guidelines on use of parameterised SetupRelease type

The usage of the parameterised *SetupRelease* type is like a function call in programming languages where the element type parameter is passed as a parameter. The parameterised type only implies a textual change in abstract syntax where all references to the parameterised type are replaced by the compiler with the release/setup choice. Two examples of the usage are shown below:

```
-- /example/ ASN1START

RRCMesage-rX-IEs ::= SEQUENCE {
    field-rX          SetupRelease { IE-rX }          OPTIONAL,      -- Need M
    ...
}

RRCMesage-rX-IEs ::= SEQUENCE {
    field-rX          SetupRelease { Element-rX }      OPTIONAL,      -- Need M
}

Element-rX ::= SEQUENCE {
    field1-rX          IE1-rX,
    field2-rX          IE2-rX          OPTIONAL        -- Need N
}
OPTIONAL,      -- Need M

-- /example/ ASN1STOP
```

The *SetupRelease* is always be used with only named IEs, i.e. the example below is not allowed:

```
-- /example/ ASN1START

RRCMesage-rX-IEs ::= SEQUENCE {
    field-rX          SetupRelease { SEQUENCE {      -- Unnamed SEQUENCES are not allowed!
        field1-rX      IE1-rX,
        field2-rX      IE2-rX          OPTIONAL      -- Need N
    }
}
OPTIONAL,      -- Need M

-- /example/ ASN1STOP
```

Typically, a field defined using the parameterized *SetupRelease* type does not require procedural or field description text that refers to the *setup* or *release* values. If such a field anyway requires procedural text for specific actions, the field is referred to using the values defined for the type itself, namely, "setup" and "release". For example, procedural text for field-rX above could be as follows:

1> if *field-rX* is set to "setup":

2> do something;

1> else (*field-rX* is set to "release"):

2> release *field-rX* (if appropriate).

A.3.9 Guidelines on use of ToAddModList and ToReleaseList

In order to benefit from delta signalling when modifying lists with many and/or large elements, so-called add/mod- and release- lists should be used. Instead of a single list containing all elements of the list, the ASN.1 provides two lists. One list is used to convey the actual elements that are to be added to the list or modified in the list. The second list conveys only the identities (IDs) of the list elements that are to be released from the list. In other words, the ASN.1 defines only means to signal modifications to a list maintained in the receiver (typically the UE). An example is provided below:

```
-- /example/ ASN1START

AnExampleIE ::= SEQUENCE {
    elementsToAddModList SEQUENCE (SIZE (1..maxNrofElements)) OF Element OPTIONAL, -- Need N
    elementsToReleaseList SEQUENCE (SIZE (1..maxNrofElements)) OF ElementId OPTIONAL, -- Need N
    ...
}

Element ::= SEQUENCE {
    elementId ElementId,
    aField INTEGER (0..16777215),
    anotherField OCTET STRING,
    ...
}

ElementId ::= INTEGER (0..maxNrofElements-1)

maxNrofElements INTEGER ::= 50
maxNrofElements-1 INTEGER ::= 49

-- /example/ ASN1STOP
```

As can be seen, the elements of the list must contain an identity (INTEGER) that identifies the elements unambiguously upon addition, modification and removal. It is recommended to define an IE for that identifier (here *ElementId*) so that it can be used both for a field inside the element as well as in the *elementsToReleaseList*.

Both lists should be made OPTIONAL and flagged as "Need N". The need code reflects that the UE does not maintain the received lists as such but rather updates its configuration using the information therein. In other words, it is not possible to provide via delta signalling an update to a previously signalled *elementsToAddModList* or *elementsToReleaseList* (which Need M would imply). The update is always in relation to the UE's internal configuration.

Note that the release of a field (a list element as well as any other field) releases all its sub-fields (sub-fields configured by *elementsToAddModList* and any other sub-field).

If no procedural text is provided for a set of *ToAddModList* and *ToReleaseList*, the following generic procedure applies:

The UE shall:

- 1> for each *ElementId* in the *elementsToReleaseList*,:
 - 2> if the current UE configuration includes an *Element* with the given *ElementId*:
 - 3> release the *Element* from the current UE configuration;
- 1> for each *Element* in the *elementsToAddModList*:
 - 2> if the current UE configuration includes an *Element* with the given *ElementId*:
 - 3> modify the configured *Element* in accordance with the received *Element*;
- 2> else:
 - 3> add received *Element* to the UE configuration.

A.3.10 Guidelines on use of lists (without ToAddModList and ToReleaseList)

As per clause 6.1.3, when using lists without the ToAddModList and ToReleaseList structure, the contents of the lists are always replaced. To illustrate this, an example is provided below:

```
-- /example/ ASN1START
-- TAG_EXAMPLE_LISTS_START

AnExampleIE ::=
    SEQUENCE {
        elementList          SEQUENCE (SIZE (1..maxNrofElements)) OF Element          OPTIONAL,  -- Need M
        ...,
        [[
            elementListExt-v2030 SEQUENCE (SIZE (1..maxNrofElementsExt)) OF Element    OPTIONAL,  -- Need M
        ]]
    }

Element ::=
    SEQUENCE {
        useFeatureX          BOOLEAN,
        aField               INTEGER (0..127)
        anotherField         INTEGER (0..127)
        ...
    }

maxNrofElements          INTEGER ::= 8
maxNrofElements-1       INTEGER ::= 7
maxNrofElementsExt       INTEGER ::= 8
maxNrofElementsExt-1     INTEGER ::= 7

-- TAG_EXAMPLE_LISTS_STOP
```

```
-- /example/ ASN1STOP
```

As can be seen, the *elementList* list itself uses Need M, but each list entry *Element* contains mandatory, Need M and Need R fields. If the list is first signalled to UE with 3 entries, and subsequently again with 2 entries, UE shall retain only the latter list, i.e. the list with 2 elements will completely replace the list with 3 elements. That also means that the field *aField* will be treated as if it was newly created, i.e. network must include it if it wishes UE to utilize the field even if it was previously signalled. This also implies that the Need M field (*aField*) will be treated in the same way as the Need R field (*anotherField*), i.e. delta signalling is not applied and the network has to signal the field to ensure UE does not release the value (which is why Need M should not normally be used in the entries of these lists).

A.4 Extension of the PDU specifications

A.4.1 General principles to ensure compatibility

It is essential that extension of the protocol does not affect interoperability i.e. it is essential that implementations based on different versions of the RRC protocol are able to interoperate. In particular, this requirement applies for the following kind of protocol extensions:

- Introduction of new PDU types (i.e. these should not cause unexpected behaviour or damage).
- Introduction of additional fields in an extensible PDUs (i.e. it should be possible to ignore uncomprehended extensions without affecting the handling of the other parts of the message).
- Introduction of additional values of an extensible field of PDUs. If used, the behaviour upon reception of an uncomprehended value should be defined.

It should be noted that the PDU extension mechanism may depend on the logical channel used to transfer the message e.g. for some PDUs an implementation may be aware of the protocol version of the peer in which case selective ignoring of extensions may not be required.

The non-critical extension mechanism is the primary mechanism for introducing protocol extensions i.e. the critical extension mechanism is used merely when there is a need to introduce a 'clean' message version. Such a need appears when the last message version includes a large number of non-critical extensions, which results in issues like readability, overhead associated with the extension markers. The critical extension mechanism may also be considered when it is complicated to accommodate the extensions by means of non-critical extension mechanisms.

A.4.2 Critical extension of messages and fields

The mechanisms to critically extend a message are defined in A.3.3. There are both "outer branch" and "inner branch" mechanisms available. The "outer branch" consists of a CHOICE having the name *criticalExtensions*, with two values, *c1* and *criticalExtensionsFuture*. The *criticalExtensionsFuture* branch consists of an empty SEQUENCE, while the *c1* branch contains the "inner branch" mechanism.

The "inner branch" structure is a CHOICE with values of the form "*MessageName-rX-IEs*" (e.g., "*RRCConnectionReconfiguration-r8-IEs*") or "*spareX*", with the spare values having type NULL. The "*-rX-IEs*" structures contain the *complete* structure of the message IEs for the appropriate release; i.e., the critical extension branch for the Rel-10 version of a message includes all Rel-8 and Rel-9 fields (that are not obviated in the later version), rather than containing only the additional Rel-10 fields.

The following guidelines may be used when deciding which mechanism to introduce for a particular message, i.e. only an 'outer branch', or an 'outer branch' in combination with an 'inner branch' including a certain number of spares:

- For certain messages, e.g. initial uplink messages, messages transmitted on a broadcast channel, critical extension may not be applicable.
- An outer branch may be sufficient for messages not including any fields.
- The number of spares within inner branch should reflect the likelihood that the message will be critically extended in future releases (since each release with a critical extension for the message consumes one of the spare values). The estimation of the critical extension likelihood may be based on the number, size and changeability of the fields included in the message.
- In messages where an inner branch extension mechanism is available, all spare values of the inner branch should be used before any critical extensions are added using the outer branch.

The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release

```
-- /example/ ASN1START          -- Original release

RRCMessage ::=
    rrc-TransactionIdentifier
    criticalExtensions
        c1
            rrcMessage-r8
            spare3 NULL, spare2 NULL, spare1 NULL
        },
    criticalExtensionsFuture
    }
}

-- ASN1STOP
```

```
-- /example/ ASN1START          -- Later release

RRCMessage ::=
    rrc-TransactionIdentifier
    criticalExtensions
        c1
            rrcMessage-r8
            rrcMessage-r10
            rrcMessage-r11
            rrcMessage-r14
        },
    later
        c2
            rrcMessage-r16
            spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
            spare3 NULL, spare2 NULL, spare1 NULL
```

```
        },
        criticalExtensionsFuture      SEQUENCE {}
    }
}

-- ASN1STOP
```

It is important to note that critical extensions may also be used at the level of individual fields i.e. a field may be replaced by a critically extended version. When sending the extended version, the original version may also be included (e.g. original field is mandatory, E-UTRAN is unaware if UE supports the extended version). In such cases, a UE supporting both versions may be required to ignore the original field. The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release.

```
-- /example/ ASN1START          -- Original release

RRCMessage ::=
    rrc-TransactionIdentifier      SEQUENCE {
    criticalExtensions              CHOICE {
        c1
            rrcMessage-r8
            spare3 NULL, spare2 NULL, spare1 NULL
        },
        criticalExtensionsFuture    SEQUENCE {}
    }
}

RRCMessage-rN-IEs ::= SEQUENCE {
    field1-rN                      ENUMERATED {
        value1, value2, value3, value4}    OPTIONAL, -- Need N
    field2-rN                      InformationElement2-rN    OPTIONAL, -- Need N
    nonCriticalExtension            RRCConnectionReconfiguration-vMxy-IEs    OPTIONAL
}

RRCConnectionReconfiguration-vMxy-IEs ::= SEQUENCE {
    field2-rM                      InformationElement2-rM    OPTIONAL, -- Cond NoField2rN
    nonCriticalExtension            SEQUENCE {}                OPTIONAL
}

-- ASN1STOP
```

| Conditional presence | Explanation |
|----------------------|--|
| NoField2rN | The field is optionally present, need N, if field2-rN is absent. Otherwise the field is absent |

Finally, it is noted that a critical extension may be introduced in the same release as the one in which the original field was introduced e.g. to correct an essential ASN.1 error. In such cases a UE capability may be introduced, to assist the network in deciding whether or not to use the critical extension.

In the case of list fields (SEQUENCE OF types in ASN.1) using the ToAddMod/ToRelease construction, the use of critical extensions to increase the size of a list should be avoided; that is, replacing the original list field by a new field also used to signal entries previously covered by the original field (i.e. extensions done according to the following example) should be avoided:

```
-- /example/ ASN1START          -- Discouraged example
ContainingStructure ::=
  listElementToAddModList      SEQUENCE {
    ...                        SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement    OPTIONAL,    -- Need N
    [[
      listElementToAddModList-rN SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElement    OPTIONAL    -- Need N
    ]]
  }-- ASN1STOP
```

Instead, a non-critical list extension mechanism should typically be used, such that the extension field only adds the new entries of the list. This approach is further described in clause A.4.3.6.

If the critical extension mechanism for a list is used, it should be clarified in the field description that the two versions of the list are not configured together, and that the network should release the contents of the original version when configuring the replacement version.

A.4.3 Non-critical extension of messages

A.4.3.1 General principles

The mechanisms to extend a message in a non-critical manner are defined in A.3.3. W.r.t. the use of extension markers, the following additional guidelines apply:

- When further non-critical extensions are added to a message that has been critically extended, the inclusion of these non-critical extensions in earlier critical branches of the message should be avoided when possible.
- The extension marker ("...") is the primary non-critical extension mechanism that is used but empty sequences may be used if length determinant is not required. Examples of cases where a length determinant is not required:
 - at the end of a message;
 - at the end of a structure contained in a BIT STRING or OCTET STRING.
- When an extension marker is available, non-critical extensions are preferably placed at the location (e.g. the IE) where the concerned parameter belongs from a logical/functional perspective (referred to as the '*default extension location*').
- It is desirable to aggregate extensions of the same release or version of the specification into a group, which should be placed at the lowest possible level.
- In specific cases it may be preferable to place extensions elsewhere (referred to as the '*actual extension location*') e.g. when it is possible to aggregate several extensions in a group. In such a case, the group should be placed at the lowest suitable level in the message.

- In case placement at the default extension location affects earlier critical branches of the message, locating the extension at a following higher level in the message should be considered.
- In case an extension is not placed at the default extension location, an IE should be defined. The IE's ASN.1 definition should be placed in the same ASN.1 clause as the default extension location. In case there are intermediate levels in-between the actual and the default extension location, an IE may be defined for each level. Intermediate levels are primarily introduced for readability and overview. Hence intermediate levels need not always be introduced e.g. they may not be needed when the default and the actual extension location are within the same ASN.1 clause.

A.4.3.2 Further guidelines

Further to the general principles defined in the previous clause, the following additional guidelines apply regarding the use of extension markers:

- Extension markers within SEQUENCE:
 - Extension markers are primarily, but not exclusively, introduced at the higher nesting levels.
 - Extension markers are introduced for a SEQUENCE comprising several fields as well as for information elements whose extension would result in complex structures without it (e.g. re-introducing another list).
 - Extension markers are introduced to make it possible to maintain important information structures e.g. parameters relevant for one particular RAT.
 - Extension markers are also used for size critical messages (i.e. messages on BCCH, BR-BCCH, PCCH and CCCH), although introduced somewhat more carefully.
 - The extension fields introduced (or frozen) in a specific version of the specification are grouped together using double brackets.
- Extension markers within ENUMERATED:
 - Spare values may be used until the number of values reaches the next power of 2, while the extension marker caters for extension beyond that limit, given that the use of spare values in a later Release is possible without any error cases.
 - A suffix of the form "vXYZ" is used for the identifier of each new value, e.g. "value-vXYZ".
- Extension markers within CHOICE:
 - Extension markers are introduced when extension is foreseen and when comprehension is not required by the receiver i.e. behaviour is defined for the case where the receiver cannot comprehend the extended value (e.g. ignoring an optional CHOICE field). It should be noted that defining the behaviour of a receiver upon receiving a not comprehended choice value is not required if the sender is aware whether or not the receiver supports the extended value.
 - A suffix of the form "vXYZ" is used for the identifier of each new choice value, e.g. "choice-vXYZ".

Non-critical extensions at the end of a message/ of a field contained in an OCTET or BIT STRING:

- When a nonCriticalExtension is actually used, a "Need" code should not be provided for the field, which always is a group including at least one extension and a field facilitating further possible extensions. For simplicity, it is recommended not to provide a "Need" code when the field is not actually used either.

Further, more general, guidelines:

- In case a need code is not provided for a group, a "Need" code is provided for all individual extension fields within the group i.e. including for fields that are not marked as OPTIONAL. The latter is to clarify the action upon absence of the whole group.

A.4.3.3 Typical example of evolution of IE with local extensions

The following example illustrates the use of the extension marker for a number of elementary cases (sequence, enumerated, choice). The example also illustrates how the IE may be revised in case the critical extension mechanism is used.

NOTE In case there is a need to support further extensions of release n while the ASN.1 of release (n+1) has been frozen, without requiring the release n receiver to support decoding of release (n+1) extensions, more advanced mechanisms are needed e.g. including multiple extension markers.

```
-- /example/ ASN1START

InformationElement1 ::=
    field1
    field2
        field2a
        field2b
        ...,
        field2c-v960
    },
    ...,
    [[
        field3-r9
    ]],
    [[
        field3-v9a0
        field4-r9
    ]]
}

InformationElement1-r10 ::=
    field1
    field2
        field2a
        field2b
        field2c-v960
        ...,
        field2d-v12b0
    },
    SEQUENCE {
        ENUMERATED {
            value1, value2, value3, value4-v880,
            ..., value5-v960 },
        CHOICE {
            BOOLEAN,
            InformationElement2b,
            InformationElement2c-r9
        }
    }

    InformationElement3-r9 OPTIONAL -- Need R
    InformationElement3-v9a0 OPTIONAL, -- Need R
    InformationElement4 OPTIONAL -- Need R

SEQUENCE {
    ENUMERATED {
        value1, value2, value3, value4-v880,
        value5-v960, value6-v1170, spare2, spare1, ... },
    CHOICE {
        BOOLEAN,
        InformationElement2b,
        InformationElement2c-r9,
        INTEGER (0..63)
    }
}
```

```

    },
    field3-r9          InformationElement3-r10    OPTIONAL, -- Need R
    field4-r9          InformationElement4        OPTIONAL, -- Need R
    field5-r10         BOOLEAN,
    field6-r10         InformationElement6-r10    OPTIONAL, -- Need R
    ...,
    [[
    field3-v1170       InformationElement3-v1170  OPTIONAL  -- Need R
    ]]
}
-- ASN1STOP

```

Some remarks regarding the extensions of *InformationElement1* as shown in the above example:

- The *InformationElement1* is initially extended with a number of non-critical extensions. In release 10 however, a critical extension is introduced for the message using this IE. Consequently, a new version of the IE *InformationElement1* (i.e. *InformationElement1-r10*) is defined in which the earlier non-critical extensions are incorporated by means of a revision of the original field.
- The *value4-v880* is replacing a spare value defined in the original protocol version for *field1*. Likewise *value6-v1170* replaces *spare3* that was originally defined in the r10 version of *field1*.
- Within the critically extended release 10 version of *InformationElement1*, the names of the original fields/IEs are not changed, unless there is a real need to distinguish them from other fields/IEs. E.g. the *field1* and *InformationElement4* were defined in the original protocol version (release 8) and hence not tagged. Moreover, the *field3-r9* is introduced in release 9 and not re-tagged; although, the *InformationElement3* is also critically extended and therefore tagged *InformationElement3-r10* in the release 10 version of *InformationElement1*.

A.4.3.4 Typical examples of non critical extension at the end of a message

The following example illustrates the use of non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING i.e. when an empty sequence is used.

```

-- /example/ ASN1START
RRCTest-r8-IEs ::= SEQUENCE {
    field1          InformationElement1,
    field2          InformationElement2,
    field3          InformationElement3        OPTIONAL, -- Need N
    nonCriticalExtension RRCMessage-v860-IEs
}

RRCTest-v860-IEs ::= SEQUENCE {
    field4-v860     InformationElement4        OPTIONAL, -- Need S
    field5-v860     BOOLEAN                    OPTIONAL, -- Cond C54
    nonCriticalExtension RRCMessage-v940-IEs
}

```

```

}
RRCMessage-v940-IEs ::= SEQUENCE {
    field6-v940          InformationElement6-r9          OPTIONAL, -- Need R
    nonCriticalExtensions SEQUENCE {}                   OPTIONAL
}
-- ASN1STOP

```

Some remarks regarding the extensions shown in the above example:

- The *InformationElement4* is introduced in the original version of the protocol (release 8) and hence no suffix is used.

A.4.3.5 Examples of non-critical extensions not placed at the default extension location

The following example illustrates the use of non-critical extensions in case an extension is not placed at the default extension location.

– *ParentIE-WithEM*

The IE *ParentIE-WithEM* is an example of a high level IE including the extension marker (EM). The root encoding of this IE includes two lower level IEs *ChildIE1-WithoutEM* and *ChildIE2-WithoutEM* which not include the extension marker. Consequently, non-critical extensions of the Child-IEs have to be included at the level of the Parent-IE.

The example illustrates how the two extension IEs *ChildIE1-WithoutEM-vNx0* and *ChildIE2-WithoutEM-vNx0* (both in release N) are used to connect non-critical extensions with a default extension location in the lower level IEs to the actual extension location in this IE.

***ParentIE-WithEM* information element**

```

-- /example/ ASN1START
ParentIE-WithEM ::= SEQUENCE {
    -- Root encoding, including:
    childIE1-WithoutEM      ChildIE1-WithoutEM          OPTIONAL, -- Need N
    childIE2-WithoutEM      ChildIE2-WithoutEM          OPTIONAL, -- Need N
    ...,
    [
        childIE1-WithoutEM-vNx0      ChildIE1-WithoutEM-vNx0  OPTIONAL, -- Need N
        childIE2-WithoutEM-vNx0      ChildIE2-WithoutEM-vNx0  OPTIONAL, -- Need N
    ]
}
-- ASN1STOP

```

Some remarks regarding the extensions shown in the above example:

- The fields *childIE1-WithoutEM-vNx0* may not really need to be optional (depends on what is defined at the next lower level).
- In general, especially when there are several nesting levels, fields should be marked as optional only when there is a clear reason.

– *ChildIE1-WithoutEM*

The IE *ChildIE1-WithoutEM* is an example of a lower level IE, used to control certain radio configurations including a configurable feature which can be setup or released using the local IE *ChIE1-ConfigurableFeature*. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature. The example is based on the following assumptions:

- When initially configuring as well as when modifying the new field, the original fields of the configurable feature have to be provided also i.e. as if the extended ones were present within the setup branch of this feature.
- When the configurable feature is released, the new field should be released also.
- When omitting the original fields of the configurable feature the UE continues using the existing values (which is used to optimise the signalling for features that typically continue unchanged upon handover).
- When omitting the new field of the configurable feature the UE releases the existing values and discontinues the associated functionality (which may be used to support release of unsupported functionality upon handover to an eNB supporting an earlier protocol version).

The above assumptions, which affect the use of conditions and need codes, may not always apply. Hence, the example should not be re-used blindly.

ChildIE1-WithoutEM information element

```
-- /example/ ASN1START

ChildIE1-WithoutEM ::=          SEQUENCE {
    -- Root encoding, including:
    chIE1-ConfigurableFeature    ChIE1-ConfigurableFeature    OPTIONAL    -- Need N
}

ChildIE1-WithoutEM-vNx0 ::=    SEQUENCE {
    chIE1-ConfigurableFeature-vNx0    ChIE1-ConfigurableFeature-vNx0    OPTIONAL    -- Cond ConfigF
}

ChIE1-ConfigurableFeature ::=    CHOICE {
    release        NULL,
    setup          SEQUENCE {
        -- Root encoding
    }
}

ChIE1-ConfigurableFeature-vNx0 ::= SEQUENCE {
    chIE1-NewField-rN        INTEGER (0..31)
}
```

-- ASN1STOP

| Conditional presence | Explanation |
|----------------------|--|
| ConfigF | The field is optional present, need R, in case of chIE1-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field. |

– ChildIE2-WithoutEM

The IE *ChildIE2-WithoutEM* is an example of a lower level IE, typically used to control certain radio configurations. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature.

ChildIE2-WithoutEM information element

```
-- /example/ ASN1START
ChildIE2-WithoutEM ::=
    CHOICE {
        release
        setup
        -- Root encoding
    }
ChildIE2-WithoutEM-vNx0 ::=
    SEQUENCE {
        chIE2-NewField-rN
    }
-- ASN1STOP
```

| Conditional presence | Explanation |
|----------------------|--|
| ConfigF | The field is optional present, need R, in case of chIE2-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field. |

A.4.3.6 Non-critical extensions of lists with ToAddMod/ToRelease

When the size of a list using the ToAddMod/ToRelease construction is extended and/or fields are added to the list element structure, the list should be non-critically extended in accordance with the following general principles:

- When only the size of the list is extended, this extension is reflected in a non-critical extension of the list, with a "SizeExt" suffix added to the end of the field name (before the -vNx suffix). The differential size of the extended list uses the suffix "Diff". A new ToRelease list is needed, and its range should include only the increase in list size. In many cases, extending the list size will also require an extended list element ID type to account for the increased size of the list; in these cases the element type will need to be extended to include the extended element ID, resulting in a more complex extension (see example 3 for further discussion of this case). The field

description table should indicate that the UE considers the original list and the extension list as a single list; thus entries added with the original list can be modified by the extension list (or removed by the extension of the ToRelease list), or vice versa. The result is as shown in the following example:

```
-- /example 1/ ASN1START

ContainingStructure ::=
    listElementToAddModList      SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement      OPTIONAL,      -- Need N
    listElementToReleaseList     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId     OPTIONAL,      -- Need N
    ...,
    [[
        -- Non-critical extension lists
        listElementToAddModListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement      OPTIONAL,      -- Need N
        listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId     OPTIONAL      -- Need N
    ]]
}
-- ASN1STOP
```

- When fields are added to the list element structure, an extension marker should normally be used if available. If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields, with the suffix "Ext" added to the end of the field name and the element structure type name (before the -vNxy suffix), and a parallel ToAddMod list introduced to hold the new structures, also with the "Ext" suffix. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the original list. No new ToRelease list is typically needed (unless the list element ID type changes). It should typically be ensured that the contained fields in the "Ext" elements are releasable without release and add of the entire list element; this can, for instance, be ensured by having the new fields be OPTIONAL Need R. If multiple extensions of the same list are needed, the version suffix should distinguish the lists (e.g. *listElementToAddModListExt-vNwz* added after *listElementToAddModListExt-vNxy*). The result is as shown in the following example:

```
-- /example 2/ ASN1START

ContainingStructure ::=
    listElementToAddModList      SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement      OPTIONAL,      -- Need N
    listElementToReleaseList     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId     OPTIONAL,      -- Need N
    ...,
    [[
        -- Parallel list
        listElementToAddModListExt-vNxy SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNxy OPTIONAL      -- Need N
    ]],
    [[
        -- Second parallel list from a later spec version
        listElementToAddModListExt-vNwz SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNwz OPTIONAL      -- Need N
    ]]
}

ListElement ::=
    elementId      ListElementId,
    field1          INTEGER (0..3),
    field2          ENUMERATED { value1, value2, value3 }
```

```

}

ListElementExt-vNxy ::=                SEQUENCE {
    field3-rN                        BIT STRING (SIZE (8))                OPTIONAL    -- Need R
}

ListElementExt-vNwz ::=                SEQUENCE {
    field4-rN                        INTEGER (0..255)                    OPTIONAL    -- Need R
}
-- ASN1STOP

```

- When the size of a list is extended and fields are added to the list element structure, an extension marker should normally be used for the added fields if available, and the list extended with the non-critical mechanism as described in example 1 above. Note that if the list element ID type changes in this case, the new ID can be added after the extension marker, and the entries of the size-extended ToRelease list should have the type of the new ID (e.g. *ListElementId-vNxy*). If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields and a parallel list with ToAddMod introduced to hold the extension structures, as in the second example above, for entries of the original list and for entries of the extension list holding new entries. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the concatenation of the original list and the extension list. An extended ToRelease list is needed, but no additional parallel ToRelease list is needed (i.e. there is no *listElementToReleaseListExt-vNxy* in the example below), as the original and extended ToRelease lists suffice to release any element of the combined list. The extended element ID type should be captured as a non-critical extension of the original element ID type, with the field description indicating that if the extended ID is present, the original ID is ignored. The result is as shown in the following example:

```

-- /example 3/ ASN1START

ContainingStructure ::=                SEQUENCE {
    listElementToAddModList            SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement    OPTIONAL,    -- Need N
    listElementToReleaseList            SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId    OPTIONAL,    -- Need N
    ...
    [
        -- Non-critical extension lists
        listElementToAddModListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement    OPTIONAL,    -- Need N
        listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNxy    OPTIONAL,    -- Need N
        -- Parallel list with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
        listElementToAddModListExt-vNxy SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElementExt-vNxy    OPTIONAL    -- Need N
    ]
}

ListElement ::=                SEQUENCE {
    elementId                        ListElementId,
    field1                        INTEGER (0..3),
    field2                        ENUMERATED { value1, value2, value3 }
}

ListElementExt-vNxy ::=                SEQUENCE {
    -- Field description should indicate that if the elementId-vNxy is present, the elementId (without suffix) is ignored
    elementId-vNxy                        ListElementId-vNxy                OPTIONAL,    -- Need S
    field3-rN                        BIT STRING (SIZE (8))                OPTIONAL    -- Need R
}

```

```

}

ListElementId ::= INTEGER (0..maxNrofListElements-1)

ListElementId-vNxy ::= INTEGER (maxNrofListElements..maxNrofListElements-1-rN)
-- ASN1STOP

```

- When different extensions are made to a list in separate releases, the extension mechanisms described above may interact. In case fields are added in Rel-M (*listElementToAddModListExt-vMxy*) and later the list size is extended in Rel-N (*listElementToAddModListSizeExt-vNwz*), the size-extended list in Rel-N should be a single list extending the combination of *listElementToAddModList* and *listElementToAddModListExt-vMxy*. This requires creating a new type (*ListElement-rN*) to contain the combined fields of *ListElement* and *ListElementExt-vMxy*. A corresponding ToRelease list is needed. The result is as shown in the following example:

```

-- /example 4/ ASN1START

ContainingStructure ::=
    listElementToAddModList          SEQUENCE {
    listElementToReleaseList          SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement          OPTIONAL,          -- Need N
    ...,
    [[
    -- Parallel list (Rel-M)
    listElementToAddModListExt-vMxy    SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vMxy    OPTIONAL          -- Need N
    ]],
    [[
    -- Size-extended list (Rel-N) with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
    listElementToAddModListSizeExt-vNwz SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement-rN    OPTIONAL,          -- Need N
    listElementToReleaseListSizeExt-vNwz SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNwz    OPTIONAL          -- Need N
    ]]
    }

ListElement ::=
    elementId          ListElementId,
    field1              INTEGER (0..3),
    field2              ENUMERATED { value1, value2, value3 }
    }

ListElementExt-vMxy ::=
    field3-rM          BIT STRING (SIZE (8))          OPTIONAL          -- Need R
    }

ListElement-rN ::=
    elementId-vNwz      ListElementId-vNwz,
    field1              INTEGER (0..3),
    field2              ENUMERATED { value1, value2, value3 },
    field3-rN          BIT STRING (SIZE (8))          OPTIONAL          -- Need R
    }

ListElementId ::= INTEGER (0..maxNrofListElements-1)

```

```
ListElementId-vNwz ::= INTEGER (maxNrofListElements..maxNrofListElementsDiff-1-rN)  
-- ASN1STOP
```

A.5 Guidelines regarding inclusion of transaction identifiers in RRC messages

The following rules provide guidance on which messages should include a Transaction identifier

- 1: DL messages on CCCH that move UE to RRC-Idle should not include the RRC transaction identifier.
- 2: All network initiated DL messages by default should include the RRC transaction identifier.
- 3: All UL messages that are direct response to a DL message with an RRC Transaction identifier should include the RRC Transaction identifier.
- 4: All UL messages that require a direct DL response message should include an RRC transaction identifier.
- 5: All UL messages that are not in response to a DL message nor require a corresponding response from the network should not include the RRC Transaction identifier.

A.6 Guidelines regarding use of need codes

The following rule provides guidance for determining need codes for optional downlink fields:

- if the field needs to be stored by the UE (i.e. maintained) when absent:
 - use Need M (=Maintain);
- else, if the field needs to be released by the UE when absent:
 - use Need R (=Release);
- else, if UE shall take no action when the field is absent (i.e. UE does not even need to maintain any existing value of the field):
 - use Need N (=None);
- else (UE behaviour upon absence does not fit any of the above conditions):
 - use Need S (=Specified);
 - specify the UE behaviour upon absence of the field in the procedural text or in the field description table.

A.7 Guidelines regarding use of conditions

Conditions are primarily used to specify network restrictions, for which the following types can be distinguished:

- Message Contents related constraints e.g. that a field B is mandatory present if the same message includes field A and when it is set value X.
- Configuration Constraints e.g. that a field D can only be signalled if field C is configured and set to value Y. (i.e. regardless of whether field C is present in the same message or previously configured).

The use of these conditions is illustrated by an example.

```
-- /example/ ASN1START
RRCMessage-IEs ::= SEQUENCE {
    fieldA          FieldA          OPTIONAL, -- Need M
    fieldB          FieldB          OPTIONAL, -- Cond FieldAsetToX
    fieldC          FieldC          OPTIONAL, -- Need M
    fieldD          FieldD          OPTIONAL, -- Cond FieldCsetToY
    nonCriticalExtension SEQUENCE {} OPTIONAL
}
-- /example/ ASN1STOP
```

| Conditional presence | Explanation |
|----------------------|--|
| FieldAsetToX | The field is mandatory present if fieldA is included and set to valueX. Otherwise the field is optionally present, need R. |
| FieldCsetToY | The field is optionally present, need M, if fieldC is configured and set to valueY. Otherwise the field is absent and the UE does not maintain the value |

A.8 Miscellaneous

The following miscellaneous convention should be used:

- UE capabilities: TS 38.306 [26] specifies that the network should in general respect the UE's capabilities. Hence there is no need to include statement clarifying that the network, when setting the value of a certain configuration field, shall respect the related UE capabilities unless there is a particular need e.g. particularly complicated cases.
- UE capabilities: If a UE capability for a feature requires at least FR1/FR2 or at least FDD/TDD differentiation, it is defined in per band signaling (under *BandNR* in *RF-Parameters*) in the ASN.1, i.e. no new UE capabilities is defined in the FR1/FR2 and FDD/TDD differentiation capability signaling branches.

Annex B (informative): RRC Information

B.1 Protection of RRC messages

The following list provides information which messages can be sent (unprotected) prior to AS security activation and which messages can be sent unprotected after AS security activation. Those messages indicated "-" in "P" column should never be sent unprotected by gNB or UE. Further requirements are defined in the procedural text.

P...Messages that can be sent (unprotected) prior to AS security activation

A – I...Messages that can be sent without integrity protection after AS security activation

A – C...Messages that can be sent unciphered after AS security activation

NA... Message can never be sent after AS security activation

| Message | P | A-I | A-C | Comment |
|---------------------------------------|--------|-----|-----|---|
| <i>CounterCheck</i> | - | - | - | |
| <i>CounterCheckResponse</i> | - | - | - | |
| <i>DedicatedSIBRequest</i> | + | - | - | |
| <i>DLDedicatedMessageSegment</i> | NOTE 1 | | | |

B.2 Description of BWP configuration options

There are two possible ways to configure BWP#0 (i.e. the initial BWP) for a UE:

- 1) Configure *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon*, but do not configure dedicated configurations in *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.
- 2) Configure both *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* and configure dedicated configurations in at least one of *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.

The same way of configuration is used for UL BWP#0 and DL BWP#0 if both are configured.

With the first option (illustrated by figure B2-1 below), the BWP#0 is not considered to be an RRC-configured BWP, i.e., UE only supporting one BWP can still be configured with BWP#1 in addition to BWP#0 when using this configuration. The BWP#0 can still be used even if it does not have the dedicated configuration, albeit in a more limited manner since only the SIB1-defined configurations are available. For example, only DCI format 1_0 can be used with BWP#0 without dedicated configuration, so changing to another BWP requires RRCReconfiguration since DCI format 1_0 doesn't support DCI-based switching.

Figure B2-1: BWP#0 configuration without dedicated configuration

With the second option (illustrated by figure B2-2 below), the BWP#0 is considered to be an RRC-configured BWP, i.e. UE only supporting one BWP cannot be configured with BWP#1 in addition to BWP#0 when using this configuration. However, UE supporting more than one BWP can still switch to and from BWP#0 e.g. via DCI normally, and there are no explicit limitations to using the BWP#0 (compared to the first option).

Figure B2-2: BWP#0 configuration with dedicated configuration

For BWP#0, the *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* should match the parameters configured by MIB and SIB1 (if provided) in the corresponding serving cell.

If an RedCap-specific initial DL BWP is configured, for BWP switching, the BWP #0 always maps to the RedCap-specific initial DL BWP. If a RedCap-specific initial UL BWP is configured, for BWP switching on NUL, the BWP #0 always maps to the RedCap-specific initial UL BWP, for BWP switching on SUL, the BWP#0 always maps to the initial UL BWP.

Annex C (normative):List of CRs Containing Early Implementable Features and Corrections

This annex lists the Change Requests (CRs) whose changes may be implemented by a UE of an earlier release than which the CR was approved in (i.e. CRs that contain on their coversheets the sentence "Implementation of this CR from Rel-N will not cause interoperability issues").

Table C-1: List of CRs Containing Early Implementable Features and Corrections

| TDoc Number (RP-xxxxxx): CR Title | CR Number(s) | CR Revision Number(s) | Earliest Implementable Release | Additional Information |
|---|--------------|-----------------------|--------------------------------|--|
| RP-200335: Correction on usage of access category 2 for UAC for RNA update | 1141 | 2 | Release 15 | |
| RP-201185: Introduction of signalling for high-speed train scenarios | 1464 | 5 | Release 15 | |
| RP-201216: Release-16 UE capabilities based on RAN1, RAN4 feature lists and RAN2 | 1665 | 2 | Release 15 | Early implementation part is referring to the aspect covered by <ul style="list-style-type: none"> - R2-2006203: Extension of CSI-RS capabilities per codebook type - R2-2006360: Intraband EN_DC power class expansion for 29 dBm |

| RP-252924: Introduction of 7MHz channel bandwidth | 5308 | 4 | Release 18 | |
| RP-252788: Introduction of less than 5MHz in NTN | 5389 | 2 | Release 18 | |
| RP-253741: Correction on PC5 Relay RLC channel configuration | 5510 | 3 | Release 17 | |

Annex D (normative): UE requirements on ASN.1 comprehension

This clause specifies UE requirements regarding the ASN.1 transfer syntax support, i.e. the ASN.1 definitions to be comprehended by the UE.

A UE that indicates release X in field *accessStratumRelease* shall comprehend the entire transfer syntax (ASN.1) of release X, in particular at least the first version upon ASN.1 freeze. The UE is however not required to support dedicated signalling related transfer syntax associated with optional features it does not support.

In case a UE that indicates release X in field *accessStratumRelease* supports a feature specified in release Y, which is later than release X, (i.e. early UE implementation) additional requirements apply. The UE obviously also has to support the ASN.1 parts related to indicating support of the feature (in UE capabilities).

Critical extensions (dedicated signaling)

If the early implemented feature involves one or more critical extensions in dedicated signalling, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early. This, in particular, concerns the ASN.1 parts related to configuration of the feature.

If configuration of an early implemented feature introduced in release Y involves a message or field that has been critically extended, the UE shall support configuration of all features supported by the UE that are associated with sub-fields of this critical extension. Apart from the early implemented feature(s), the UE needs, however, not to support functionality beyond what is defined in the release the UE indicates in access stratum release.

Let's consider the example of a UE indicating value X in field *accessStratumRelease* that supports the features A1, A3, and A5, associated with fields *fieldA1*, *fieldA3* and *fieldA5* of *InformationElementA* (see ASN.1 below).

The feature A5 implemented early is associated with *fieldA5*, and can only be configured by the –rY version of *InformationElementA*. In such case, the UE should support configuration of all the features A1, A3 and A5 associated with fields *fieldA1*, *fieldA3* and *fieldA5* by the –rY version of *InformationElementA*.

If, however, one of the features was modified, e.g. the feature A3 associated with *fieldA3*, the network should assume the UE only supports the feature A3 according to the release it indicated in field *accessStratumRelease* (i.e. X).

The UE is neither required to support the additional code-point (*n80-vY0*) nor the additional sub-field (*fieldA3c-rY*).

```
InformationElementA-rX ::=      SEQUENCE {
    fieldA1-rX                InformationElementA1-rX          OPTIONAL,  -- Need N
    fieldA2-rX                InformationElementA2-rX          OPTIONAL,  -- Need R
    fieldA3-rX                InformationElementA3-rX          OPTIONAL,  -- Need R
}

InformationElementA-rY ::=      SEQUENCE {
    fieldA1-rY                InformationElementA1-rX          OPTIONAL,  -- Need N
    fieldA2-rY                InformationElementA2-rX          OPTIONAL,  -- Need R
    fieldA3-rY                InformationElementA3-rY          OPTIONAL,  -- Need R
    fieldA4-rY                InformationElementA4-rY          OPTIONAL,  -- Need R
    fieldA5-rY                InformationElementA5-rY          OPTIONAL,  -- Need R
}
```

```

InformationElementA3-rX ::= SEQUENCE {
    fieldA3a-rX      InformationElementA3a-rX      OPTIONAL,    -- Need N
    fieldA3b-rX      ENUMERATED {n10, n20, n40}     OPTIONAL    -- Need R
}

InformationElementA3-rY ::= SEQUENCE {
    fieldA3a-rY      InformationElementA3a-rX      OPTIONAL,    -- Need N
    fieldA3b-rY      ENUMERATED {n10, n20, n40, n80-vY0} OPTIONAL,    -- Need R
    fieldA3c-rY      InformationElementA3c-rY      OPTIONAL    -- Need R
}

```

Non-critical extensions (dedicated and broadcast signaling)

If the early implemented feature involves one or more non-critical extensions, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early.

If the early implemented feature involves one or more non-critical extensions in dedicated signaling, the network does not include extensions introduced after the release X that are not the parts related to the feature which the UE indicates early support of in UE capabilities. The UE shall anyway comprehend the parts of the transfer syntax (ASN.1) which indicate absence of such extensions.

If the early implemented feature involves one or more non-critical extensions in system information, the SIB(s) containing the release Y fields related to the early implemented features may also include other extensions introduced after the release X that are not the parts related to the feature which the UE supports. The UE shall comprehend such intermediate fields (but again is not required to support the functionality associated with these intermediate fields, in case this concerns optional features not supported by the UE).

|--|--------|-----------|------|---|---|---|--------|
| | RP-110 | RP-253716 | 5557 | 1 | A | Correction on setting timeSinceCHO-Reconfig when the failure is due to RLF | 19.1.0 |
| | RP-110 | RP-253718 | 5558 | 3 | A | Correction on the execution of SCG LTM | 19.1.0 |
| | RP-110 | RP-253726 | 5559 | 3 | F | Corrections for Network Energy Saving | 19.1.0 |
| | RP-110 | RP-253733 | 5560 | 2 | F | Corrections on SONMDT features | 19.1.0 |
| | RP-110 | RP-253722 | 5561 | 4 | F | Corrections to AIML for NR air interface | 19.1.0 |
| | RP-110 | RP-253720 | 5563 | 2 | A | Correction to SI reception by remote UE for multi path | 19.1.0 |
| | RP-110 | RP-253718 | 5564 | 1 | A | Corrections on validation of reported idle/inactive and reselection measurements | 19.1.0 |
| | RP-110 | RP-253734 | 5566 | - | B | Introduction of Rx BSF optimization for NR RRM Ph5 | 19.1.0 |
| | RP-110 | RP-253720 | 5568 | 1 | A | Correction on UE capability for UTW in positioning SRS frequency hopping in 38331-r19 | 19.1.0 |
| | RP-110 | RP-253716 | 5573 | 1 | A | Correction on previousPSCellId in SCGFailureInformation | 19.1.0 |
| | RP-110 | RP-253740 | 5574 | 2 | F | [S058][B002] Correction to TN to NTN redirection [NR_TN_NTN_redir] | 19.1.0 |
| | RP-110 | RP-253716 | 5583 | - | A | Correction on uac-BarringFactorForAI3 absence case [MINT] | 19.1.0 |
| | RP-110 | RP-253719 | 5585 | 2 | A | Correction on NCD-SSB based RACH-less HO [RACH-lessHO] | 19.1.0 |
| | RP-110 | RP-253719 | 5586 | 1 | A | Correction on pdcp-Config for SRB4 and SRB5 | 19.1.0 |
| | RP-110 | RP-253740 | 5587 | 1 | B | Introduction of early CSI acquisition for L3 handover [EarlyCSI_L3HO] | 19.1.0 |
| | RP-110 | RP-253744 | 5590 | 2 | B | Updates of Rel-19 UE capability, including [Simul_SRSCS], [Common_PDCCH_rep_TN], [Pos_SRSHop] | 19.1.0 |
| | RP-110 | RP-253718 | 5592 | 1 | A | Misc corrections for LTM and SCPAC | 19.1.0 |
| | RP-110 | RP-253728 | 5593 | 2 | F | Corrections on RRC for mobility enhancements Phase 4 | 19.1.0 |
| | RP-110 | RP-253741 | 5594 | 3 | F | Clarification of SSB-less SCell | 19.1.0 |
| | RP-110 | RP-253741 | 5597 | 1 | F | Miscellaneous non-controversial corrections Set XXVI | 19.1.0 |
| | RP-110 | RP-253717 | 5599 | 1 | A | Correction on SPR triggering threshold | 19.1.0 |
| | RP-110 | RP-253716 | 5602 | 1 | A | Clarification on TA report in NR NTN | 19.1.0 |
| | RP-110 | RP-253740 | 5604 | 2 | B | NR-NTN to NB-IoT NTN Cell Selection [IoT_NR_NTN_CellSelect] | 19.1.0 |
| | RP-110 | RP-253721 | 5606 | - | A | Correction on uplink power control for Type-1 CG-PUSCH [PL RS Type 1 CG] | 19.1.0 |
| | RP-110 | RP-253716 | 5609 | 2 | A | Clarification on Epoch time of neighbour cells | 19.1.0 |
| | RP-110 | RP-253720 | 5612 | 1 | A | Correction on measurement results in indirect path failure information | 19.1.0 |
| | RP-110 | RP-253740 | 5615 | - | B | Adding Mobility State in RRC_CONNECTED [SpeedStatePars] | 19.1.0 |
| | RP-110 | RP-253744 | 5618 | 2 | F | Corrections on eventD2 (Rel-19) | 19.1.0 |
| | RP-110 | RP-253719 | 5619 | 1 | A | Correction on QoE reporting | 19.1.0 |
| | RP-110 | RP-253719 | 5622 | - | A | Clarification of supported band pairs for UL TX switching | 19.1.0 |
| | RP-110 | RP-253729 | 5627 | 2 | F | Further corrections to NR NTN Phase 3 | 19.1.0 |
